Guide to Books in Print ,1984 **Bring the World to the Child** Katie Day Good, 2020-02-11 How long before the advent of

computers and the internet educators used technology to help students become media literate future ready and world minded citizens Today educators technology leaders and policy makers promote the importance of global wired and multimodal learning efforts to teach young people to become engaged global citizens and skilled users of media often go hand in hand But the use of technology to bring students into closer contact with the outside world did not begin with the first computer in a classroom In this book Katie Day Good traces the roots of the digital era s connected learning and global classrooms to the first half of the twentieth century when educators adopted a range of media and materials including lantern slides bulletin boards radios and film projectors as what she terms technologies of global citizenship Good describes how progressive reformers in the early twentieth century made a case for deploying diverse media technologies in the classroom to promote cosmopolitanism and civic minded learning To bring the world to the child these reformers praised not only new mechanical media including stereoscopes photography and educational films but also humbler forms of media created by teachers and children including scrapbooks peace pageants and pen pal correspondence The goal was a mediated cosmopolitanism teaching children to look outward onto a fast changing world and inward at their own national greatness Good argues that the public school system became a fraught site of global media reception production and exchange in American life teaching children to engage with cultural differences while reinforcing hegemonic ideas about race citizenship and US world relations
