Making Decisions About Liability And Insurance:

Making Decisions About Liability And Insurance Colin F. Camerer, Howard Kunreuther, 2012-12-06 Two related trends have created novel challenges for managing risk in the United States The first trend is a series of dramatic changes in liability law as tort law has expanded to assign liability to defendants for reasons other than negligence The unpredictability of future costs induced by changes in tort law may be partly responsible for the second major trend known as the liability crisis the disappearance of liability protection in markets for particularly unpredictable risks This book examines decisions people make about insurance and liability An understanding of such decision making may help explain why the insurance crisis resulted from the new interpretations of tort law and what to do about it The articles cover three kinds of decisions consumer decisions to purchase insurance insurer decisions about coverage they offer and the decisions of the public about the liability rules they prefer which are reflected in legislation and regulation For each of these three kinds of decisions normative theories such as expected utility theory can be used as benchmarks against which actual decisions are judged

Choices, Values, and Frames Daniel Kahneman, Amos Tversky, 2000-09-25 This book presents the definitive exposition of prospect theory a compelling alternative to the classical utility theory of choice Building on the 1982 volume *Judgement Under Uncertainty* this book brings together seminal papers on prospect theory from economists decision theorists and psychologists including the work of the late Amos Tversky whose contributions are collected here for the first time While remaining within a rational choice framework prospect theory delivers more accurate empirically verified predictions in key test cases as well as helping to explain many complex real world puzzles In this volume it is brought to bear on phenomena as diverse as the principles of legal compensation the equity premium puzzle in financial markets and the number of hours that New York cab drivers choose to drive on rainy days Theoretically elegant and empirically robust this volume shows how prospect theory has matured into a new science of decision making
