Mis In Action:

Information Systems for Emergency Management Bartel Van De Walle, Murray Turoff, Starr Roxanne Hiltz, 2014-12-18
This book provides the most current and comprehensive overview available today of the critical role of information systems in emergency response and preparedness. It includes contributions from leading scholars, practitioners, and industry researchers and covers all phases of disaster management: mitigation, preparedness, response, and recovery. Foundational chapters provide a design framework and review ethical issues. Context chapters describe the characteristics of individuals and organizations in which EMIS are designed and studied. Case Study chapters include systems for distributed microbiology laboratory diagnostics to detect possible epidemics or bioterrorism; humanitarian MIS and response coordination systems. Systems Design and Technology chapters cover simulation, geocollaborative systems, global disaster impact analysis, and environmental risk analysis. Throughout the book, the editors and contributors give special emphasis to the importance of assessing the practical usefulness of new information systems for supporting emergency preparedness and response rather than drawing conclusions from a theoretical understanding of the potential benefits of new technologies. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise is the collected effort of more than 50 authors and represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors. Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors, the entire field has never been covered in a single treatise. It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone to stay informed on this subject by reading the possible literature. At the same time, it is becoming increasingly apparent that primary literature on these substances is of universal importance in biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors, lymphokines, cytokines, or colony stimulating factors was quite artificial. They are in fact the basis of a common language for intercellular communication. As a set, they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research. **Biographical Register of the Officers and Graduates of the U.S. Military Academy, at West Point, N.Y., from Its Establishment ... 1802, to the Army Re-organization of 1866, 67.
