President,1988 Reports for 2002 include The Annual report of the Council of Economic Advisers **European Regional Growth** Bernard Fingleton,2013-06-29 Looking into the future and trying to visualize long run regional disparities is difficult There is no agreed single theory to guide our model building although some insight can be gained from analysis of the past and by looking at the different theoretical positions to see if there is any agreement at least in terms of outcome if not in terms of mechanism This is what is attempted in this book which brings together specialists with a common interest in European regional growth and in applying quantitative analytical and simulation techniques in order to provide different perspectives on the topic Many of the Chapters in the book employ the

methods of spatial econometrics Spatial econometrics is a suite of statistical and econometric tools dedicated to the analysis of spatial data in other words data that is set within the context of socio economic theories and which can be represented most informatively in mapped form These methods have emerged over the last half century from a series of influential papers and books in the fields of regional science spatial statistics and quantitative geography and are ripe for serious application in the context of the EU's development In particular they provide the means by which to analyze spatially indexed data where the time dimension is essentially suppressed because for instance the variables of interest are not available or are of questionable accuracy which is often the case when one is interested in regional rather than national variations across a number of countries

**The Impact of Recession** Alan R. Townsend, 2024-09-18  
Rich industrialised countries entered the 1980s with unemployment higher than before the Second World War Britain experienced the impact of recession more immediately and sharply over one million factory jobs were lost Originally published in 1983 and now reissued with a new Preface by the author this book points to the industries corporations and places in which job losses occurred between 1976 and 1981 *The Impact of Recession* opens with an examination of national trends which includes the post war rise and fall of manufacturing employment and the fashionable concept of de industrialisation It considers the possible and actual roles of leading industrial corporations in distributing decline to different areas The effects of the crisis on individual regions is examined in detail and the author emphasizes that it is not only the traditional areas of recession such as the North East that were affected but also

the manufacturing centres of the Midlands and the normally prosperous South East Alternative explanations of the distribution of employment are examined and the adequacy of previous explanations of unequal growth and decline are questioned The book also looks at the extent to which New Towns have suffered in the crisis and whether the well established consensus about the merits of regional planning has been broken down by the recession
