REGIONAL ECONOMIC Fafurida, Grace Natalia Marpaung, 2021-07-15 Regional economics is a part of economics which specifically discusses limitations of the economic area of a country by considering the conditions and natural resources and human resources available in each economic area. Regional economics does not discuss individual activities but rather analyzes a region as a whole by considering the various potentials that can be developed to accelerate the economic growth of the region concerned. Due to the specialization possessed by the regional economy, this science has developed into a new specialization field that stands as well as other branches of economics such as econometrics, population economics, operational research, and others. As with other sciences, regional economics appears as a criticism and at the same time provides a new dimension to economic analysis in order to complement and develop traditional economic thinking so that it can solve socio-economic problems that always change throughout the ages. This book is geared towards two groups of readers such as academics and practitioners. Each material is formulated using ordinary sentences in order to easily explain the contents and uses of science. Thus, academics and practitioners are expected to be able to capture the meaning of Regional Economics presented in the book. This book can provide benefits to the public, especially related regional officials who are able to assist in carrying out more targeted tasks.

The Economics of Regional Integration Sándor Gyula Nagy, 2025-03-12 This book develops a new methodological framework for measuring the efficiency of regional integration and the integration profile of member states. It includes rich case studies which offer a comparative analysis of ten integrations spanning four continents: The Americas, the European Union, Africa, and Asia. The Economics of Regional Integration shows the importance of regional economic integration in the world economy based partially on descriptive analyses. The authors' new methodological framework and a new composite index integration profile. It implements and quantifies relevant theories e.g. integration maturity, competitiveness, economic development, convergence to one framework, and a composite indicator. This helps to arrive at a more precise measurement of these integrations resulting in useful feedback for decision makers and leading to policy recommendations for each organisation to improve efficiency or to include new members. The text presents a comparative perspective of regional integration based on case studies by applying the same theoretical framework and a comprehensive methodology for assessing the economic readiness of membership seeking countries while also considering regional differences. It investigates the impact of regional integration on income inequality and poverty reduction by examining how common development economic policies and social programs implemented by regional organizations affect the distribution of income and wealth among member states. The comprehensive investigation of regional integration covering economic, social, and institutional factors makes the book highly relevant for advanced students, researchers, and scholars. Additionally, its potential policy context application makes it useful for policymakers and practitioners participating in regional integration programs.
