hydrology topics from monitoring to modeling and management With extreme climatic and hydrologic events becoming so frequent this book is a critical source adding knowledge to the science of extreme hydrology Topics covered include hydrometeorology monitoring climate variability and trends hydrological variability and trends landscape dynamics droughts flood processes and extreme events management adaptation and mitigation Each of the book's chapters provide background and theoretical foundations followed by approaches used and results of the applied studies This book will be highly used by water resource managers and extreme event researchers who are interested in understanding the processes and teleconnectivity of large scale climate dynamics and extreme events predictability simulation and intervention measures Presents datasets used and methods followed to support the findings included allowing readers to follow these steps in their own research Provides variable methodological approaches thus giving the reader multiple hydrological modeling information to use in their work Includes a variety of case studies thus making the context of the book relatable to everyday working situations for those studying extreme hydrology Discusses extreme event management including adaption and mitigation

In Extremis Jürgen Kropp, Hans-Joachim Schellnhuber, 2010-11-03 The book addresses a weakness of current methodologies used in extreme value assessment i.e. the assumption of stationarity which is not given in reality With respect to this issue a lot of new developed technologies are presented i.e. influence of trends vs internal correlations quantitative uncertainty assessments etc The book not only focuses on artificial time series data but has a close link to empirical measurements in order to make the suggested methodologies applicable for practitioners in water management and meteorology

Drought Policies: Case Studies on Mega-droughts for the High Level Experts and Leaders Panel on Water and Disasters (HELP) Jerome Delli Priscolli, Kenzo Hiroki, 2019-11-15 This book focuses on mega droughts of the past 20 years Twelve cases from both developed and developing countries are elaborated in the book Its intention is to draw lessons from the cases of extremely severe water shortages so

that countries and stakeholders can be better prepared for extreme drought events in the future Several recurrent themes emerge from the diverse case studies and descriptions of programs For example most chapters discuss the necessity to move from reactive compensatory to preventive policies This theme has implications for use of insurance in developing countries e g is insurance encouraging investments to help countries avoid disasters or is it acting mostly in a humanitarian way to compensate for losses to help people Several authors point to the importance of risk assessment and to developing risk based policies for drought This raises statistical issues of how such assessments of uncertainty and risks are done and how they relate to actual occurrence of events Most chapters call for more inter sectoral policies policies which integrate water resources management approaches and to the necessity of raising public awareness of droughts in times of no drought The issue of structural versus nonstructural is clear in most cases While often cast as either or the message that emerges is more one of how do you integrate these approaches Finally a few chapters bring to light how prevention is needed for national security as well as water security In Focus a book series that showcases the latest accomplishments in water research Each book focuses on a specialist area with papers from top experts in the field It aims to be a vehicle for in depth understanding and inspire further conversations in the sector
