Regulation For Revenue The Political Economy Of Land Use Exactions:

Regulation for Revenue Alan A. Altshuler, Jose A. Gomez-Ibanez, 2000-08-21 A Brookings Institution Press and Lincoln Institute of Land Policy publication Over the past two decades Americans have become increasingly skeptical about the benefits of community growth and hostile to new taxes while continuing to demand improvements in local services One response to this tension has been a burgeoning movement to raise public revenue by regulating growth In this timely book the authors explain that most growing localities now require private developers to finance public improvements as a condition for receiving permits to build These permit conditions known as exactions are most commonly used to ensure that infrastructure capacity will be adequate to serve the occupants of new real estate developments and to lessen the harmful effects of these developments on other local citizens Exactions are often used to finance new roads water and waste disposal facilities and public open space but some communities have begun to require developer financing for such services as day care job training low cost housing and ride sharing The authors see the dramatic growth of exaction financing as an epochal shift in the character of American land use regulation A function once isolated from the local government mainstream is now close to heart of fiscal and public works decisionmaking Politicians find exactions an extremely valuable tactic for resolving land use conflict Lawyers and developers worry about how to establish appropriate limits on the use of exaction economists debate their equity and efficiency and planners consider their effect on urban reform Regulation for Revenue offers an integrated appraisal of exaction financing showing that exactions come in many forms and that they can be meaningfully evaluated only by comparison with realistic alternatives These include growth restrictions tolerance of infrastructure overload and increased tax and user charges *Development Charges* Shishir Mathur, 2024-06-27 The book studies development charges to show how they are inadequate for India and suggests better ways to levy them **Local Government and the States: Autonomy, Politics and Policy** David R. Berman, 2015-06-03 This book offers an overview of the legal political and broad intergovernmental environment in which relations between local and state units of government take place the historical roots of the conflict among them and an analysis of contemporary problems concerning local authority local revenues state interventions and takeovers and the restructuring of local governments The author pays special attention to local governmental autonomy and the goals and activities of local officials as they seek to secure resources fend off regulations and interventions and fight for survival as independent units He looks at the intergovernmental struggle from the bottom up but in the process examines a variety of political activities at the state level and the development and effects of several state policies Berman finds considerable reason to be concerned about the viability and future of meaningful local government **Fiscal Policy and Economic Reforms** Mario I. Blejer, Teresa Ter-Minassian, 2002-09-11 Following *Macroeconomic Dimensions of Public Finance* this is the second volume of essays in honour of Vito Tanzi It focuses on the importance of fiscal policy on the wholesale economic reforms that are sweeping the

advanced less developed and formally communist countries Issues analyzed include the role of fiscal and budgetary policies in the process of reform the impact of privatization on the exchequer and the dilemmas for social policy in times of fiscal austerity the paradox of post socialism and post dirigisme that an efficient and harmonic move to a decontrolled liberal market economy involves active state intervention the methodological aspects relating to the proper assessment of fiscal policy mechanisms This collection of essays contributes to the understanding of the channels and transmissions mechanisms of fiscal policies in the context of major economic reforms

Laws of the Landscape Pietro S. Nivola, 1999-04-01 For decades concerns have been raised about the consequences of relentless suburban expansion in the United States But so far government programs to control urban sprawl have had little effect in slowing it down much less stopping it In this book Pietro S Nivola raises important questions about the continued suburbanization of America Is suburban growth just the result of market forces or have government policies helped induce greater sprawl How much of the government intervention has been undesirable and what has been beneficial And if suburban growth is to be controlled what changes in public policies would be not only effective but practical Nivola addresses these questions by comparing sprawling U S metropolitan areas to compact development patterns in Europe He contrasts the effects of traditional urban programs as well as accidental urban policies that have a profound if commonly unrecognized impact on cities including national tax systems energy conservation efforts agricultural supports and protection from international commerce Nivola also takes a hard look at the traditional solutions of U S urban policy agenda involving core area reconstruction projects mass transit investments smart growth controls and metropolitan organizational rearrangements and details the reasons why they often don t work He concludes by recommending reforms for key U S policies from taxes to transportation to federal regulations based on the successes and failures of the European experience Brookings Metropolitan Series

Species at Risk Jason F. Shogren, 2014-05-14 Protecting endangered species of animals and plants is a goal that almost everyone supports in principle but in practice private landowners have often opposed the regulations of the Endangered Species Act which they argue unfairly limits their right to profit from their property To encourage private landowners to cooperate voluntarily in species conservation and to mitigate the economic burden of doing so the government and nonprofit land trusts have created a number of incentive programs including conservation easements leases habitat banking habitat conservation planning safe harbors candidate conservation agreements and the no surprise policy In this book lawyers economists political scientists historians and zoologists come together to assess the challenges and opportunities for using economic incentives as compensation for protecting species at risk on private property They examine current programs to see how well they are working and also offer ideas for how these programs could be more successful Their ultimate goal is to better understand how economic incentive schemes can be made both more cost effective and more socially acceptable while respecting a wide range of views regarding opportunity costs legal standing biological effectiveness moral appropriateness and social context

The Oxford Handbook of Urban Economics and Planning Nancy Brooks,Kieran Donaghy,Gerrit-Jan Knaap,2012-01-12 This volume embodies a problem driven and theoretically informed approach to bridging frontier research in urban economics and urban regional planning The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship Although economists were among the early contributors to the literature on urban planning many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions equity over efficiency and normative prescriptions over positive analysis Planners meanwhile even as they draw upon economic principles often view the work of economists as abstract not sensitive to institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the efficient provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap the book highlights the best scholarship in planning and economics that address the most pressing urban problems of our day and stimulates further dialog between scholars in urban planning and urban economics [Gendered Approaches to Spatial Development in Europe](#) Barbara Zibell,Doris Damyanovic,Ulrike Sturm,2019-03-27 This book explores the extent to which gendered approaches are evident

and effective in spatial development in selected European countries Beginning with an introduction to theories and concepts of gender space and development the book includes a brief historical review of gender in spatial planning and development throughout Europe in general and an overview of different national frameworks in European countries comparing legal organisational and cultural similarities and differences This is followed by a critical reflection on how simplifications and stereotypes of gender concepts are used in the practice of spatial development The main part of the book offers a transnational discussion of planning practices on selected thematic topics It starts with gender sensitivity in urban master planning and at neighbourhood level referring to different types of planning manuals Furthermore the book focuses on gender sensitive evaluation in urban planning as well as international agendas for sustainable development as a framework for a new generation of gender equality policies The chapter authors assert that climate change migration and austerity have threatened gender equality and therefore spatial development needs to be especially alert to gender dimensions The editors end with an outlook and suggestions for further action and research on gender issues in spatial development With inputs from some of Europe's leading thinkers on gender space and development this volume is designed to inspire students scholars and practitioners to reflect upon the contribution that gendered approaches can make in the various fields of spatial development and environmental planning

Reconstructing Urban Regime Theory Mickey Lauria, 1997 Providing a robust conceptual framework urban regime theory has despite its cited shortcomings gained a dominant position in the literature on local politics in addition to its recent use in contexts outside the United States and in comparative cross national research *Reconstructing Urban Regime Theory* presents a challenging argument for the need to reconceptualize urban regime's middle level abstractions by interpreting it through the higher level abstractions of regulationist theory The contributors propose stronger conceptual linkages between local agents and institutions regime transformation and the restructuring of urban space The blend of empirical and case study provides an excellent mix of theory and practice

The Morning After Earth Day Mary Graham, 2010-12-01 A Brookings Institution Press and Governance Institute publication As we approach the 30th anniversary of Earth Day the first of its kind was April 1970 congressional debate about environmental protection often remains paralyzed and polarized But across the country environmental pragmatism is gaining ground *The Morning After Earth Day* explores how policymakers business executives and citizen groups are fighting novel political battles and sometimes making peace with surprising compromises After a generation of progress in reducing large sources of industrial and municipal pollution and in improving management of public lands today's environmental conflicts are more complex They involve controlling pollution caused by farmers small businesses drivers of aging cars and homeowners as well as minimizing ecological threats on private land Remedies often lie in politically treacherous territory persuading ordinary people to change their daily routines rather than ordering big business to adopt new technology or government officials to manage land differently As Mary Graham shows practical approaches are resolving immediate disputes and providing clues for future

policy But core dilemmas remain They include how to reconcile environmental protection with respect for private property how to balance federal and state authority and how much to rely on behavioral versus technological change Only by reclaiming the debate about these dilemmas from extremists and confronting them head on will the nation build a solid foundation for the next generation of environmental policy *Local Government and the States* David Berman, 2019-07-26 This book offers an overview of the legal political and broad intergovernmental environment in which relations between local and state units of government take place the historical roots of the conflict among them and an analysis of contemporary problems concerning local authority local revenues state interventions and takeovers and the restructuring of local governments The author pays special attention to local governmental autonomy and the goals and activities of local officials as they seek to secure resources fend off regulations and interventions and fight for survival as independent units Now in a thoroughly revised second edition this book examines marijuana use minimum wages the establishment of sanctuary cities and the regulation of ride sharing companies Looking at the intergovernmental struggle from the bottom up and in the process examining a variety of political activities and policies at the state level Berman finds considerable reason to be concerned about the viability and future of meaningful local government This book improves our understanding of the relationship between state and local governments It provides a thoughtful look at the past present and possibly the future of local home rule **Regulatory Takings** William A. Fischel, 1995 State and federal government regulations are disciplined by property owner coalitions whose voice is clearly audible in the statehouses and in Congress **Fixer-Upper** Jenny Schuetz, 2022-02-22 Fixer Upper is the first book assessing how the broad set of local state and national housing policies affect people and communities It does more than describe how yesterday's policies led to today's problems It proposes practical policy changes that can make stable decent quality housing more available and affordable for all Americans in all communities Fixing systemic problems that arose over decades won't be easy in large part because millions of middle class Americans benefit from the current system and feel threatened by potential changes But Fixer Upper suggests ideas for building political coalitions among diverse groups that share common interests in putting better housing within reach for more Americans building a more equitable and healthy country *Introduction to Environmental Economics* Nick Hanley, Jason F. Shogren, Ben White, Benedict White, 2019 The only easy to read and practical non specialist introduction to key concepts in environmental economics written by an international author team **Learning from Arnstein's Ladder** Mickey Lauria, Carissa Schively Slotterback, 2020-10-12 Sherry Arnstein writing in 1969 about citizen involvement in planning processes in the United States described a ladder of citizen participation that showed participation ranging from low to high Arnstein depicted the failings of typical participation processes at the time and characterized aspirations toward engagement that have now been elevated to core values in planning practice But since that time the political economic and social context has evolved greatly and planners organizers and residents have been involved in planning and community

development practice in ways previously unforeseen Learning from Arnstein's Ladder draws on contemporary theory expertise empirical analysis and practical applications in what is now more commonly termed public engagement in planning to examine the enduring impacts of Arnstein's work and the pervasive challenges that planners face in advancing meaningful public engagement This book presents research from throughout the world including Australia Brazil India Indonesia Portugal Serbia and the United States among others that utilizes critiques revises and expands upon Arnstein's aspirational vision It is essential reading for educators and students of planning

Beito, Peter Gordon, Alexander Tabarrok, 2009-10-01 Assembling a rich history and analysis of large scale private and voluntary community based provision of social services urban infrastructure and community governance this book provides suggestions on how to restore the vitality of city life Historically the city was considered a center of commerce knowledge and culture a haven for safety and a place of opportunity Today however cities are widely viewed as centers for crime homelessness poverty unemployment traffic pollution and other social ills In many cities government increasingly dominates life consuming vast resources to cater to special interest groups Decision making has become intensely politicized bureaucratic and largely unaccountable to the populace The Voluntary City provides a rich history and analysis of private locally based provision of social services urban infrastructure and community governance Such systems have offered superior education transportation housing crime control recreation health care and employment by being more effective innovative and responsive than those provided through special interest politics and bureaucracy The Voluntary City reveals how the process of providing local public goods through the dynamism of freely competitive market based entrepreneurship is unmatched in renewing communities and strengthening the bonds of civil society A refreshing challenge to the orthodoxy that government alone can improve community life The Voluntary City will be an essential reference for anyone interested in the future of cities including scholars and students policy makers civic and business leaders and urban citizens
