Regulation Of The Pharmaceutical Industry:

Regulation of the Pharmaceutical Industry J. Abraham, H. Lawton Smith, 2003-06-10 How are pharmaceutical technologies developed and controlled in our societies To what extent should the availability of these technologies be determined by scientific experts a democratic state the interests of final users or ethical principles This unique collection brings together the work of social scientists ethicists lawyers and policy analysts on regulation ethics and innovation in the pharmaceutical industry Regulatory systems and their implications for public health in North America Europe and developing countries are discussed including case studies of norplant interferon and anti fertility vaccines *The Law and Ethics of the Pharmaceutical Industry* M.N.G. Dukes, 2005-11-04 As one of the most massive and successful business sectors the pharmaceutical industry is a potent force for good in the community yet its behaviour is frequently questioned could it serve society at large better than it has done in the recent past Its own internal ethics both in business and science may need a careful reappraisal as may the extent to which the law administrative civil and criminal succeeds in guiding and where necessary constraining it The rules of behavior that may be considered to apply to today's pharmaceutical industry have emerged over a very long period and the process goes on Even the immensely detailed standards for quality safety and efficacy laid down in drug law and regulation during the second half of the twentieth century have their limitations as tools for ensuring that the public interest is well served In particular national and regional regulatory agencies are heavily dependent on industrial data for their decision making their standards and competence vary and even the existing network of agencies does not cover the entire world What is more there are many areas of law and regulation affecting the industry concerning for example the pricing of medicines the conduct of clinical studies the health protection of workers and concern for the environment In some fields it is indeed hardly possible to maintain standards through regulation Professor N M Graham Dukes a physician and lawyer with long term experience in industrial research management academic study and international drug policy provides here a powerfully documented analysis into the way this industry thinks acts and is viewed and examines the current trends pointing to change Provides a balanced picture of the current role of the pharmaceutical industry in society Includes indices of conventions laws and regulations as well as judicial and disciplinary cases This is the only book addressing the legal implications of big pharma activities and ethical standards **Science, Politics And The Pharmaceutical Industry** John Abraham, 0 John Abraham University of Reading., 2023-05-31 Drug disasters from Thalidomide to Opren and other less dramatic cases of drug injury raise questions about whether the testing and control of medicines provides satisfactory protection for the public In this revealing study John Abraham develops a theoretically challenging realist approach in order to probe deeply into the work of scientists in the pharmaceutical industry and governmental drug regulatory authorities on both sides of the Atlantic Through the examination of contemporary controversial case studies he exposes how the commercial interest of drug manufacturers are consistently given the benefit

of the scientific doubts about medicine safety and effectiveness over and above the best interests of patients A highly original combination of philosophical rigour historical sensitivity and empirical depth enables the black box of industrial and government science to be opened up to critical scrutiny much more than in previous social scientific study All major aspects of drug testing and regulation are considered including pre clinical animal tests clinical trials and postmarketing surveillance of adverse drug reactions The author argues that drug regulators are too dependent on pharmaceutical industry resources and expertise and too divorced from public accountability The problem of corporate bias is particularly severe in the UK where regulatory decisions about medicine safety are shrouded in greater secrecy than in the US Since the purpose of drug regulation should be to maximize the safety and effectiveness of medicines for patients the public needs and deserves policies to counteract corporate bias in drug testing and evaluation John Abraham s realist analysis provides a robust basis for policy interventions at the institutional and legislative levels He proposes that corporate bias could be reduced by more extensive freedom of information greater autonomy of government scientists from pharmaceutical industry the development of independent drug testing by the regulatory authority increased patient representation on regulatory committees and more frequent and thorough oversight of regulatory performance by the legislature This book should be of interest to anyone who cares about how medicines should be controlled in modern society It should prove particularly rewarding for students and researchers in the sociology of science and technology science and medicines policy medical sociologists the medical and pharmaceutical professions and consumer organizations

Overdose Richard Allen Epstein,2006-01-01 This book is the first to offer a comprehensive examination of the pharmaceutical industry by following the tortuous course of a new drug as it progresses from early development to final delivery Richard A Epstein looks closely at the regulatory framework that surrounds all aspects of making pharmaceutical products today and he assesses which current legal and regulatory practices make sense and which have gone awry While critics of pharmaceutical companies call for ever more stringent controls on virtually every aspect of drug development and approval Epstein cautions that the effect of such an approach will be to stifle pharmaceutical innovation and slow the delivery of beneficial treatments to the patients who need them The author considers an array of challenges that confront the industry conflicts of interest among government academe and the drug companies intellectual property rights that govern patents FDA regulation pricing disputes marketing practices and liability issues including those brought to light in the recent VIOXX case Epstein argues that to ensure the continuing creativity efficiency and success of the pharmaceutical industry the best system will feature strong property rights and clearly enforceable contracts with minimal regulatory and judicial interference

Regulation of Pharmaceuticals Henry G. Grabowski, John Mitcham Vernon, 1983. The authors review the empirical evidence concerning the Food and Drug Administration's effect on the rate of innovation, the delays in introducing new drugs and the profitability of pharmaceutical research. *Global Regulations of Medicinal, Pharmaceutical, and Food Products* Faraat Ali, Leo M.L. Nollet, 2024-07-05. Medicine regulation demands the application of sound medical scientific and technical knowledge and skills and operates within a legal framework. Regulatory functions involve interactions with various stakeholders e.g. manufacturers, traders, consumers, health professionals, researchers and governments whose economic, social and political motives may differ, making implementation of regulation both politically and technically challenging. This book discusses regulatory landscape globally and the current global regulatory scenario of medicinal products and food products comprehensively. Features: Discusses how recent developments of medicinal and food products have opened up innovative solutions for many of the current challenges societies face presently. Explores the manifold variations between the regulatory bodies in different countries that have not previously been collected to this extent. Presents details on the substantial progress in analytical methodologies for labelling applications and the creation of appropriate test criteria for pharmaceuticals and their safety analysis. Reviews how more worldwide collaboration and cooperation in the regulatory area is still required.
