Rehabilitation Management Of Amputees:

Rehabilitation Management of Amputees Sikhar Nath Banerjee, 1982 **Amputee Rehabilitation, An Issue of Physical Medicine and Rehabilitation Clinics of North America** Robert Meier III, 2014-02-28 This issue of Physical Medicine and Rehabilitation Clinics of North America is devoted to Amputee Rehabilitation Editor Robert Meier III MD is the Medical Director of the Amputee Services of America and has assembled the top experts to review this important topic Articles in this issue include Principles of Contemporary Amputee Rehabilitation Etiology and Demographics of Amputation Surgical Techniques for Ideal Outcomes Pre prosthetic Care Prosthetic Choices for Leg and Arm Amputees Devising the Prosthetic Prescription and Typical Examples Prosthetic Training Complications Following an Amputation Outcomes Measurement Gait Evaluation for the Leg Amputee Innovative Techniques and Future Options Emotional Adaptation to Limb Loss Pain Management for the Amputee and Amputation Classification and Functional Outcomes *Comprehensive Management of the Upper-Limb Amputee* Diane J. Atkins, Robert H. III Meier, 2012-12-06 Each year in the United States an estimated 40 000 persons lose a limb Of these amputees approximately 30% lose a hand or an arm This loss is most frequently related to trauma occurring in the healthy young adult male and is often work related Approximately 3% of all amputees are born with congenital limb absence In children the ratio of congenital to acquired amputation is 2 1 and the ratio of upper limb to lower limb amputees is 1 2 1 Therefore since relatively few amputations result in upper limb loss only a small number of health practitioners even those specializing in amputee rehabilitation have the opportunity to provide services for a significant number of arm amputees As a result clinicians need to share their experiences so that the full range of options for optimum care and rehabilitation of the patient population may be considered To meet this challenge for wider communication of clinical experience a group of upper limb amputee specialists met in Houston Texas in 1981 to serve as the core faculty for a course entitled Contemporary Issues in Upper Extremity Amputation and Prosthetic Function This program provided the opportunity for surgeons physiatrists engineers prosthetists social workers psychologists occupational therapists and physical therapists from the United States and Canada to discuss their extensive experience in working with upper extremity amputees A second conference continuing the discussion of upper limb amputee rehabilitation was held one year later *Limb Amputation* R. Ham, L. T. Cotton, 2013-12-20 The majority of amputations in the western world today are due to vascular disease Despite the advances in surgical treatment of this disease particularly by reconstruction it is a sad fact that the number of amputations performed in these countries each year for vascular disease is increasing Most of these amputees are elderly and their life expectancy is short so it is important that the treatment and rehabilitation that they receive is informed appropriate efficient and swift to enable them to return successfully to life in the community for their remaining years Management of this group of patients has proved to be successful only if a multidisciplinary team approach is adopted Until recently in the UK this approach sadly has only been implemented by a few centres However with the

publication of the McColl report into the prosthetic and wheelchair service in 1986 interest in the care of the amputee is growing throughout the country This book covers all aspects of amputation from disease and diagnosis to rehabilitation and community discharge with emphasis on the management of the largest group the vascular lower limb amputee A team approach is described and emphasized as being essential for good results and subsequent successful return into the community The role of each of the important disciplines is described in relation to the appropriate part of the rehabilitation phase
