Seismic Assessment and Retrofit of Reinforced Concrete Buildings fib Fédération internationale du béton, 2003-08-01 In most parts of the developed world the building stock and the civil infrastructure are ageing and in constant need of maintenance repair and upgrading Moreover in the light of our current knowledge and of modern codes the majority of buildings stock and other types of structures in many parts of the world are substandard and deficient This is especially so in earthquake prone regions as even there seismic design of structures is relatively recent In those regions the major part of the seismic threat to human life and property comes from old buildings Due to the infrastructure s increasing decay frequently combined with the need for structural upgrading to meet more stringent design requirements especially against seismic loads structural retrofitting is

becoming more and more important and receives today considerable emphasis throughout the world In response to this need a major part of the fib Model Code 2005 currently under development is being devoted to structural conservation and maintenance More importantly in recognition of the importance of the seismic threat arising from existing substandard buildings the first standards for structural upgrading to be promoted by the international engineering community and by regulatory authorities alike are for seismic rehabilitation of buildings This is the case for example of Part 3 Strengthening and Repair of Buildings of Eurocode 8 i e of the draft European Standard for earthquake resistant design and which is the only one among the current 2003 set of 58 Eurocodes attempting to address the problem of structural upgrading It is also the case of the recent 2001 ASCE draft standard on Seismic evaluation of existing buildings and of the 1996 Law for promotion of seismic strengthening of existing reinforced concrete structures in Japan As noted in Chapter 1 of this Bulletin fib as CEB and FIP did before has placed considerable emphasis on assessment and rehabilitation of existing structures The present Bulletin is a culmination of this effort in the special but very important field of seismic assessment and rehabilitation It has been elaborated over a period of 4 years by Task Group 7 1 Assessment and retrofit of existing structures of fib Commission 7 Seismic design a truly international team of experts representing the expertise and experience of all the important seismic regions of the world In the course of its work the team had six plenary two day meetings in January 1999 in Pavia Italy in August 1999 in Raleigh North Carolina in February 2000 in Queenstown New Zealand in July 2000 in Patras Greece in March 2001 in Lausanne Switzerland and in August 2001 in Seattle Washington In October 2002 the final draft of the Bulletin was presented to public during the 1st fib Congress in Osaka It was also there that it was approved by fib Commission 7 Seismic Design The contents is structured into main chapters as follows 1 Introduction 2 Performance objectives and system considerations 3 Review of seismic assessment procedures 4 Strength and deformation capacity of non seismically detailed components 5 Seismic retrofitting techniques 6 Probabilistic concepts and methods 7 Case studies

Durability of Concrete and Cement Composites Chris L. Page, M M Page, 2007-06-30 Whilst most structures made using concrete and cement based composites have not shown signs of premature degradation there have been notable exceptions In addition there is increasing pressure for new structures to remain in serviceable condition for long periods with only minimal maintenance before being recycled All these factors have highlighted the issues of what affects the durability of these materials in different circumstances and how material properties can be measured and improved Durability of concrete and cement composites summarises key research on these important topics After an introductory chapter the book reviews the pore structure and chemistry of cement based materials providing the foundation for understanding the particular aspects of degradation which are discussed in the following chapters These include dimensional stability and cracking processes chemical and microbiological degradation of concrete corrosion of reinforcing and prestressing steels deterioration associated with certain aggregates effects of frost and problems involving fibre reinforced and polymer cement composites

With its distinguished international team of contributors Durability of concrete and cement composites is a standard reference for all those concerned with improving the service life of structures using these materials Analyses a range of materials such as reinforced steel in concrete pre stressed concrete and cement composites Discusses key degradation phenomena such as cracking processes and the impact of cold weather conditions A standard reference for those concerned with improving the service life of structures using concrete and cement based composites High Performance Self-Consolidating Cementitious Composites Ganesh Babu Kodeboyina,2018-02-19 This book attempts to bring together some of the basic intricacies in the production of the complete range of self consolidating cementitious composites with a proper understanding of the contributions of different materials and their combinations including performance and limitations Presents a comprehensive perspective of the state of the art in self compacting concretes while explaining the basic background and principles includes possible alternatives of making SCC with different powder extenders and pozzolanic materials Explores concepts through theoretical and graphical representations *High strength concrete joint FIP CEB state of the art report* FIB - International Federation for Structural Concrete,1990-08-01 **Memoirs of Faculty of Technology, Tokyo Metropolitan University** Tōkyō Toritsu Daigaku. Kōgakubu,1984 *High strength concrete FIP CEB Bulletin* 197 FIB - International Federation for Structural Concrete,1990-08-01 **Cement Replacement Materials** Ali Akbar Ramezaniapour,2013-09-24 The aim of this book is to present the latest findings in the properties and application of Supplementary Cementing Materials and blended cements currently used in the world in concrete Sustainability is an important issue all over the world Carbon dioxide emission has been a serious problem in the world due to the greenhouse effect Today many countries agreed to reduce the emission of CO₂ Many phases of cement and concrete technology can affect sustainability Cement and concrete industry is responsible for the production of 7% carbon dioxide of the total world CO₂ emission The use of supplementary cementing materials SCM design of concrete mixtures with optimum content of cement and enhancement of concrete durability are the main issues towards sustainability in concrete industry Handbook of Environmental Degradation of Materials Myer Kutz,2012-12-31 Nothing stays the same for ever The environmental degradation and corrosion of materials is inevitable and affects most aspects of life In industrial settings this inescapable fact has very significant financial safety and environmental implications The Handbook of Environmental Degradation of Materials explains how to measure analyse and control environmental degradation for a wide range of industrial materials including metals polymers ceramics concrete wood and textiles exposed to environmental factors such as weather seawater and fire Divided into sections which deal with analysis types of degradation protection and surface engineering respectively the reader is introduced to the wide variety of environmental effects and what can be done to control them The expert contributors to this book provide a wealth of insider knowledge and engineering knowhow complementing their explanations and advice with Case Studies from areas such as pipelines tankers packaging and chemical processing equipment ensures

that the reader understands the practical measures that can be put in place to save money lives and the environment The Handbook s broad scope introduces the reader to the effects of environmental degradation on a wide range of materials including metals plastics concrete wood and textiles For each type of material the book describes the kind of degradation that effects it and how best to protect it Case Studies show how organizations from small consulting firms to corporate giants design and manufacture products that are more resistant to environmental effects *Civil Engineering* Donald G.

Proceedings of the Fourth International Conference on Durability of Building Materials and Components Gyoujin Cho,2013-10-02 Proceedings of the Fourth International Conference on Durability of Building Materials and Components Volume I contains the proceedings of the Fourth International Conference on Durability of Building Materials and Components held in Singapore on November 4 6 1987 The conference provided a forum for reviewing advances that have been made with regards to the durability of building materials and components and tackled topics ranging from concrete materials and structures to fiber reinforced concrete plastics surface coatings and building codes and specifications Comprised of 67 chapters this volume first summarizes the technical barriers to service life prediction and outlines research directions for overcoming such barriers The discussion then turns to the deterioration of slate tiles containing iron sulfides prediction of durability of building sealants and the durability of building ceramics in agricultural environments Subsequent chapters focus on the influence of seawater curing on the pore structure of flyash blended cement mortar effect of cement composition on the durability of natural fibers in mortar permeability control of concrete protective layers in products and theory and experimental evidence concerning maximum and minimum strength of composite materials The applications of surface integral techniques to fracture analysis are also considered This book will be of interest to practitioners and research workers in engineering Symposium on Concrete, 1983 ,1983 Evaluation of Earthquake Damaged Concrete and Masonry Wall Buildings ,1998 **Punching of Structural Concrete Slabs** fib Fédération internationale du béton,2001-01-01 Punching is considered to be one of the most difficult problems in structural concrete design and

mechanical models or theoretical analyses were developed rather late in the history of concrete research attempts This fib Bulletin reviews the development of design models and theoretical analyses since the CEB Bulletin 168 Punching Shear in Reinforced Concrete State of the Art Report published in 1985 The role of the concrete tensile strength was specially addressed In this respect the present bulletin is also following up the CEB Bulletin 237 Concrete Tension and Size Effects Utilisation of concrete tension in structural concrete design and relevance of size effect Contributions from CEB Task Group 2 7 published in 1997 Apart from new theoretical developments a comprehensive databank for comparisons with experimental evidence is included About 400 punching tests were critically reviewed and evaluated in a consistent manner This is thought to be the first step towards a generally agreed selection of reliable tests The evident value of such a data bank is illustrated by comparisons carried out between the data and some of the analytical proposals as well as empirical code formulas
