**Relativistic Astrophysics** Igor D. Novikov, Ia. B. Zel'dovich, 1978      **Stars and Relativity** Ya. B. Zel'dovich, I. D. Novikov, 2014-06-10 Two of the greatest astrophysicists of the 20th century explore general relativity properties of matter under astrophysical conditions stars and stellar systems A valuable resource for physicists astronomers graduate students 1971 edition      Einstein's Field Equations and Their Physical Implications Bernd G. Schmidt, 2008-01-11 This book serves two purposes The authors present important aspects of modern research on the mathematical structure of Einstein's field equations and they show how to extract their physical content from them by mathematically exact methods The essays are devoted to exact solutions and to the Cauchy problem of the field equations as well as to post Newtonian approximations that have direct physical implications Further topics concern quantum gravity and optics in gravitational fields The book addresses researchers in relativity and differential geometry but can also be used as additional reading material for graduate students      **The Theory of Sound, Volume One** J. W. S. Rayleigh, 2013-01-17 Volume One covers harmonic vibrations systems with one degree of freedom vibrating systems in general transverse vibrations of strings longitudinal and torsional vibrations of bars vibrations of membranes and plates curved shells and plates and electrical vibrations      *Topology* John G. Hocking, Gail S. Young, 2012-05-23 Superb one year course in classical topology Topological spaces and functions point set topology much more Examples and problems Bibliography Index      *Analytical Methods of Optimization* D. F. Lawden, 2006-05-05 Suitable for advanced undergraduates and graduate students this text surveys the classical theory of the calculus of variations It takes the approach most appropriate for applications to problems of optimizing the behavior of engineering systems Two of these problem areas have strongly influenced this presentation the design of the control systems and the choice of rocket trajectories to be followed by terrestrial and extraterrestrial vehicles Topics include static systems control systems additional constraints the Hamilton Jacobi equation and the accessory optimization problem Prerequisites include a course in the analysis of functions of many real variables and a familiarity with the elementary theory of ordinary differential equations especially linear equations Emphasis throughout the text is placed upon methods and principles which are illustrated by worked problems and sets of exercises Solutions to the exercises are available from the publisher upon request      *Neutron Stars 1* P. Haensel, A. Y. Potekhin, D. G. Yakovlev, 2006-11-03 The book gives an extended review of theoretical and observational aspects of neutron star physics With masses comparable to that of the Sun and radii of about ten kilometres neutron stars are the densest stars in the Universe This book describes all layers of neutron stars from the surface to the core with the emphasis on their structure and equation of state Theories of dense matter are reviewed and used to construct neutron star models Hypothetical strange quark stars and possible exotic phases in neutron star cores are also discussed Also covered are the effects of strong magnetic fields in neutron star envelopes      *Continued Fractions* Aleksandr I. Information Theory Robert B. Ash,1990-01-01 Developed by Claude Shannon and Norbert Wiener in the late Forties information theory or statistical communication theory deals with the theoretical underpinnings of a wide range of communication devices radio television radar computers telegraphy and more This book is an excellent introduction to the mathematics underlying the theory Designed for upper level undergraduates and first year graduate students the book treats three major areas analysis of channel models and proof of coding theorems Chapters 3 7 and 8 study of specific coding systems Chapters 2 4 and 5 and study of statistical properties of information sources Chapter 6 Among the topics covered are noiseless coding the discrete memoryless channel error correcting codes information sources channels with memory and continuous channels The author has tried to keep the prerequisites to a minimum However students should have a knowledge of basic probability theory Some measure and Hilbert space theory is helpful as well for the last two sections of Chapter 8 which treat time continuous channels An appendix summarizes the Hilbert space background and the results from the theory of stochastic processes necessary for these sections The appendix is not self contained but will serve to pinpoint some of the specific equipment needed for the analysis of time continuous channels In addition to historic notes at the end of each chapter indicating the origin of some of the results the author has also included 60 problems with detailed solutions making the book especially valuable for independent study     Elementary Quantum Chemistry Frank L.
