 Glawion, 2020-05-13 It is common believe that the centers of all galaxies exhibit supermassive black holes with masses
 ranging from millions up to billions of the mass of our Sun By accreting surrounding matter the luminosity of these galactic
 nuclei can outshine the emission of their host galaxies If this is the case they are called active galactic nuclei Some of these
 objects eject powerful outflows composed of plasma called jets These jets can produce non thermal radiation which
 observable across the entire electromagnetic spectrum from radio up to the gamma ray frequencies At highest frequencies
 TeV range most of the detected active galaxies have jets directed along or close to the line of sight However also galaxies
 with larger angles to the line of sight showing fascinating features were discovered in seeming contradiction to traditional
 models for these so called radio galaxies Thus the latter are of particular importance for understanding active galactic nuclei
 in general This Special Issue contains reviews and research articles about the current knowledge of radio galaxies at TeV
 energies including observational results and theoretical models It is intended to guide the interested reader deeper into this

Godunov Methods E.F. Toro, 2012-12-06 This edited review book on Godunov methods contains 97 articles all of which were presented at the international conference on Godunov Methods Theory and Applications held at Oxford in October 1999 to commemorate the 70th birthday of the Russian mathematician Sergei K Godunov The meeting enjoyed the participation of 140 scientists from 20 countries one of the participants commented everyone is here meaning that virtually everybody who had made a significant contribution to the general area of numerical methods for hyperbolic conservation laws along the lines first proposed by Godunov in the fifties was present at the meeting Sadly there were important absentees who due to personal circumstance could not attend this very exciting gathering The central theme of the meeting and of this book was numerical methods for hyperbolic conservation laws following Godunov's key ideas contained in his celebrated paper of 1959 But Godunov's contributions to science are not restricted to Godunov's method

Lämmerzahl,2003-09-16 The relation between quantum theory and the theory of gravitation remains one of the most outstanding unresolved issues of modern physics According to general expectation general relativity as well as quantum field theory in a fixed background spacetime cannot be fundamentally correct Hence there should exist a broader theory comprising both in appropriate limits i e quantum gravity This book gives readers a comprehensive introduction accessible to interested non experts to the main issues surrounding the search for quantum gravity These issues relate to fundamental questions concerning the various formalisms of quantization specific questions concerning concrete processes like gravitational collapse or black hole evaporation and the all important question concerning the possibility of experimental tests of quantum gravity effects **Astrophysical Radiation Hydrodynamics** Karl-Heinz A. Winkler,Michael L.

Norman,2012-12-06 This NATO Advanced Research Workshop was devoted to the pre sentation evaluation and critical discussion of numerical methods in nonrelativistic and relativistic hydrodynamics radia tive transfer and radiation coupled hydrodynamics The unifying theme of the lectures was the successful application of these methods to challenging problems in astrophysics The workshop was subdivided into 3 somewhat independent topics each with their own subtheme Under the heading radiation hydrodynamics were brought together context theory methodology and application of radia tive transfer and radiation hydrodynamics in astrophysics The intimate coupling between astronomy and radiation physics was underscored by examples from past and present research Frame dependence of both the equation of transfer plus moments and the underlying radiation quantities was discussed and clarified Limiting regimes in radiation coupled flow were identified and described the dynamic diffusion regime received special emphasis Numerical methods for continuum and line transfer equations in a given background were presented Two examples of methods for computing dynamically coupled radia tion matter fields were given In 1 d and assuming LTE the complete equations of radiation hydrodynamics can be solved with current computers Such is not the case in 2 or 3 d which were identified as target areas for research The use of flux limiters was vigorously discussed in this connection and enlivened the meeting
