Religion and Coping in Mental Health Care Joseph

Pieper, Marinus van Uden, 2005-01-01 Joseph Pieper and Marinus van Uden have proposed a book consisting of previously published papers on the topics of religion coping and mental health care. It covers quite a bit of territory: the complex relationships between religion and mental health; surveys that present the views of therapists and patients about the interface between religion and mental health; a case study of a religious patient struggling with psychological problems; empirical studies of religious coping among various groups; and a method for teaching the clinical psychology of religion. Although the papers are diverse, they are unified by several themes. First, the papers convey a balanced approach to religion and psychology. They speak to the potentially positive and negative contributions religion can make to health and well-being. Second, several of the papers focus on the role of religious coping among patients in the Netherlands. This focus is noteworthy since the large majority of this theory and research has been limited to the USA. Third, they underscore the value of a cross-cultural approach to the field. Their surveys point to the importance of religious worldview perspectives to many patients and therapists in the Netherlands, even though the culture is more secularised than the USA. However, their papers also suggest that the manifestation of these religious worldview perspectives may take different shape in the Netherlands. Fourth, the papers have clinical relevance. The case history of the obsessive compulsive patient by Van Uden, ch 4, contains an excellent example of the way in which religious resources can be accessed to counter dysfunctional behaviours. This volume shows initial effort in a newly emerging area of study. It is encouraging to see a significant body of research and practice on the psychology of religion and coping coming out of the Netherlands. It could stimulate further advances in a more cross-culturally sensitive clinical psychology of religion. Kenneth Pargament, Professor of Psychology, Bowling Green State University in Ohio, USA.

Faith And Mental Health, 2009 Dr Koenig opens a window on mental health, providing an unprecedented source of practical information about the relationship between religion and mental health. Dr Koenig examines how Christianity and other world religions deliver mental health services today and he makes recommendations based on research expertise and experience for new programs to meet local needs.

Koh, former US Assistant Secretary for Health for the Department of Health and Human Services, this volume examines almost every aspect of health, reviewing past and more recent research on the relationship between religion and health outcomes.

Handbook of Spirituality, Religion, and Mental Health David H. Rosmarin, Harold G. Koenig, 2020-04-21 Research has indicated that spiritual and religious factors are strongly tied to a host of mental health characteristics in both positive and negative ways. That body of research has significantly grown since publication of the first edition of this book 20 years ago. The second edition of the *Handbook of Spirituality, Religion, and Mental Health* identifies not only whether religion and spirituality influence mental health and vice versa, but also how, why, and for whom. Hence, 100% of the book is now revised with new chapters and new contributors. Contents address eight categories of mental disorders as well as other key aspects of social
