Lunar Descent:

Analog Study of Descents from Lunar Orbit Joseph N. Sivo, Carl E. Campbell, 1962 **Lunar Descent** Allen Steele, 2015-05-19 The former head of a lunar mining operation returns to the moon and is immediately sucked into a dangerous morass of labor troubles, larceny, and corporate wrongdoing in this wildly entertaining science fiction thrill ride. There is big trouble on the moon. The blue-collar working stiffs of Descartes Station, who mine the surface for minerals and the North Pole for water, have become increasingly dissatisfied with Skycorp's general disregard for its employees, well-being. Following the most recent spate of layoffs, the labor strike grumblings have only grown louder, so the company is sending former base administrator and recovering alcoholic Lester Riddell back into the fold in an attempt to boost morale and output alike. The truth, however, becomes shockingly apparent to Riddell almost immediately upon his return. Not only has he been unceremoniously dumped into a muddled mess of larceny, piracy, and corporate malfeasance, it appears that Skycorp is purposely setting him up to fail, which could spell finis for Descartes Station and every trash-talking, pot-smoking, porn-loving Vacuum Sucker and Moondog who toils there. But as the Skycorp suits are about to discover, they've just made the biggest mistake of their corporate lives because Lester Riddell is nobody's fall guy. Three-time Hugo Award winner Allen Steele has seen the near future, and it isn't pretty; it's noisy, dirty, dangerous, and chaotic. Thrilling, wildly inventive, delightfully profane, and totally outrageous, *Lunar Descent* is one hell of a rocket ride with a master of science fiction at the helm.

Human Missions to Mars Donald Rapp, 2023-01-01 In this book, Donald Rapp looks at human missions to Mars from a technological perspective. He divides the mission into a number of stages: Earth's surface to low Earth orbit (LEO), departing from LEO toward Mars, Mars orbit insertion and entry, descent and landing, ascent from Mars, trans-Earth injection from Mars orbit, and Earth return. A mission to send humans to explore the surface of Mars has been the ultimate goal of planetary exploration since the 1950s, when von Braun conjectured a flotilla of 10 interplanetary vessels carrying a crew of at least 70 humans. Since then, more than 1,000 studies were carried out. This third edition provides extensive updating and additions to the last edition, including new sections and many new figures, tables, and references. **Lunar Outpost** Erik Seedhouse, 2009-04-22 *Lunar Outpost* provides a detailed account of the various technologies, mission architectures, medical requirements, and training needed to return humans to the Moon within the next decade. It focuses on the means by which a lunar outpost will be constructed and also addresses major topics such as the cost of the enterprise and the roles played by private companies and individual countries. The return of humans to the surface of the Moon will be critical to the exploration of the solar system. The various missions are not only in pursuit of scientific knowledge but also looking to extend human civilization, economic expansion, and public engagement beyond Earth. As well as NASA, China's Project 921, Japan's Aerospace Exploration Agency, Russia, and the European Space Agency are all planning manned missions to the Moon and eventually to Mars. The Ares I and Ares V are the biggest rockets since the Saturn V, and there is much state-of-the-art technology.
