Comprehensive Articulatory Phonetics T. L. Cleghorn, N. M. Rugg, 2011-08-06 Comprehensive Articulatory Phonetics teaches how to recognize record and reproduce the sounds of any language Phonetics is the study of sounds Specifically it is the study of human speech sounds A person who only speaks one language may not realize that there are hundreds of different consonants and vowels spoken by humans in different parts of the world This book will introduce the reader to almost every sound spoken by man Since the English alphabet is inadequate to represent every speech sound known to man the reader will be taught the International Phonetic Alphabet IPA This is a special alphabet containing numerous symbols that represent sounds for all languages Charts are included in the back of this book

that list many of the symbols used in the IPA Some IPA symbols will look quite familiar but others are from foreign languages or were invented specially for the IPA Learning these symbols and their corresponding sounds is the foundation to accurately learning the sound system of a language The reader should also be aware of the fact that not all linguists follow the IPA conventions Though this book generally follows the standard IPA alternative symbols and notations will be explained throughout the text This book is intended for speakers of American English because many of the sounds are compared to the English language Speakers of other dialects or languages may need to adjust their pronunciation accordingly
