Makers Of Britain Pioneers Of The Industrial Age:

Britain's Industrial Revolution in 100 Objects John Broom, 2023-02-22 The period of Britain's Industrial Revolution was perhaps the most transformative era in the nation's history. Between about 1750 and 1914 life and work, home and school, church and community changed irreversibly for Britain's rapidly expanding population. Lives were transformed, some for the better but many endured abysmal domestic and workplace conditions. Eventually improvements were made to Britain's social fabric which led to the prospect of richer and more fulfilled lives for working men, women and even children. Focusing on 100 objects that either directly influenced or arose from these changes, John Broom offers a distinctive insight into this fascinating age. With plentiful illustrations and suggestions for visits to hundreds of places of historical interest, this book makes an ideal companion for a journey into Britain's industrial past.

The Early Pioneers of Steam Stuart Hylton, 2019-11-22 We think of the Stephenson and Brunel as the fathers of the railways and their Liverpool and Manchester and Great Western Railways as the prototypes of the modern systems. But who were the railways' grandfathers and great grandfathers? The rapid evolution of the railways after 1830 depended on the juggernauts of steam locomotion being able to draw upon centuries of experience in using and developing railways and of harnessing the power of steam. Giants, the Stephenson and others may have been, but they stood upon the foundations built by many other considerable if lesser known talents. This is the story of those early pioneers of steam.

Fischer and his Diary of Industrial England* W.O. Henderson,2013-11-05 This book was first published in 1966 It was surprising that so small and so remote a country as Switzerland should have played such an important part in the industrial revolution on the Continent in the nineteenth century A lack of natural resources and basic raw materials and population of 1 687 000 in 1817 faraway trade ports and until 1848 no real central government with the administrative structure to support expansion of manufacturers However the people were hardworking thrifty and high standards of workmanship and had good relations with France and Germany which saw the watchmakers silkweavers and chocolate crafters start to thrive Johann Conrad Fischer was typical of the entrepreneurs

Wyatt III, 2008-11-30 The Industrial Revolution that began in Great Britain in the mid-seventeenth century transformed the British economy and later the economies of Western Europe and the U.S. from a rural agricultural system into an industrial society centered around the factory system of mass production and specialized labor The right mix of social, political and legal conditions in Britain at the time led to the discovery of labor The right mix of social, political and legal conditions in Britain at the time led to the discovery of fresh sources of power and energy and to advances in agriculture, manufacturing, communication and transportation Notable results included the steam engine which made possible everything from textile factories to railroads and later in the U.S. the cotton gin, electric light and automobiles This comprehensive volume explores all these events and more including the aftermath of the Revolution its spread beyond Britain and the U.S. to Asia and throughout the world allowing for a higher standard of living while challenging that standard with increased pollution and health problems a widened economic and social class gap and a weakening of traditional family structure Biographical sketches of key figures a chronology of events primary document excerpts from the period and a print and nonprint source bibliography supplement the work **The Industrial Pioneer**, 1921 **British Industrial Capitalism Since The Industrial Revolution** Roger Lloyd-Jones, Merv Lewis, 2014-05-22 The authors use a long wave framework to examine the historical evolution of British industrial capitalism since the late 18th century and present a challenging and distinctive economic history of modern and contemporary Britain The book is intended for undergraduate courses on the economic history of modern Britain within history, economic and social history, economic history and economic degree schemes and economic theory courses Getting and Staying Productive Roger W. Morrison-Low, 2017-03-02 At the start of the Industrial Revolution it appeared that most scientific instruments were made and sold in London but by the time of the Great Exhibition in 1851 a number of provincial firms had the self-confidence to exhibit their products in London to an international audience How had this change come about and why This book looks at the four main and two lesser English centres known

for instrument production outside the capital Birmingham Liverpool Manchester and Sheffield along with the older population centres in Bristol and York Making wide use of new sources Dr Morrison Low curator of history of science at the National Museums of Scotland charts the growth of these centres and provides a characterisation of their products New information is provided on aspects of the trade especially marketing techniques sources of materials tools and customer relationships From contemporary evidence she argues that the principal output of the provincial trade with some notable exceptions must have been into the London marketplace anonymously and at the cheaper end of the market She also discusses the structure and organization of the provincial trade and looks at the impact of new technology imported from other closely allied trades By virtue of its approach and subject matter the book considers aspects of economic and business history gender and the family the history of science and technology material culture and patterns of migration It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government In bringing together this wide range of interests Dr Morrison Low enables us to appreciate how central the making selling and distribution of scientific instruments was for the Industrial Revolution
