Richard James Lazarus

Making Of Environmental Law:

The Making of Environmental Law Richard J. Lazarus, 2008-09-15 The unprecedented expansion in environmental regulation over the past thirty years at all levels of government signifies a transformation of our nation's laws that is both palpable and encouraging. Environmental laws now affect almost everything we do from the cars we drive and the places we live to the air we breathe and the water we drink. But while enormous strides have been made since the 1970s, gaps in the coverage, implementation and enforcement of the existing laws still leave much work to be done. In *The Making of Environmental Law*, Richard J. Lazarus offers a new interpretation of the past three decades of this area of the law, examining the legal, political, cultural and scientific factors that have shaped and sometimes hindered the creation of pollution controls and natural resource management laws. He argues that in the future, environmental law must forge a more nuanced understanding of the uncertainties and trade-offs as well as the better organized political opposition that currently dominates the federal government. Lazarus is especially well equipped to tell this story given his active involvement in many of the most significant moments in the history of environmental law as a litigator for the Justice Department's Environment and Natural Resources Division, an assistant to the Solicitor General and a member of advisory boards of the U.S. Environmental Protection Agency, the World Wildlife Fund and the Environmental Defense Fund. Ranging widely in his analysis, Lazarus not only explains why modern environmental law emerged when it did and how it has evolved, but also points to the ambiguities in our current situation. As the field of environmental law grays with middle age, Lazarus's discussions of its history, the lessons learned from past legal reforms and the challenges facing future lawmakers are both timely and invigorating.

The Making of Environmental Law Richard James Lazarus, 2004 The unprecedented expansion in environmental regulation since 1970 at all levels of the government signifies an extraordinary transformation of our nation's law. How environmental law emerged, why it has since evolved in the way that it has, and what are the challenges presented as environmental law moves now into its middle age is a fascinating and revealing story which *The Making of Environmental Law* seeks to tell. The story shows how fashioning pollution control laws presents special challenges both because of the nature of pollution itself and the known means of pollution control and because of our nation's varied processes for lawmaking and the ways those processes relate to important cultural norms. Many of these challenges relate to the varied, complex and uncertain spatial and temporal dimensions of pollution itself, factors which resist simple redress. The purpose of *The Making of Environmental Law* is to describe these challenges, relate them to actual events which occurred during the past three decades and discuss what lessons can be gleaned from those decades to meet those same challenges today and in the future. The book is accordingly divided into three parts. Part I, consisting of three chapters, provides a theoretical overview of the challenges presented by environmental protection for lawmaking. The first two chapters describe the relevant physical features of the natural environment and its transformation by humankind with emphasis on their spatial and temporal dimensions that especially

challenge the fashioning of legal rules The third chapter analyzes in more detail how these features relate to the structure of U S lawmaking institutions in federal state and tribal sovereign authorities and within all three branches of government Part II is more explanatory in nature It relates the more theoretical analytic framework regarding the nature of environmental lawmaking Developed in Part I to the actual events surrounding modern environmental law s evolution during the 1960s 1970 1980s and 1990s Finally Part III is more critical and speculative in character than either Part I or II The first chapter of Part III considers the current state of environmental law including both how environmental protection law has evolved during the past three decades and how those evolutionary trends reflect the features of the ecological problems environmental law seeks to address The second chapter in Part III considers the ways in which environmental law is likely to continue to be challenged in the future especially by ever changing conceptions of time and space The third and final chapter of Part III considers the potential historical significance of current times given the unprecedented ascendancy to dominant positions in both the federal legislative and executive branches of government officials who favor major reforms of existing environmental laws

Decision Making in Environmental Law LeRoy Paddock, Robert L. Glicksman, Nicholas S. Bryner, 2016 Environmental issues are at the heart of some of the most complex and consequential decisions that society must face in pursuit of a more sustainable future They encompass the international national and local levels and engage all branches of government Decision Making in Environmental Law one of the constituent volumes in the Elgar Encyclopedia of Environmental Law brings together some of the leading experts in the field and provides a structured overview of the various dimensions of decision making from an environmental law perspective Topics include the use of treaties common law tools rulemaking access to information regulatory structures market based and trading mechanisms monitoring and reporting voluntary programs and private regulation environmental impact analysis public engagement and environmental justice administrative and judicial review and the role of environmental courts and tribunals
