Making Geometry Come Alive Student Activities And Teacher Notes:

Making Geometry Come Alive Alfred S. Posamentier, 2000-07-22 Activities in Geometry is a set of versatile enrichment exercises that covers a very broad range of topics in geometry Euclidean post Euclidean and non Euclidean Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to students and show them that there is much more to geometry than proving theorems To demonstrate this aspect of geometry it is necessary for the investigation to be quite different from what students encounter in their basal texts different in both substance and form Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject

Making Algebra Come Alive Alfred S. Posamentier, 2000-07-21 Activities in Algebra is a set of versatile enrichment exercises that covers a very broad range of mathematical topics and applications from the Moebius strip to the googol Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to people who thought they didn't like mathematics To accomplish this it is necessary for the activities to be quite different from what students encounter in their basal texts different in both substance and form This seems especially critical no matter how excellent a basal text is being used nearly every class experiences the blahs Unfortunately this sort of boredom is often well entrenched long before the teacher and perhaps even the students are aware of it Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject

Making Pre-Algebra Come Alive Alfred S. Posamentier, 2000-07-21 Activities in Pre Algebra is a set of versatile enrichment exercises that covers a very broad range of mathematical topics and applications from the Moebius strip to the googol Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows

teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to people who thought they didn't like mathematics To accomplish this it is necessary for the activities to be quite different from what students encounter in their basal texts different in both substance and form This seems especially critical no matter how excellent a basal text is being used nearly every class experiences the blahs Unfortunately this sort of boredom is often well entrenched long before the teacher and perhaps even the students are aware of it Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject **Resources in Education** ,2001

The Secrets of Triangles Alfred S. Posamentier,Ingmar Lehmann,2012-08-28 Requiring no more than a knowledge of high school mathematics and written in clear and accessible language this book will give all readers a new insight into some of the most enjoyable and fascinating aspects of geometry Everyone knows what a triangle is yet very few people appreciate that the common three sided figure holds many intriguing secrets For example if a circle is inscribed in any random triangle and then three lines are drawn from the three points of tangency to the opposite vertices of the triangle these lines will always meet at a common point no matter what the shape of the triangle This and many more interesting geometrical properties are revealed in this entertaining and illuminating book about geometry Flying in the face of the common impression that mathematics is usually dry and intimidating this book proves that this sometimes daunting abstract discipline can be both fun and intellectually stimulating The authors two veteran math educators explore the multitude of surprising relationships connected with triangles and show some clever approaches to constructing triangles using a straightedge and a compass Readers will learn how they can improve their problem solving skills by performing these triangle constructions The lines points and circles related to triangles harbor countless surprising relationships that are presented here in a very engaging fashion **The Mathematical Gazette** ,2001 *Bibliographic Guide to Education* ,2001 lists publications cataloged by Teachers College Columbia University supplemented by The Research Libraries of The New York Public Library Books In Print 2004-2005 Ed Bowker Staff,Staff Bowker, Ed,2004 The British National Bibliography Arthur James Wells,2001 **Strengths-Based Teaching and Learning in Mathematics** Beth McCord Kobett,Karen S. Karp,2020-02-27 This book is a game changer Strengths Based Teaching and Learning in Mathematics 5 Teaching Turnarounds for Grades K 6 goes beyond simply providing information by sharing a pathway for changing practice Focusing on our students strengths should be routine and can be lost in the day to day teaching demands A teacher using these approaches can change the trajectory of students lives forever All teachers need this resource Connie S Schrock Emporia State University National Council of Supervisors of Mathematics President 2017 2019 NEW COVID RESOURCES ADDED A Parent's Toolkit to Strengths Based Learning in Math is now available on the book's companion website to support families engaged in math learning at home This toolkit provides a variety of home based activities and games for families to engage in

together Your game plan for unlocking mathematics by focusing on students strengths We often evaluate student thinking and their work from a deficit point of view particularly in mathematics where many teachers have been taught that their role is to diagnose and eradicate students misconceptions But what if instead of focusing on what students don t know or haven t mastered we identify their mathematical strengths and build next instructional steps on students points of power Beth McCord Kobett and Karen S Karp answer this question and others by highlighting five key teaching turnarounds for improving students mathematics learning identify teaching strengths discover and leverage students strengths design instruction from a strengths based perspective help students identify their points of power and promote strengths in the school community and at home Each chapter provides opportunities to stop and consider current practice reflect and transfer practice while also sharing Downloadable resources activities and tools Examples of student work within Grades K 6 Real teachers notes and reflections for discussion It s time to turn around our approach to mathematics instruction end deficit thinking and nurture each student s mathematical strengths by emphasizing what makes them each unique and powerful
