**The Making of Green Knowledge** Andrew Jamison, 2001-11-29 A comprehensive introduction to the politics of the environment and the development of environmental knowledge

The Politics of Green Transformations Ian Scoones, Melissa Leach, Peter Newell, 2015-01-09 Multiple green transformations are required if humanity is to live sustainably on planet Earth Recalling past transformations this book examines what makes the current challenge different and especially urgent It examines how green transformations must take place in the context of the particular moments of capitalist development and in relation to particular alliances The role of the state is emphasised both in terms of the type of incentives required to make green transformations politically feasible and the way states must take a developmental role in financing innovation and technology for green transformations The book also highlights the role of citizens as innovators entrepreneurs green consumers and members of social movements Green transformations must be both top down involving elite alliances between states and business but also bottom up pushed by grassroots innovators and entrepreneurs and part of wider mobilisations among civil society The chapters in the book draw on international examples to emphasise how contexts matter in shaping pathways to sustainability Written by experts in the field this book will be of great interest to researchers and students in environmental studies international relations political science development studies geography and anthropology as well as policymakers and practitioners concerned with sustainability

Christopher Rootes, 2003 Based upon an analysis of the protest events reported in one quality newspaper in each of eight countries during the ten years 1988 to 1997 this is the first systematically comparative study of environmental protest in a representative cross section of EU member states It breaks entirely new ground in the study of environmental politics in Europe and is a major contribution to the study of protest events

*Climate Change, Capitalism, and Corporations* Christopher Wright, Daniel Nyberg, 2015-10 Written for researchers and graduate students this book explores the different processes through which corporations engage with climate change

*Social-Ecological Transformation* Karl Bruckmeier, 2016-06-03 This book advances a social ecological theory to reconnect nature and society through sustainable transformation of interacting social and ecological systems Social ecology develops as an interdisciplinary science by using knowledge from the social sciences especially sociology and economics and from natural scientific ecology Knowledge integration across the boundaries of social and natural sciences is not widespread blocked by the specialisation of theories and their competing forms of explanation and interpretation Chapters in this book describe a new social ecological theory that connects concepts and theories from both sides to create a new interdisciplinary theory Inter and transdisciplinary

knowledge synthesis creates possibilities to analyse global environmental problems more systematically by integrating specialized research on environmental problems The author uses social ecological theory to analyse and explain problems and processes of global change in modern society such as climate change and adaptation to it ecosystem change and transformation of the industrial energy regime finally offering pathways of transformation to a future sustainable society

*Environment and Democracy in the Czech Republic* Adam Fagan, 2004-01-01 the book's contents will appeal to academics working within the fields of environmental politics or central and east European studies as well as to political or social scientists with an interest in SMO development David Benson *Environmental Politics* *Environment and Democracy in the Czech Republic* is a succinct well written and scrupulously researched book Sean Hanley *Europe Asia Studies* this book provides a well researched survey of the development of the environmental movement in the Czech Republic and of its role in relation to the democratic transition process For scholars and students looking at environmental politics in Central and Eastern Europe it provides a wealth of information that will be useful in conducting comparative studies Alberto Costi *European Environment* Fagan has written a well researched analysis of the evolving role and status of Czech EMOs since the overthrow of communism John M Kramer *Slavic Review* This volume presents an original study of the development of the environmental movement in the Czech Republic particularly in relation to the democratic transition process It offers a broad historical analysis of the evolution of the movement through the 1990s to the present day and presents rich case studies on a number of environmental organisations The detailed empirical work reveals interesting insights into the character of contemporary Czech politics and the difficulties faced by the environmental movement This is a well researched and well written piece of work which will make a valuable contribution to the existing literature James Meadowcroft *University of Sheffield UK* Since a handful of environmental activists helped to bring down the communist regime in Czechoslovakia the arena of environmental politics has offered a valuable lens on the transition process providing a unique insight into the contradictory and highly contingent relationship between democratisation and neo liberalism *Environment and Democracy in the Czech Republic* offers a radical perspective on the democratisation process revealing the extent to which the consolidation of a politically efficacious and diverse civil society is far more complex than the earlier generation of commentators acknowledged The environmental movement has not flourished under political democracy its radical activists have been marginalized and targeted by the state their ideologies and strategies compromised and their critical voice silenced Yet the book concludes that whilst the mainstream environmental movement has become institutionalised and appears incapable of representing community interests the environmental issue retains the capacity to mobilise this time against the neo liberal agenda of the democratic government This definitive account of the evolution of the Czech environmental movement since 1990 offers a radical evaluation of the institutions and practice of political democracy and challenges some of the certainties of social movement theory Although focused on the Czech Republic the book will

undoubtedly contribute to a better understanding of the role of environmental movements within contemporary politics throughout the world. It will be welcomed by political and social scientists with an interest in Central and Eastern Europe and academics and students with an interest in environmental politics.

**Histories of Technology, the Environment and Modern Britain**

Jon Agar, Jacob Ward, 2018-04-09. *Histories of Technology, the Environment and Modern Britain* brings together historians with a wide range of interests to take a uniquely wide lens view of how technology and the environment have been intimately and irreversibly entangled in Britain over the last 300 years. It combines for the first time two perspectives with much to say about Britain since the industrial revolution: the history of technology and environmental history. Technologies are modified environments just as nature is to varying extents engineered. Furthermore, technologies and our living and non-living environment are both predominant material forms of organisation and self-organisation that surround and make us. Both have changed over time in intersecting ways. Technologies discussed in the collection include bulldozers, submarine cables, automobiles, flood barriers, medical devices, museum displays, and biotechnologies. Environments investigated include bogs, cities, farms, places of natural beauty, and pollution land and sea. The book explores this diversity but also offers an integrated framework for understanding these intersections.

**Environmental Planning in Context** Iain White, 2017-08-24. This innovative introduction to environmental planning is designed for an international readership. Each of the book's chapters focuses on a key question in environmental planning and works through principles which are appropriate in any national context. Case studies from around the world show how the principles apply in practice.

**Winds of Change** Ion Bogdan Vasi, 2011-01-12. In recent decades the global wind energy industry has undergone explosive growth and there is still vast potential for wind to supply more of the world's energy. Though not only is wind power far from reaching its potential, its rise has been uneven and irregular. What factors influence the development of the wind energy industry and why has it developed successfully in some places but not in others? In *Winds of Change* Ion Bogdan Vasi argues that the development of wind energy is dependent not only on improvements in technology and economic forces but also in large part on the efforts of the environmental movement. Vasi defines and analyses three pathways through which the environmental movement has contributed to industry growth: it has influenced the adoption and implementation of renewable energy policies, created consumer demand for clean energy, and changed the institutional logics of the energy sector. Vasi uses quantitative analysis to present the big picture of global wind power development and qualitative research to understand why certain countries are world leaders in wind energy while others are relatively underdeveloped. Through interviews with renewable energy professionals and campaigners, he shows that environmental groups and activists participated actively in energy policymaking, pressured various organizations to purchase wind power, and formed new companies that specialized in wind farm development. He also demonstrates that environmentalists contributed to wind turbine manufacturing by becoming entrepreneurs, innovators, and advocates. *Winds of Change* sheds much new light on how wind energy is adopted and why and

demonstrates how activists and social movements can contribute to the creation of new industries      Economics and Sustainability Karl Bruckmeier, 2020-11-21 This textbook provides an overview of economic perspectives on sustainability It synthesises economic ecological and interdisciplinary sustainability research and by applying an integrated social ecological and economic framework demonstrates how this research can be improved and implemented in practice Split into three parts the book begins by introducing a range of topics forming the basis of knowledge needed to understand the varying sustainability discourses in economics ecology and interdisciplinary sustainability research Chapters cover the political context of sustainability the history of sustainability in European environmental discourses dating back to the seventeenth century as well as various problems and forms of interdisciplinary knowledge integration and synthesis in the sustainability process Part II reviews the core economic themes relevant to sustainable development including natural resource management environmental economics and ecological economics Also highlighted are often neglected issues such as conflicts disasters and interrelated crises on the way towards sustainability The chapters in Part III discuss the future of the sustainability process They argue for the necessity of overhauling the relationship between science and practice explore failures and the unforeseen difficulties of sustainability transformation and discuss how to enable a long term sustainability process that reaches into the distant future An innovative resource for a broad range of interdisciplinary programmes on sustainability The book will be an invaluable reference for master and PhD students instructors researchers and practitioners in sustainability governance      **Terania Creek and the Forging of Modern Environmental Activism** Vanessa

Bible, 2018-01-09 This book tells the story of Terania Creek the world's first direct action blockade in defence of a forest occurring in Australia in 1979 Contrary to claims that the Australian counterculture was a mere imitation of overseas models the Australian movement coalescing with a home grown environment movement came of age at Terania Creek After five years of polite campaigning failed to stop the logging of ancient Gondwanan rainforest an organic and spontaneous blockade erupted that would see the forging of a number of ingenious blockading techniques and strategies The activist repertoire developed at Terania Creek has since echoed across the country and across the Earth This book draws on extensive oral history interviews as well as photographs taken of the protest in 1979 such rich source material brings the story to life Terania Creek and the Forging of Modern Environmental Activism will therefore appeal to both a scholarly audience as well as activists practitioners and counterculturalists      Territorial Policy and Governance Iain Deas, Stephen Hincks, 2017-02-24 In response to both policy and conceptual debates alternative narratives have begun to emerge about territorial governance and policymaking As local and regional policy actors strive to respond to the geographically uneven effects of the economic crises of the early twenty first century a crucial question emerges what are the opportunities and challenges presented by alternative forms of territorially based governance and policy The aim of this edited volume therefore is critically to explore the opportunities and challenges presented by different forms of territorial policy and governance Drawing on conceptual

debates and empirical research from the United Kingdom and other international contexts the contributors engage with issues around the politics and governance of territorial development economic development planning and regeneration and the environment Territorial Policy and Governance addresses the question of how alternative forms of territorial governance and policy can help to shape patterns of urban and regional development highlighting the related opportunities constraints and challenges that confront their operationalisation This book will be essential reading for international audiences with an interest in territorial development governance politics human geography and planning and regeneration Representing the Environment John R. Gold, George Revill, 2004-08-02 This is an introductory guide to the representations of the environment found in everyday life in nature culture landscape art and in the media These provide an important means of understanding environmental attitudes and decision making **Cycling and Recycling** Ruth Oldenziel, Helmuth Trischler, 2015-12-01 Technology has long been an essential consideration in public discussions of the environment with the focus overwhelmingly on creating new tools and techniques In more recent years however activists researchers and policymakers have increasingly turned to mobilizing older technologies in their pursuit of sustainability In fascinating case studies ranging from the Early Modern secondhand trade to utopian visions of human powered vehicles the contributions gathered here explore the historical fortunes of two such technologies bicycling and waste recycling tracing their development over time and providing valuable context for the policy successes and failures of today **Parties, Governments and Elites** Philipp Harfst, Ina Kubbe, Thomas Poguntke, 2017-04-26 Parties governments and elites are at the core of the study of democracy The traditional view is that parties as collective actors play a paramount role in the democratic process However this classical perspective has been challenged by political actors observers of modern democracy as well as political scientists Modern political parties assume different roles contemporary leaders can more heavily influence politics governments face new constraints and new collective bodies continue to form propose new ways of participation and policy making and attract citizens and activists In the light of these observations the comparative study of democracy faces a number of important and still largely unsolved questions that the present volume will address Climate Action in a Globalizing World Carl Cassegard, Linda Soneryd, Hakan Thorn, Asa Wettergren, 2017-05-18 The existence and urgency of global climate change is a matter of scientific consensus Yet the global politics of climate change have been anything but consensual In this context a wave of global climate activism has emerged in the last decade in response to the perceived failure of the political negotiations This book provides a unique comparative study of environmental movements in USA Japan Denmark and Sweden analyzing their interaction with the international climate institutions of the United Nations with national governments and with currents in the global climate movement It documents how and why the movement evolved between the Copenhagen Summit of 2009 and the Paris Summit of 2015 altering its strategies and tactics while attracting new actors to the issue area Further it demonstrates how the development of global environmental networks has

increased contact between environmental movements in the Global North and those from the Global South resulting in the establishment of climate justice as a political cause and unifying frame for global climate activism      Utopia: Social Theory and the Future Keith Tester, Michael Hviid Jacobsen, 2016-02-17 In the light of globalization's failure provide the universal panacea expected by some of its more enthusiastic proponents and the current status of neo liberalism in Europe a search has begun for alternative visions of the future alternatives to the free market and to rampant capitalism Indeed although these alternatives may not be conceived of in terms of being a perfect order there does appear to be a trend towards utopian thinking as people including scholars and intellectuals search for inspiration and visions of better futures If as this search continues it transpires that politics has little to offer then what might social theory have to contribute to the imagination of these futures Does social theory matter at all What resources can it offer this project of rethinking the future Without being tied to any single political platform Utopia Social Theory and the Future explores some of these questions offering a timely and sustained attempt to make social theory relevant through explorations of its resources and possibilities for utopian imaginations It is often claimed that utopian thought has no legitimate place whatsoever in sociological thinking yet utopianism has remained part and parcel of social theory for centuries As such in addition to considering the role of social theory in the imagination of alternative futures this volume reflects on how social theory may assist us in understanding and appreciating utopia or utopianism as a special topic of interest a special subject matter a special analytical focus or a special normative dimension of sociological thinking Bringing together the latest work from a leading team of social theorists this volume will be of interest to sociologists social and political theorists anthropologists and philosophers      Environmental Debates and the Public in Ireland Mary Kelly, 2007      **Science Transformed?** Alfred Nordmann, Hans Radder, Gregor Schiemann, 2014-08-10 Advancements in computing instrumentation robotics digital imaging and simulation modeling have changed science into a technology driven institution Government industry and society increasingly exert their influence over science raising questions of values and objectivity These and other profound changes have led many to speculate that we are in the midst of an epochal break in scientific history This edited volume presents an in depth examination of these issues from philosophical historical social and cultural perspectives It offers arguments both for and against the epochal break thesis in light of historical antecedents Contributors discuss topics such as science as a continuing epistemological enterprise the decline of the individual scientist and the rise of communities the intertwining of scientific and technological needs links to prior practices and ways of thinking the alleged divide between mode 1 and mode 2 research methods the commodification of university science and the shift from the scientific to a technological enterprise Additionally they examine the epochal break thesis using specific examples including the transition from laboratory to real world experiments the increased reliance on computer imaging how analog and digital technologies condition behaviors that shape the object and beholder the cultural significance of humanoid robots the erosion of scientific quality in experimentation and the effect of computers

on prediction at the expense of explanation Whether these events represent a historic break in scientific theory practice and methodology is disputed What they do offer is an important occasion for philosophical analysis of the epistemic institutional and moral questions affecting current and future scientific pursuits
