Mature Heart:

Basic and Clinical Neurocardiology J. Andrew Armour, Jeffrey L. Ardell, 2004-05-06 The progression of heart disease is associated with changes in the neurohumoral mechanisms that control cardiac function The degree to which this neurohumoral remodeling occurs even before overt signs of cardiac disease become manifest is important for prognosis To determine why some patients experience sudden death while others sustain life in the presence of severely compromised cardiac function the neuronal control of cardiac electrical and mechanical events must be considered Starting at the level of individual neurons and building upwards this book describes the synergistic interactions that occur among intrathoracic and CNS feedback loops to permit precise control of regional cardiac behavior On this basic science foundation subsequent clinical chapters explore the remodeling that occurs in this system with aging with the evolution of specific cardiac pathologies and with the psychological concomitants of heart disease Most importantly these chapters provide unique insights into how specific therapies like beta andadrenergic receptor blockade not only affect cardiomyocytes directly but also mitigate the adverse neurohumoral changes that accompany disease processes such as heart failure and essential hypertension The paradigm advanced in this volume is that heart disease is a multifaceted phenomenon involving the interplay of neurohumoral cardiomyocyte and structural elements each of which depends on the other With our cumulative understanding of these interdependent processes new avenues for time appropriate targeted methods of treating heart diseases can be developed

Handbook of Cardiac Anatomy, Physiology, and Devices Paul A. Iaizzo, 2010-03-11 A revolution began in my professional career and education in 1997 In that year I visited the University of Minnesota to discuss collaborative opportunities in cardiac anatomy physiology and medical device testing The meeting was with a faculty member of the Department of Anesthesiology Professor Paul Iaizzo I didn't know what to expect but as always I remained open minded and optimistic Little did I know that my life would never be the same During the mid to late 1990s Paul Iaizzo and his team were performing anesthesia research on isolated guinea pig hearts We found the work appealing but it was unclear how this research might apply to our interest in tools to aid in the design of implantable devices for the cardiovascular system As discussions progressed we noted that we would be far more interested in reanimation of large mammalian hearts in particular human hearts Paul was confident this could be accomplished on large hearts but thought that it would be unlikely that we would ever have access to human hearts for this application We shook hands and the collaboration was born in 1997 In the same year Paul and the research team at the University of Minnesota including Bill Gallagher and Charles Soule reanimated several swine hearts Unlike the previous work on guinea pig hearts which were reanimated in Langendorff mode the intention of this research was to produce a fully functional working heart model for device testing and cardiac research

Avery's Neonatology Mhairi G. MacDonald, Mary M. Seshia, 2015-07-29 The practice

of neonatology requires a careful balance between modern technology and the prevention of unintended damage to a newborn. Early therapeutics were based on adult medicine with often catastrophic results to the baby. As research and understanding of physiology and therapeutics have expanded, care of the preterm and sick infant has improved drastically.

Avery's Neonatology is a practical guide to understanding the pathophysiology of the newborn so that appropriate treatment decisions can be made.

A Panoramic History of Traditional Chinese Ethics Yi-ting ZHU (尹廷朱), 2021-06-02. This book traces the trajectory of traditional Chinese ethics from West Zhou Dynasty 1046-771 BC through Qing Dynasty 1616-1912 and covers a myriad of Chinese philosophers who have expressed their ideas about the relationships between Heavenly Dao vs Earthly Dao, Good vs Evil, Morality vs Legality, Knowledge vs Behavior, Motive vs Result, Righteousness vs Profitability, Rationality vs Animality. In this book, the readers can find Confucius's discussion on Rite and Benevolence, Lao Zi's meditation on Inaction of Great Dao, Zhuang Zi's elaboration on Transcendental Freedom, Mohist utilitarian Universal Love, and Mencian theory of Primordial Good Humanity, to name just a few phenomenal figures. A compact yet elaborate panoramic yet profound guidebook to traditional Chinese ethical thought, this book is an excellent window to showcase traditional Chinese mental and spiritual legacy. Composed, translated, and proofread by brilliant scholars, it produces a fluent and coherent English discourse of Chinese morality and ethics, nimbly spinning together the threads of Confucianism, Taoism, Buddhism, and other ideological schools, with brief references to the historical situation. Consequently, it provides English readers, especially those curious about Chinese psychology and rationality, with thought-provoking and horizon-expanding perspectives and provides Chinese readers, especially those of philosophy and translation, with a great number of typical and characteristic quotes of archaic Chinese that have never been translated before. Ultimately, it is a fundamental threshold to learning about Chinese people, Chinese culture, Chinese morality, Chinese mentality, Chinese policy, and Chinese diplomacy.
