NEHRP Guidelines for the Seismic Rehabilitation of Buildings, 1997 *NEHRP Guidelines for the Seismic Rehabilitation of Buildings* Building Seismic Safety Council (U.S.), Applied Technology Council, United States. Federal Emergency Management Agency, États-Unis. Federal Emergency Management Agency, 1997 **Example Applications of the NEHRP Guidelines for the Seismic Rehabilitation of Buildings**, 1999 **NEHRP Commentary on the Guidelines for the Seismic Rehabilitation of Buildings** Eugene Zeller, 2000-06 This document from the National Earthquake Hazards Reduction Program NEHRP was prepared for the Building Seismic Safety Council BSSC with funding from the Federal Emergency Management Agency FEMA It provides commentary on the NEHRP Guidelines for the Seismic Rehabilitation of Buildings It contains systematic guidance enabling design professionals to formulate effective reliable rehabilitation approaches that will limit the expected earthquake damage to a specified range for a specified level of ground shaking This kind of guidance applicable to all types of existing buildings in all parts of the country has never existed before Illustrated

NEHRP Guidelines for the Seismic Rehabilitation of Buildings, 1999 *NEHRP Guidelines for the Seismic Rehabilitation of Buildings*, 1997 The major objectives of the project were to develop a set of technically sound nationally applicable guidelines with commentary for the seismic rehabilitation of buildings develop building community consensus regarding the guidelines and develop the basis of a plan for stimulating widespread acceptance and application of the guidelines The guidelines documents produced as a result of this project are expected to serve as a primary resource on the seismic rehabilitation of building for the use of design professionals educators model code and standards organisations and state and local building regulatory personnel *Seismic Assessment and Retrofit of Reinforced Concrete Buildings* fib Fédération internationale du béton, 2003-08-01 In most parts of the developed world the building stock and the civil infrastructure are ageing and in constant need of maintenance repair and upgrading Moreover in the light of our current knowledge and of modern codes the majority of buildings stock and other types of structures in many parts of the world are substandard and deficient This is especially so in earthquake prone regions as even there seismic design of structures is relatively recent In those regions the major part of the seismic threat to human life and property comes from old buildings Due to the infrastructure's increasing decay frequently combined with the need for structural upgrading to meet more stringent design requirements especially against seismic loads structural retrofitting is becoming more and more important and receives today considerable emphasis throughout the world In response to this need a major part of the fib Model Code 2005 currently under development is being devoted to structural conservation and maintenance More importantly in recognition of the importance of the seismic threat arising from existing substandard buildings the first standards for structural upgrading to be promoted by the international engineering community and by regulatory authorities alike are for seismic rehabilitation of buildings This is the case for example of Part 3 Strengthening and Repair of Buildings of Eurocode 8

ie of the draft European Standard for earthquake resistant design and which is the only one among the current 2003 set of 58 Eurocodes attempting to address the problem of structural upgrading It is also the case of the recent 2001 ASCE draft standard on Seismic evaluation of existing buildings and of the 1996 Law for promotion of seismic strengthening of existing reinforced concrete structures in Japan As noted in Chapter 1 of this Bulletin fib as CEB and FIP did before has placed considerable emphasis on assessment and rehabilitation of existing structures The present Bulletin is a culmination of this effort in the special but very important field of seismic assessment and rehabilitation It has been elaborated over a period of 4 years by Task Group 7.1 Assessment and retrofit of existing structures of fib Commission 7 Seismic design a truly international team of experts representing the expertise and experience of all the important seismic regions of the world In the course of its work the team had six plenary two day meetings in January 1999 in Pavia Italy in August 1999 in Raleigh North Carolina in February 2000 in Queenstown New Zealand in July 2000 in Patras Greece in March 2001 in Lausanne Switzerland and in August 2001 in Seattle Washington In October 2002 the final draft of the Bulletin was presented to public during the 1st fib Congress in Osaka It was also there that it was approved by fib Commission 7 Seismic Design The contents is structured into main chapters as follows 1 Introduction 2 Performance objectives and system considerations 3 Review of seismic assessment procedures 4 Strength and deformation capacity of non seismically detailed components 5 Seismic retrofitting techniques 6 Probabilistic concepts and methods 7 Case studies

Planning for Seismic Rehabilitation
Eugene Zeller, 1999-11 Acquaints users with typical problems unrelated to design and construction processes that might arise when planning or engaging in seismic rehab projects and programs Alerts readers to the difficulties inherent in implementing seismic rehab recommendations Emphasizes 2 basic user oriented concepts The first is a process that outlines a set of decision points so the user can determine whether seismic rehab efforts are needed if so their potential scope The 2nd offers a simple escalation ladder to help users understand the degree of conflict inherent in and the implications of choosing what if any seismic rehab strategies to follow

Example Applications of the NEHRP Guidelines for the Seismic Rehabilitation of Buildings, 1999 **Planning for Seismic Rehabilitation**, 1998 Seismic Rehabilitation of Buildings Ugo Morelli, 1999-11 Provides the Federal Emergency Management Agency's Mitigation Directorate with 25 recommended tasks that should be undertaken through the agency's Existing Buildings Program EBP in the coming years The EBP's expanded but continuing mission in seismic rehabilitation is to limit fatalities life threatening injuries property economic losses from earthquakes by increasing the number of seismically resistant buildings in all areas of identified earthquake risk Identifies 4 objectives 25 tasks to help make our building stock less vulnerable to earthquake damage Seeks to provide the continuity necessary for an effective Existing Buildings Program
