Regional input-output study Walter Isard,1971 *Input-Output Analysis* Ronald E. Miller,Peter D. Blair,2009-07-30

This edition of a classic textbook is an essential reference for students and scholars in the input output research and applications community New topics covered include SAMs and extended input output models and their connection to input output data structural decomposition analysis SDA multiplier decompositions identifying important coefficients and international input output models *On the use of input-output models for regional planning* William Shafer,2012-12-06

This book attempts to show in a style acceptable to both academics and hurried planning executives how simple analytic tools may be used to bridge the substantial gap between producing an input output table and using one In pursuing this goal we eschew all discussions of complex programming models for example and concentrate on above all interpretation of the transactions table itself on such common tools as multipliers impact analysis projections models and self sufficiency analysis and on a few innovations such as income per employee indices development simulators and market analysis routines Our primary purpose has been to show how planners both private and public can use regional input output analysis quickly and to their advantage The Georgia Interindustry Study was sponsored by the Office of Planning and Budget and the Department of Industry and Trade of the State of Georgia their support is gratefully acknowledged The final study report of which this book represents a substantial revision benefited enormously from the support and incisive criticisms of Dr William W Nash then with the Office of Planning and Budget his efforts are warmly appreciated Many other officials in Georgia government contributed to this study including Louis Schneider and Kenneth P Johnson in the Office of Planning and Budget James O Bohanan James Butler George Rogers and H W Wiley in the Department of Industry and Trade Joe Woodall and Corine Cross in the Department of Labor William M Nixon in the Department of Audits and J B **Rethinking Input-Output Analysis**

Jan Oosterhaven,2022-06-17 This textbook helps students to understand the social economic and environmental importance of the mutual relations between industries in the same and in different regions and nations and demonstrates how to model these relations using regional interregional and international input output IO models It enables readers to extend these basic IO models with endogenous household expenditures to employ supply use tables SUTs that explicitly distinguish the products used and sold by industry and to use social accounting matrices SAMs that detail the generation redistribution and spending of income In addition to the standard demand driven IO quantity model and its accompanying cost push IO price model the book also discusses the economic assumptions and usefulness of the supply driven IO quantity model and its accompanying revenue pull IO price model The final chapters highlight three main applications of the IO model 1 economic impact analysis of negative supply shocks as caused by for example natural disasters 2 linkages key sector and cluster analysis 3 structural decomposition analysis especially of regional interregional and international growth and demonstrate the strengths and weaknesses of these IO applications Written for graduate students of regional and spatial science as well as for economists

and planners this book provides a better understanding of the foundations the power the applicability and the limitations of input output analysis The second completely revised edition expands on updating IO tables modelling the disaster reconstruction phase and includes an appendix on the necessary matrix algebra
