## **Regional Science Retrospect And Prospect:**

*Regional Science* David Boyce, Peter Nijkamp, Daniel Shefer, 2012-12-06 Regional science as an integrating discipline for many scientific analyses concerning the element of space has a remarkable record of achievements in both breadth and depth. The great many scientific journals in this field and the large number of regional science books mirror the appeal of this discipline in both the developed and the developing world. The scientific organization in this area, the Regional Science Association International, is organizing a world conference every four years. The 1989 Regional Science World Conference was held in an interesting setting viz kibbutz Ramat Rachel on the outskirts of Jerusalem. The organization of this meeting was undertaken by the Israeli Section of the Regional Science Association under the supervision of Professor Rafi Bar El Development Study Center Rehovoth. The meeting turned out to be a great success and provided an extremely interesting cross section of new developments in the area of regional science. It was decided afterward to publish a set of representative papers from this meeting in one volume. The present book brings together these papers which were duly selected after a careful screening and refereeing process. The editors wish to thank all referees for their willingness to assist them in the task of producing this volume. Many thanks also go to Rita Hittema for her skillful copy editing and word processing of the manuscript.

**Regional Science: Retrospect and Prospect** Walter Isard, 1966 **History of Regional Science and the Regional Science Association International** Walter Isard, 2012-12-06 It is difficult if not impossible to establish the point of time at which a new field of study starts to emerge. While the date of formal organization of a society associated with the field can be precisely stated, such timing says little about when and where the seeds for a field's development were planted. Also, such timing says little about the essential why for the development of a field and provides little understanding of the path that it traced. It is clear that the emergence of the field of regional science like many other fields was dependent on a particular setting as well as the pattern of events and interaction of diverse personalities who became involved. As best I can, I shall attempt in this Part I of the History to unravel the where, when, and why questions in the development of Regional Science and the Regional Science Association International. Further in the last section of this essay, I shall briefly point up some potentialities for analytical advances in the field of regional science. Also, I shall note the opportunity for leadership by regional scientists in attacking global and regional development problems thereby to help formulate relevant policy. In this way, I hope to expose the potential for fruitful research by young scholars interested in entering the field. **25**

**[twenty-five] Years of Regional Science** Peter Nijkamp, 1986 *Fifty Years of Regional Science* Raymond Florax, David A. Plane, 2013-04-17 This book contains the complete text of the special Golden Anniversary issue of the flagship journal of the Regional Science Association International, *RSAI Papers in Regional Science*, Volume 83, Number 1, as well as the full text of Walter Isard's Presidential Address. The future near and far of regional science. Professor Isard originally delivered the speech in a special plenary session of the fiftieth North American Meetings of the Regional Science Association International.

The session began with a ceremonial kickoff to the year long celebration of the multidisciplinary field's first 50 years. At the ceremony held on the morning of Friday November 21 2004 at the DoubleTree Hotel in Philadelphia we presented Walter Isard the founder of our multidisciplinary field as well as Antoine Bailly the President of the Regional Science Association International and David Boyce the Association's Archivist with commemorative first copies of the anniversary issue. This book entitled *Fifty Years of Regional Science* consists of a compendium of thought papers authored by a representative sampling of some of the field's leading scholars. For the special journal issue we originally titled the collection *The Brightest of Dawns*.

*New Frontiers in Regional Science* Manas Chatterji, Robert E. Keunne, 1990-06-18 The first in a two volume tribute to Walter Isard the second being *Dynamics and Conflict in Regional structural Change* this book looks at new frontiers in regional science. Together they contain 50 papers by experts in this field and look at subjects such as location theory.

**Management and Regional Science for Economic Development** Manas Chatterji, 2012-12-06 The greatest challenge facing mankind today is the immense disparity in the levels of income among people in different parts of the globe. The growth rate of income of the poor countries is consistently far below the rate of the advanced industrialized nations. Due to low income and a high propensity to consume there is very little left in these countries for investment. A major portion of the resources available is devoted to military expenditures. This continual decline in the standard of living coupled with poverty and unemployment will lead to social and political upheaval in these countries which affects developed countries. Because of high capacity and low population growth the market of the developed countries is already saturated. To maintain the high standard of living in the developed countries it is necessary to have a strong and stable developing world. It is gratifying to see that both groups of countries see the need for peaceful economic growth however the amount of cooperation between countries and the material help from the developed countries are far from satisfactory. The economic and social scientists have investigated the best way to achieve the transformation from a poverty ridden condition to a decent existence. Their studies have proceeded in two different directions. One is a more descriptive historical analysis and the other is theoretical model building. Although these studies have achieved a relatively high level of perfection one significant factor is sometimes missing.

Thematic Encyclopedia of Regional Science Peter Nijkamp, Karima Kourtiti, Kingsley E. Haynes, Zeynep Elburz, 2025-08-11 This thematic Encyclopedia explores the multifaceted world of regional science presenting a systematic and coherent overview of its central topics. It highlights the interdisciplinary nature of the field examining the wide range of concepts theories methods and models that shape spatial oriented approaches to the social sciences. Knowledge,

Networks and Policy James Hopkins, 2015-05-08 The region has been used to understand and propose solutions to phenomena and problems outside the dominant spatial scale of the twentieth century the nation state. Its influence can be seen in multiple social science disciplines and in public policy across the globe. But how was this knowledge organised and how were its concepts transmuted into public policy? This book charts the development of the academic field of Regional

Studies and the application of its concepts in public policy through its learned society the Regional Studies Association In their modern form learned societies often play a complementary role to universities offering networks that operate in the spaces between and beyond universities connecting specialised academics and knowledge and making it possible for them to have impact outside the academy In contrast to the geographically tangible and popularly understood role of the university contemporary learned societies are nebulous networks that transcend barriers and whose contribution is difficult to discern However the production and dissemination of knowledge would be stunted were it not for the learned society connecting scholars through a network of publications and events This book traces the intellectual history of regional studies and regional science from the 1960s into the 2000s and the impact of the regional concept in public policy through the changing priorities of government in the UK and Europe By approaching the history through the Regional Studies Association it interrogates the role and function of the learned society model of organisation in contemporary academia and importance as a knowledge exchange vehicle for public policy influence

**Spatial Economic Science** Aura Reggiani, 2012-12-06 With the dawn of the twenty first century comes the awareness that current rapid political economic social and technological transformations will affect our of living by producing new forms of information communications common way market work style and leisure In this context human behaviour will certainly change its fixed parameters It is likely that the relationships between internal structures and external influences between individual components and collective behaviour as well as between multi scale networks and interrelated dynamics will show spatio temporal patterns which will be difficult to predict by means of our usual tools As a consequence academic research is increasingly being required to play an active role in addressing new ways of understanding and forecasting the sets of interacting structures ranging from the technical to the organizational and from the social to the economic and political levels while at the same time incorporating concerns about the new economy environment society information and technology It is now evident that social science especially spatial and economic scienc needs innovative paths together with continuous cross fertilization among the many disciplines involved In order to investigate these intriguing perspectives we seem to have embarked on an era of methodological reflections rather than developing strong theoretical foundations This volume aims to provide an overview of these new insights and frontiers for theoretical methodological studies and research applications in the space economy

**Modeling Spatial and Economic Impacts of Disasters** Yasuhide Okuyama, Stephanie E. Chang, 2013-06-29 This volume is dedicated to the memory of Barclay G Jones Professor of City and Regional Planning and Regional Science at Cornell University Over a decade ago Barclay took on a fledgling area of study economic modeling of disasters and nurtured its early development He served as the social science program director at the National Center for Earthquake Engineering Research NCEER a university consortium sponsored by the National Science Foundation and the Federal Emergency Management Agency of the United States In this capacity Barclay shepherded and attracted a number of regional scientists to the study of disasters He organized a conference held in the ill fated World Trade Center in September 1995 on The Economic Consequences of Earthquakes Preparing for the Unexpected He persistently advocated the importance of social science research in an establishment dominated by less than sympathetic natural scientists and engineers In 1993 Barclay organized the first of a series of sessions on Measuring Regional Economic Effects of Unscheduled Events at the North American Meetings of the Regional Science Association International RSAI This unusual nomenclature brought attention to the challenge that disasters largely unanticipated often sudden and always disorderly pose to the regional science modeling tradition The sessions provided an annual forum for a growing coalition of researchers where previously the literature had been fragmentary scattered and episodic Since Barclay s unexpected passing in 1997 we have continued this effort in his tradition

*Economics* Roberta Capello, 2017-10-09 The book spans a scientific research program elegantly developed by Roberto Camagni an eminent regional scientist who has offered ground breaking ideas in regional and urban economics throughout his academic career In addition to bringing together a selection of Professor Camagni s most influential works the book presents syntheses and interpretations of his ideas by respected colleagues and by his students In regional economics space as territory which plays an active role in innovation processes and in regional growth patterns territorial capital as a synthetic concept of differentiated regional growth assets and sources of regional competitiveness are only a few of the main ideas that emerged in regional economics thanks to this inspiring mind In urban economics he paved the way towards a new theoretical interpretation of the existence of the city and of its dynamics His theory of city networks overcame the limits of Christaller s and L sch s spatial approach to the city with a solid economic conceptualization of spatial city network structures All theories are accompanied by sound policy analysis helping to contribute to the design and implementation of appropriate spatial policies at the European level

*Economics of Globalisation* Partha Gangopadhyay, Manas Chatterji, 2017-12-01 Globalisation has evolved to become the dominant economic cultural environmental and political phenomenon of our time In economic terms debates now extend beyond concepts of winners and losers to key questions of how to deal with the problems unleashed by globalisation while preserving its benefits However if the benefits of globalisation are fairly shared and the costs properly dealt with a deeper economic understanding of how globalisation is impacting our economic world is needed This important book addresses this task featuring contributions from many of the world s leading economists Seven key aspects of globalisation are considered trans border trade trans border movement of people and capital the emergence of a new international order the homogenization of economic cultures technology and institutions labour market consequences corporate governance issues and prospects for a global society These carefully chosen themes illuminate the complex path that globalisation is following by showing it to be a process consisting of various transitions and subplots the totality of which is closely examined in this comprehensive and authoritative work *Economics of Globalisation* is essential reading for academics researchers policy makers and business professionals

**Being Interdisciplinary** Alan Wilson, 2022-05-03 In *Being Interdisciplinary* Alan Wilson draws on five decades as a leading figure in urban science to set out a systems approach to interdisciplinarity for those conducting research in this and other fields He argues that most research is interdisciplinary at base and that a systems perspective is particularly appropriate for collaboration because it fosters an outlook that sees beyond disciplines There is a more subtle thread too A systems approach enables researchers to identify the game changers of the past as a basis for thinking outside convention for learning how to do something new and how to be ambitious in a nutshell how to be creative Ultimately the ideas presented address how to do research Building on this systems focus the book first establishes the basics of interdisciplinarity Then by drawing on the author s experience of doing interdisciplinary research and working from his

personal toolkit it offers general principles and a framework from which researchers can build their own interdisciplinary toolkit with elements ranging from explorations of game changers in research to superconcepts In the last section the book tackles questions of managing and organising research from individual to institutional scales Alan Wilson deploys his wide experience researcher in urban science university professor and vice chancellor civil servant and institute director to build the narrative While his experience in urban science provides the illustrations the principles apply across many research fields
