Hydrothermal Processes and Mineral Systems Franco Pirajno, 2008-10-14 Hydrothermal processes on Earth have played an important role in the evolution of our planet These processes link the lithosphere hydrosphere and biosphere in continuously evolving dynamic systems Terrestrial hydrothermal processes have been active since water condensed to form the hydrosphere most probably from about 4.4 Ga The circulation of hot aqueous solution hydrothermal systems at and below the Earth's surface is ultimately driven by magmatic heat This book presents an in depth review of hydrothermal processes and systems that form beneath the oceans and in intracontinental rifts continental margins and magmatic arcs The interaction of hydrothermal fluids with rockwalls the hydrosphere and the biosphere together with changes in their composition through time and space contribute to the formation of a wide range of mineral deposit types and associated wallrock alteration On Earth sites of hydrothermal activity support varied ecosystems based on a range of chemotrophic microorganisms both at surface and in the subsurface This book also provides an overview of hydrothermal systems associated with meteorite impacts and explores the possibility that hydrothermal processes operate on other terrestrial planets such as Mars or satellites of the outer planets such as Titan and Europa Possible analogues of extraterrestrial putative hydrothermal processes pose the intriguing question of whether primitive life as we know it may exist or existed in these planetary bodies Audience This volume will be of interest to scientists and researchers in geosciences and life sciences

departments as well as to professionals and scientists involved in mining and mineral exploration

Arid Zone Geomorphology David S. G. Thomas, 2011-02-08 The new edition of Arid Zone Geomorphology aims to encapsulate the advances that have been made in recent years in the investigation and explanation of landforms and geomorphological processes in drylands Building on the success of the previous two editions the Third Edition has been completely revised and updated to reflect the latest developments in the field Whilst this latest edition will remain a comprehensive reference to the subject the book has been restructured to include regional case studies throughout to enhance student understanding and is clearly defined into five distinct sections Firstly the book introduces the reader to Large Scale Controls and Variability in Drylands and then moves on to consider Surface Processes and Characteristics The Work of Water The Work of the Wind The book concludes with a section on Living with Dryland Geomorphology that includes a chapter on geomorphological hazards and the human impact on these environments Once again recognised world experts in the field have been invited to contribute chapters in order to present a comprehensive and up to date overview of current knowledge about the processes shaping the landscape of deserts and arid regions In order to broaden the appeal of the Third Edition the book has been reduced in extent by 100 pages and the Regional chapters have been omitted in favour of the inclusion of key regional case studies throughout the book The Editor is also considering the inclusion of a supplementary website that could include further images problems and case studies

Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth s land surface experiences a desert climate and this area supports approximately 15% of the planet s population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an

understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology **Books In Print 2004-2005**
