Regulation Entry Energy Communications Banking:

Regulation and Entry Michael W. Klass, William G. Shepherd, 1976 Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1978 **Regulated Enterprise** Christopher James Castaneda, 1993 Christopher Castaneda's study of the construction of the pipelines that transported southwestern gas to the Northeast traces the ways in which the federal regulatory process fostered competitive growth in the natural gas industry In 1938 the Natural Gas Act granted the Federal Power Commission jurisdiction over the interstate transmission and sale of natural gas The FPC used its new powers to guide shape and manage an intensely competitive period in the industry As Castaneda shows aggressive and politically astute entrepreneurs based in the Southwest took advantage of economic opportunity and a regulatory environment conducive to industry growth They financed and built the nation's longest gas pipelines to connect the massive southwestern reserves with the major northern energy markets The coal industry which supplied the raw product for manufactured gas and the railroad industry which transported the coal adamantly but unsuccessfully opposed the action and attempted to halt the introduction of natural gas into their northeastern markets First during the war years emergency regulatory agencies directed the expansion of the industry into Appalachia Then in the ensuing peacetime market forces prompted entrepreneurs to compete vigorously for regulatory approval to build pipelines to sell natural gas in the Northeast While previous studies have examined the development of the natural gas industry after 1954 when the Supreme Court's Phillips decision established the FPC as a regulator of price control rather than as a manager of industrial growth Castaneda's is the first to examine this earlier entrepreneurial era Based on exhaustive research in corporate records and government documents *Regulated Enterprise* offers a case study of government business relations during a period of rapid industrial expansion and suggests a new way of looking at federal regulation and competitive growth BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved *Spatial Price Equilibrium: Advances in Theory, Computation and Application* Patrick T. Harker, 2012-12-06 The problem of predicting interregional commodity movements and the regional prices of these commodities has intrigued economists geographers and operations researchers for years In 1838 A. Cournot 1838 discussed the equilibrium of trade between New York and Paris and noted how the equilibrium prices depended upon the transport costs Enke 1951 recognized that this problem of predicting interregional flows and regional prices could be formulated as a network problem and in 1952 Paul Samuelson 1952 used the then recent advances in mathematical programming to formalize the spatial price equilibrium problem as a nonlinear optimization problem From this formulation Takayama and Judge 1964 derived their quadratic programming representation of the spatial price equilibrium problem which they and other scholars then applied to a wide variety of problem contexts Since these early beginnings the spatial price equilibrium problem has been widely studied extended and applied the paper by Harker 1985 reviews many of these results In recent years there has been a growing interest in this problem as evidenced by the numerous publications

listed in Harker 1985 The reasons for this renewed interest are many First new applications of this concept have arisen which challenge the theoretical underpinnings of this model The spatial price equilibrium concept is founded on the assumption of perfect or pure competition The applications to energy markets steel markets etc have led scholars to rethink the basic structure of this model The Development of a First Amendment Model for Telephonic Mass Communication, 1980-1989 Patrick O'Neill (Writer on telecommunication),1990 Applied Informatics and Communication, Part I Dehuai Zheng,2011-08-02 The five volume set CCIS 224 228 constitutes the refereed proceedings of the International conference on Applied Informatics and Communication ICAIC 2011 held in Xi an China in August 2011 The 446 revised papers presented were carefully reviewed and selected from numerous submissions The papers cover a broad range of topics in computer science and interdisciplinary applications including control hardware and software systems neural computing wireless networks information systems and image processing Public Utility Regulation in an Environment of Change Michigan State University. Institute of Public Utilities. Conference,1987 *The ... Joint Economic Report* United States. Congress. Joint Economic Committee,1977 Some years include additional minority supplemental and dissenting views *Views and Estimates of Committees of the House (together with Supplemental and Minority Views) on the Congressional Budget for Fiscal Year ...* United States. Congress. House. Committee on the Budget,1982 *Competition Law in Slovenia* Andrej Fatur,Klemen Podobnik,Ana Vlahek,2020-09-22 Derived from the renowned multi volume International Encyclopaedia of Laws this practical analysis of competition law and its interpretation in Slovenia covers every aspect of the subject the various forms of restrictive agreements and abuse of dominance prohibited by law and the rules on merger control tests of illegality filing obligations administrative investigation and enforcement procedures civil remedies and criminal penalties and raising challenges to administrative decisions Lawyers who handle transnational commercial transactions will appreciate the explanation of fundamental differences in procedure from one legal system to another as well as the international aspects of competition law Throughout the book the treatment emphasizes enforcement with relevant cases analysed where appropriate An informative introductory chapter provides detailed information on the economic legal and historical background including national and international sources scope of application an overview of substantive provisions and main notions and a comprehensive description of the enforcement system including private enforcement The book proceeds to a detailed analysis of substantive prohibitions including cartels and other horizontal agreements vertical restraints the various types of abusive conduct by the dominant firms and the appraisal of concentrations and then goes on to the administrative enforcement of competition law with a focus on the antitrust authorities powers of investigation and the right of defence of suspected companies This part also covers voluntary merger notifications and clearance decisions as well as a description of the judicial review of administrative decisions Its succinct yet scholarly nature as well as the practical quality of the information it provides make this book a valuable time saving tool for business and legal professionals alike Lawyers

representing parties with interests in Slovenia will welcome this very useful guide and academics and researchers will appreciate its value in the study of international and comparative competition law
