Regulatory Reform European Gas:

Regulatory Reform Jochen Hierl, International Energy Agency, Organisation for Economic Co-operation and Development, 2000 The countries of Continental Europe have started the process of reforming their natural gas markets This book sets the context for and considers the issues raised by these reforms It also analyses the key elements of effective reform such as third party access to the gas infrastructure Unlike earlier reformers Europe faces important challenges of growing import dependency and reliance on a few large producer countries against a background of strong demand growth It is vital that both short and long term security of supply are sustained in the new market conditions At the same time a key objective of reform is to improve economic efficiency through competition and short term trade in order to reduce prices for natural gas consumers The book argues that security and competition are not incompatible and that security can be enhanced by competition provided that reform is handled with care As Europe implements the EU Gas Directive this book is a timely review for energy policy makers and others involved in the reform process It is the latest in a series of IEA publications on energy market reforms Energy Market Reform Regulatory Reform , Structural and Regulatory Reform of the European Gas Market - Does the Current Approach Secure the Public Service Obligations Aldo Spanjer, 2009 The European natural gas market is in a state of flux In order to better secure the public service obligations supply security competitiveness and sustainability this market is currently being liberalized This requires significant structural and regulatory reform This reform process is not yet finished the European gas market finds itself in a transition phase from the traditional managed market structure towards an internal European gas market which is governed by competitive forces In such a transition phase problems and tensions are inevitable This study assesses the adequacy of the current approach towards structural and regulatory reform of the European gas market in light of the changes that are taking place on this market These changes create a new context for gas regulation Given the vital role of investments in securing any of the public service obligations the analysis is conducted from the perspective of ensuring sufficient investments The theoretical part criticizes the current neoclassical approach towards reform and argues that the transaction cost perspective will result in better outcomes in terms of market behavior in the new regulatory context The empirical part undertakes case studies on two recent amendments to gas regulation the possibility for certain investments to be exempted from the provisions to provide third party access and the enlarged scope for concluding downstream long term gas supply contracts in order to assess whether the theoretical critique is also valid in practice Both case studies confirm the theoretical critique The current regulatory approach appears to be stuck between the neoclassical and the transaction cost perspective Recommendations are provided in order to better align current regulation with the insights provided by Transaction Cost Economics

Industry Juan Rosellón,Jonathan Halpern,2001 Liberalization of the natural gas industry is complex because the sector combines activities with natural monopoly characteristics with activities that are potentially competitive The challenges are compounded when the state opts to retain vertically integrated monopolies in otherwise contestable segments of the industry Regulatory issues associated with partial liberalization of natural gas markets are analyzed through a case study of Mexico

Republic The Economics of the Gas Supply Industry Malcolm Abbott, 2016-05-12 In recent years natural gas has become a major source of energy with trade across borders increasing through both pipelines and as Liquefied Natural Gas LNG. Owing to this global development this book traces the development of the gas supply industry from localised to national industries and national industries to a major global industry. It looks at the basic economics and origins of the industry as well as the role of the government in its development and relation to international markets. The book highlights certain economic characteristics such as the industry's vertical and horizontal structure, the composition of consumer demand and the role of government in safety planning and investment. With the understanding of the industry's long term development, the book helps to illustrate the relationship between natural gas producers and importers of LNG. This book would be of interest to scholars majoring in resource economics and energy economics as well as to international practitioners in the natural gas market.

Energy Economics Subhes C. Bhattacharyya, 2011-02-28 Since its modest beginning in the 1970s, the academic and research focus on energy has grown substantially and energy has established itself as an independent interdisciplinary subject area. It attracts attention from people in a range of different fields including engineers, scientists, geologists, environmentalists, bankers, investors, policy makers and politicians. *Energy Economics* introduces the basic concepts of energy economics and explains how simple economic tools can be used to analyse contemporary energy issues. *Energy Economics* is organised into six parts that give the reader a thorough grounding in various key aspects of the subject: basic demand related concepts and ideas used in energy economics; supply side economics; energy markets with specific emphasis on oil, gas and coal; the application of simple economic principles in analysing contemporary energy issues; environmental aspects of energy use and regulatory and governance issues. *Energy Economics* is an easily accessible reference book for students of energy economics at the postgraduate level as well as for a wider interdisciplinary audience. It provides readers with the skills required to understand and analyse complex energy issues from an economic perspective.

Financial Aspects in Energy André Dorsman, Wim Westerman, Mehmet Baha Karan, Özgür Arslan, 2011-06-24 Energy production and supply as well as sourcing and consumption are becoming evermore important in a volatile world. In this book, attention is paid to prevalent energy issues from a finance perspective. The topics discussed cover markets, prices, regulations and firms. An international group of authors from both academia and energy practice provides in twelve chapters a state of the art of the energy markets in a finance environment. They do so by discussing the current knowledge and presenting empirical research in this quickly changing and developing field. This book is the first in a planned series on energy at a high scientific level organized by the Centre for Energy and Value Issues CEVI.

Natural Gas Services: Recent Reforms in Selected Markets, Inv. 332-426

, *Beyond the EU Regulatory State* Andrea Prontera, 2019-08-16 The EU's growing dependence on natural gas and Russian resources, energy security has become a hot discussion topic in academia and in policy circles in Brussels, Washington and many European capitals. However, most of the books on the subject use a very descriptive and/or normative approach and

very few attempt to theorise EU energy security outside of mainstream conceptualisations of the EU as an international actor This book closes an important gap in the literature and offers a fresh perspective on EU energy studies and it will be an important contribution to the debate on the development of European integration and the EU's role in international relations in the wake of the crisis in EU politics and in light of the EU's increasingly complex external environment Due to its interdisciplinary features the book combines EU studies international affairs political economy and energy studies and the topics covered this book will be of special interest to scholars of the international political economy of energy and to those interested in European politics and EU international relations
