Evolution in Investment Treaty Law and Arbitration Chester Brown,Kate Miles,2011-11-17

International investment law is in a state of evolution. With the advent of investor State arbitration in the latter part of the twentieth century and its exponential growth over the last decade, new levels of complexity, uncertainty, and substantive expansion are emerging. States continue to enter into investment treaties, and the number of investor State arbitration claims continues to rise. At the same time, the various participants in investment treaty arbitration are faced with increasingly difficult issues concerning the fundamental character of the investment treaty regime, the role of the actors in international investment law, the new significance of procedure in the settlement of disputes, and the emergence of cross-cutting issues. Bringing together established scholars and practitioners as well as members of a new generation of international investment lawyers, this volume examines these developments and provides a balanced assessment of the challenges being faced in the field.

The Grasping Hand Ilya Somin, 2015-05-28. In 2005, the Supreme Court ruled that the city of New London, Connecticut, could condemn fifteen residential properties in order to transfer them to a new private owner. Although the Fifth Amendment only permits the taking of private property for public use, the Court ruled that the transfer of condemned land to private parties for economic development is permitted by the Constitution, even if the government cannot prove that the expected development will ever actually happen. The Court's decision in *Kelo v. City of New London* empowered the grasping hand of the state at the expense of the invisible hand of the market. In this detailed study of one of the most controversial Supreme Court cases in modern times, Ilya Somin argues that *Kelo* was a grave error. Economic development and blight condemnations are unconstitutional under both originalist and most living constitution theories of legal interpretation. They also victimize the poor and the politically weak for the benefit of powerful interest groups and often destroy more economic value than they create. *Kelo* itself exemplifies these patterns. The residents targeted for condemnation lacked the influence needed to combat the formidable government and corporate interests arrayed against them. Moreover, the city's poorly conceived development plan ultimately failed; the condemned land lies empty to this day, occupied only by feral cats. The Supreme Court's unpopular ruling triggered an unprecedented political reaction, with forty-five states passing new laws intended to limit the use of eminent domain. But many of the new laws impose few or no genuine constraints on takings. The *Kelo* backlash led to significant progress, but not nearly as much as it may have seemed. Despite its outcome, the closely divided 5-4 ruling shattered what many believed to be a consensus that virtually any condemnation qualifies as a public use under the Fifth Amendment. It also showed that there is widespread public opposition to eminent domain abuse. With controversy over takings sure to continue, *The Grasping Hand* offers the first book-length analysis of *Kelo* by a legal scholar, alongside a broader history of the dispute over public use and eminent domain and an evaluation of options for reform.

Thinking Ecologically Marian Chertow, 1997-01-01 Twenty five years ago the Cuyahoga River in Ohio was so contaminated that it caught fire air pollution in some cities was thick enough to taste and environmental laws focused on the obvious enemy large American factories with belching smokestacks and pipes gushing wastes Federal legislation has succeeded in providing cleaner air and water but we now confront a different set of environmental problems less visible and more subtle This important book offers thought provoking ideas on how America can respond to changing public health and ecological risks and create sound environmental policy for the future The innovative thinkers of the Next Generation Project of the Yale Center for Environmental Law and Policy experts from business government nongovernmental organizations and academia propose reforms that balance environmental efforts with other public needs and issues They call for new foundations for environmental law and policy adoption of a more diverse set of policy tools and strategies economic incentives ecolabels and new connections between critical sectors agriculture energy transportation service providers and environmental policy Future progress must involve not only officials from the U S Environmental Protection Agency and state environmental protection departments say the authors but also decision makers as diverse as mayors farmers energy company executives and delivery route planners To be effective next generation policy making will view environmental challenges comprehensively connect academic theory with practical policy and bridge the gaps that have caused recent policy debates to break down in rancor This book begins the process of accomplishing these challenging goals

The Soul's Economy Jeffrey Sklansky, 2003-10-16 Tracing a seismic shift in American social thought Jeffrey Sklansky offers a new synthesis of the intellectual transformation entailed in the rise of industrial capitalism For a century after Independence the dominant American understanding of selfhood and society came from the tradition of political economy which defined freedom and equality in terms of ownership of the means of self employment However the gradual demise of the household economy rendered proprietary independence an increasingly embattled ideal Large landowners and industrialists claimed the right to rule as a privilege of their growing monopoly over productive resources while dispossessed farmers and workers charged that a propertyless populace was incompatible with true liberty and democracy Amid the widening class divide nineteenth century social theorists devised a new science of American society that came to be called social psychology The change Sklansky charts begins among Romantic writers such as Ralph Waldo Emerson and Margaret Fuller continues through the polemics of political economists such as Henry George and William Graham Sumner and culminates with the pioneers of modern American psychology and sociology such as William James and Charles Horton Cooley Together these writers reconceived freedom in terms of psychic self expression instead of economic self interest and they redefined democracy in terms of cultural kinship rather than social compact
