Stream Hydrology Nancy D. Gordon, Thomas A. McMahon, Brian L. Finlayson, Christopher J. Gippel, Rory J. Nathan, 2013-05-03 Since the publication of the first edition 1994 there have been rapid developments in the application of hydrology geomorphology and ecology to stream management In particular growth has occurred in the areas of stream rehabilitation and the evaluation of environmental flow needs The concept of stream health has been adopted as a way of assessing stream resources and setting management goals Stream Hydrology An Introduction for Ecologists Second Edition documents recent research and practice in these areas Chapters provide information on sampling field techniques stream analysis the hydrodynamics of moving water channel form sediment transport and commonly used statistical methods such as flow duration and flood frequency analysis Methods are presented from engineering hydrology fluvial geomorphology and hydraulics with examples of their biological implications This book demonstrates how these fields are linked and utilised in modern scientific river management Emphasis on applications from collecting and analysing field measurements to using data and tools in stream management Updated to include new sections on environmental flows rehabilitation measuring stream health and stream classification Critical reviews of the successes and failures of implementation Revised and updated windows based AQUAPAK software This book is essential reading for 2nd 3rd year undergraduates and postgraduates of hydrology stream ecology and fisheries science in Departments of Physical Geography Biology Environmental Science Landscape Ecology Environmental Engineering and Limnology It would be valuable reading for professionals working in stream ecology fisheries science and habitat management environmental consultants and engineers

Restoration of Puget Sound Rivers David R. Montgomery, Susan Bolton, Derek B. Booth, Leslie Wall, 2015-12-31 The recent listing of Pacific salmon under the Endangered Species Act has led to substantial interest in the scientific basis for river restoration in the Pacific Northwest Millions of dollars in state and federal funding have been programmed for habitat restoration efforts to stem the decline of salmon populations in the region This volume addresses the need for a solid understanding of fluvial processes and aquatic ecology in order to predict both river and salmonid response to restoration projects In the Pacific Northwest as in most regions of the United States we are still learning about the processes that create habitat and river structure how those processes influence aquatic ecosystems and how to gauge the response of river systems to both land use changes and restoration efforts River systems are still responding to historic changes and degraded habitat may not be restored successfully if natural conditions are not well understood particularly if massive changes in watershed hydrology or other processes are the root cause These issues faced in the development of regional river restoration programs are by no means unique to the Northwest and so the initiation of a regional program of river restoration provides an opportunity to evaluate the state of river restoration in general The eighteen chapters of Restoration of Puget Sound Rivers presented by

the region's experts at a symposium of the Society for Ecological Restoration examine geological and geomorphological controls on river and stream characteristics and dynamics biological aspects of river systems in the region and the application of fluvial geomorphology civil engineering riparian ecology and aquatic ecology in efforts to restore Puget Sound Rivers This volume will be of interest to geomorphologists aquatic biologists civil engineers planners and all those interested in the interface of science and policy in addressing one of the fundamental environmental challenges of the twenty first century

Contaminated Rivers Jerry R. Miller, Suzanne M. Orbock Miller, 2007-05-06 This book provides an introductory understanding of fluvial geomorphic principles and how these principles can be integrated with geochemical data to cost effectively characterize assess and remediate contaminated rivers The book stresses the importance of needing to understand both geomorphic and geochemical processes Thus the overall presentation is first an analysis of physical and chemical processes and second a discussion of how an understanding of these processes can be applied to specific aspects of site assessment and remediation Such analyses provide the basis for a realistic prediction of the kinds of environmental responses that might be expected for example during future changes in climate or land use

River Restoration Stephen Darby, David Sear, 2008-02-28 River restoration projects are designed to recreate functional characteristics within a context of physical stability They tend to focus on the development and application of geomorphic principles for river restoration design Due to different models obtaining different results on the same problem incomplete or absent data and climatic social cultural changes the designers and managers of such projects frequently face high levels of uncertainty This book will provide a systematic overview of the issues involved in minimizing and coping with uncertainty in river restoration projects A series of thematic sections will be used to define the various sources of uncertainty in restoration projects and how these show at different points in the life cycle design construction and post construction phases of restoration projects The structure of the book will offer a rational theoretical analysis of the problem while providing practical guidance in managing the different sources of uncertainty A wide range of case studies will be included from Europe North America and Australasia
