Reinventing the Retirement Paradigm Robert Louis Clark, Olivia S. Bartik, 2008 In this book which was the outgrowth of a conference sponsored by the Upjohn Institute in Washington D C in June 2007 leading policy analysts frame the major challenges facing U S labor policy Improving the skills of American workers so that they can better compete in a global economy Addressing the crisis in our system of employer sponsored health insurance Minimizing the effects of dislocation due to immigration and trade Removing barriers to employment for older workers Improving the quality of jobs for low wage workers without harming the competitiveness of American companies Addressing the serious employment barriers of the

disadvantaged Each chapter in this volume tackles one of these policy challenges identifying the key problems evaluating the effectiveness of current policy approaches and offering innovative forward thinking but pragmatic alternative policies Collectively the chapters in this volume offer a clear road map for future labor market policy Managing the Older Worker Peter Cappelli,Bill Novelli,2010-08-17 Your organization needs older workers more than ever They transfer knowledge between generations transmit your company s values to new hires make excellent mentors for younger employees and provide a just in time workforce for special projects Yet more of these workers are reporting to people younger than they are This presents unfamiliar challenges that if ignored can prevent you from attracting retaining and engaging older employees In Managing the Older Worker Peter Cappelli and William Novelli explain how companies and younger managers can maximize the value provided by older workers The key Recognize that boomers needs differ from younger generations and adapt your management practices accordingly For instance Lead with mission As employees age they become more altruistic Emphasize the positive impact of older workers efforts on the world around them Forge social connections Many older employees keep working to maintain social relationships Offer tasks that require interaction with others Provide different benefits Tailor benefits such as elder care insurance programs or discount medication to older workers interests Drawing on research in management psychology and other disciplines Managing the Older Worker reveals who your older workers are what they want and how to manage them for maximum value **Gerontology** Madonna Harrington Meyer,Elizabeth A. women are increasingly remaining in the labor force Most often the reason for this is that they need to work additional years in order to be able to support an increasing number of years in retirement This leaves employers scrambling for ways to adapt to a growing number of retirement aged workers Clark and Morrill provide a thorough assessment of the costs and benefits of accommodating later retirement ages and they describe options employers may use to create some new form of employment contract with aging workers The most prominent issues employers with aging workers face are declining productivity rising labor and benefits costs and a suboptimal age distribution of their workforces According to the authors employers could respond to these issues by finding new ways to accommodate older workers with for instance phased retirement and return to work policies But the success of such policies also depends on tax policies and whether government provided retirement benefits could be redesigned to play a role in a newly defined employment relationship

Generational Interdependencies: The Social Implications for Welfare Beverley A. Searle, 2018-01-15 The issue of generational transfers is growing in importance Populations are ageing placing an increasing burden on provision of pensions health care and other welfare services In many nations the imbalance between a growing older generation supported by a shrinking younger generation has fuelled debates about intergenerational justice The key argument being that political and institutional developments over the last century have been to the advantage of older generations at the expense of current younger and future generations But this only addresses half of the story neglecting the flows of resources through private family channels One key response to the growing fiscal problem of ageing societies has been to focus responsibility on self funding and familial support The growth of asset values particularly housing which are concentrated among the elderly underpin such strategies But this exposes new risks as potentially extractable resources are determined by wider fluctuations in the economy and housing markets in particular Clearly these cohort effects and responses to them play out differently in different national developmental settings depending on long run patterns of economic social and demographic change This collection address these issues and provides original insights across different international contexts The collection focusses on financial and non financial transfers generational interdependencies and the role of labour and housing markets in welfare support set against the changing economic landscape following the Great Financial Crisis of 2007 Although institutional and national differences exist the key emerging issues are the same the financial and welfare challenges of supporting aging in societies inequalities in the availability of assets across individuals families and nations and the extent to which private asset accumulation can support families over the life course Drawing from examples across European countries this collection will nonetheless be relevant to researchers and policy makers in other nations addressing the complexities of providing welfare across the life course in the face of restricted financial resources

Retirement System Risk Management Olivia S. Mitchell, Raimond Maurer, J. Michael Orszag, 2016-11-10 In the wake of the worst financial crisis since the Great Depression lawmakers and regulators around the world have changed the playbook for how banks and other financial institutions must manage their risks and report their activities The US Congress passed the Dodd Frank Wall Street Reform and Consumer Protection Act and the European System of Financial Supervision ESFS is also crafting a framework to supervise regulated financial sector institutions including banks insurers pension funds and asset managers The implosion of the financial sector has also prompted calls for accounting changes from those seeking to better understand how assets and liabilities are reported Initially banks were seen by many as the most important focus for regulatory reform but other institutions are now attracting policymaker attention There is logic to this in terms of managing systemic risk and ensuring a level playing field that avoids arbitrage between institutional structures Yet the nature of pension and insurer liabilities is so different from that of bank

liabilities that careful attention is needed in drafting appropriate rules The new rules are having both direct and spill over effects on retirement systems around the world The first half of this volume undertakes an assessment of how global responses to the financial crisis are potentially altering how insurers pension plan sponsors and policymakers will manage risk in the decades to come The second half evaluates developments in retirement saving and retirement products to determine which and how these might help meet shortfalls in retirement provision *Aging and the Macroeconomy* National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on the Long-Run Macroeconomic Effects of the Aging U.S. Population, 2013-01-10 The United States is in the midst of a major demographic shift In the coming decades people aged 65 and over will make up an increasingly large percentage of the population The ratio of people aged 65 to people aged 20 64 will rise by 80% This shift is happening for two reasons people are living longer and many couples are choosing to have fewer children and to have those children somewhat later in life The resulting demographic shift will present the nation with economic challenges both to absorb the costs and to leverage the benefits of an aging population *Aging and the Macroeconomy Long Term Implications of an Older Population* presents the fundamental factors driving the aging of the U S population as well as its societal implications and likely long term macroeconomic effects in a global context The report finds that while population aging does not pose an insurmountable challenge to the nation it is imperative that sensible policies are implemented soon to allow companies and households to respond It offers four practical approaches for preparing resources to support the future consumption of households and for adapting to the new economic landscape **Real-World Shocks and Retirement System Resiliency** Olivia S. Mitchell, John Sabelhaus, Stephen

Utkus, 2024-01-07 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations Growing awareness of real world shocks including market downturns health surprises and labor market readjustment is calling into question the ability of global retirement systems to remain healthy and sustain future retirees Financial and labor market stresses are shaping how older workers fare as they head into retirement and how younger workers must prepare financially for their futures These shocks come on top of long standing concerns surrounding rising longevity along with the adequacy and sustainability of public and private benefit systems This volume explores how these challenges will drive the need for new policy drawing on perspectives of senior and new researchers to the field as well as exciting new datasets
