Relativistic Heavy Ion Collisions:

Relativistic Heavy Ion Physics Reinhard Stock, 2010-04-01 This new volume I 23 of the Landolt B rnstein Data Collection series continues a tradition inaugurated by the late Editor in Chief Professor Werner Martienssen to provide in the style of an encyclopedia a summary of the results and ideas of Relativistic Heavy Ion Physics Formerly the Landolt B rnstein series was mostly known as a compilation of numerical data and functional relations but it was felt that the more comprehensive summary undertaken here should meet an urgent purpose Volume I 23 reports on the present state of theoretical and experimental knowledge in the field of Relativistic Heavy Ion Physics What is meant by this rather technical terminology is the study of strongly interacting matter and its phases in short QCD matter by means of nucleus nucleus collisions at relativistic energy The past decade has seen a dramatic progress and widening of scope in this field which addresses one of the chief remaining open frontiers of Quantum Chromodynamics QCD and in a wider sense the Standard Model of Elementary Interactions The data resulting from the CERN SPS BNL AGS and GSI SIS experiments and in particular also from almost a decade of experiments carried out at the Relativistic Heavy Ion Collider RHIC at Brookhaven have been fully analyzed uncovering a wealth of information about both the confined and deconfined phases of QCD at high energy density

Phenomenology Of Ultra-relativistic Heavy-ion Collisions Wojciech Florkowski, 2010-03-24 This book gives an introduction to main ideas used in the physics of ultra relativistic heavy ion collisions The links between basic theoretical concepts discussed gradually from the elementary to more advanced level and the results of experiments are outlined so that experimentalists may learn more about the foundations of the models used by them to fit and interpret the data while theoreticians may learn more about how different theoretical ideas are used in practical applications The main task of the book is to collect the available information and establish a uniform picture of ultra relativistic heavy ion collisions The properties of hot and dense matter implied by this picture are discussed comprehensively In particular the issues concerning the formation of the quark gluon plasma in present and future heavy ion experiments are addressed

Introduction to Relativistic Heavy Ion Collisions L. P. Csernai, 1994-05-10 Introduction to Relativistic Heavy Ion Collisions L szl P Csernai University of Bergen Norway Written for postgraduates and advanced undergraduates in physics this clear and concise work covers a wide range of subjects from intermediate to ultra relativistic energies thus providing an introductory overview of heavy ion physics The reader is introduced to essential principles in heavy ion physics through a variety of questions with answers of varying difficulty This timely text is based on a series of well received lectures given by Professor L Csernai at the University of Minnesota and the University of Bergen where the author is based

Introduction to Relativistic Heavy Ion Physics Jerzy Bartke, 2009 This book attempts to cover the fascinating field of physics of relativistic heavy ions mainly from the experimentalist s point of view After the introductory chapter on quantum chromodynamics basic properties of atomic nuclei sources of relativistic nuclei and typical detector set ups are described in three subsequent chapters

Experimental facts on collisions of relativistic heavy ions are systematically presented in 15 consecutive chapters starting from the simplest features like cross sections multiplicities and spectra of secondary particles and going to more involved characteristics like correlations various relatively rare processes and newly discovered features collective flow high p_T suppression and jet quenching Some entirely new topics are included such as the difference between neutron and proton radii in nuclei heavy hypernuclei and electromagnetic effects on secondary particle spectra Phenomenological approaches and related simple models are discussed in parallel with the presentation of experimental data Near the end of the book recent ideas about the new state of matter created in collisions of ultrarelativistic nuclei are discussed In the final chapter some predictions are given for nuclear collisions in the Large Hadron Collider LHC now in construction at the site of the European Organization for Nuclear Research CERN Geneva Finally the appendix gives us basic notions of relativistic kinematics and lists the main international conferences related to this field

Relativistic Heavy-ion Collisions Rudolph C. Hwa, Chong-shou Gao, Minghan Ye, 1990 Papers of the June 1989 meeting in Beijing by the China Center of Advanced Science and Technology This small book covers nucleus nucleus collisions states of the vacuum and highly relativistic heavy ions in the experimental realm Theoretical papers deal with quark gluon plasma and relativistic heavy ion collisions Annotation copyrighted by Book News Inc Portland OR

High Energy Heavy Ion Collisions and the RHIC [Relativistic Heavy Ion Collider] Project at Brookhaven T.W. Ludlam,

Topics in Relativistic Heavy-ion Collisions. [Mechanism], 1979 The activities of the last few years in the field of relativistic heavy ion collisions are reviewed The current understanding of the reaction mechanism is described Several recent topics are reported 48 references

Practice of Color in Relativistic Heavy Ion Collisions (421st Brookhaven Lecture), 2007 As the world's newest and largest operating accelerator for nuclear physics research the Relativistic Heavy Ion Collider at Brookhaven Lab has been smashing beams of gold ions together since 2000 to duplicate on the atomic level conditions that last existed after the Big Bang In 2005 RHIC's four teams of physicists announced that contrary to expectation what existed a few microseconds after the Big Bang is not a plasma of weakly interacting quarks and gluons it is a liquid of strongly interacting quarks and gluons This Brookhaven lecture will explore the properties of this matter in terms of measurements of particle abundance temperature flow flavor production and jet quenching and the relationship to the fundamental properties of Quantum Chromodynamics After reviewing ongoing measurements and results presented at Quark Matter 2006 in November the speaker will describe detector upgrades that will advance the understanding of the QCD matter created at RHIC

Quenching in Relativistic Heavy Ion Collisions at the LHC Aaron Angerami,2013-12-02 This thesis presents the first measurements of jets in relativistic heavy ion collisions as reported by the ATLAS Collaboration These include the first direct observation of jet quenching through the observation of a centrality dependent dijet asymmetry Also a series of jet suppression measurements are presented which provide quantitative constraints on theoretical models of jet quenching These results follow a detailed introduction to heavy ion physics with emphasis on the phenomenon of jet quenching and a comprehensive description of the ATLAS detector and its capabilities with regard to performing these measurements

Ultrarelativistic Heavy-Ion Collisions Ramona Vogt,2007-06-04 This book is designed for advanced undergraduate and graduate students in high energy heavy ion physics It is relevant for students who will work on topics being explored at RHIC and the LHC In the first part the basic principles of these studies are covered including kinematics cross sections including the quark model and parton distribution functions the geometry of nuclear collisions thermodynamics hydrodynamics and relevant aspects of lattice gauge theory at finite temperature The second part covers some more specific probes of heavy ion collisions at these energies high mass thermal dileptons quarkonium and hadronization The second part also serves as extended examples of concepts learned in the previous part Both parts contain examples in the text as well as exercises at the end of each chapter Designed for students and newcomers to the field Focuses on hard probes and QCD Covers all aspects of high energy heavy ion physics Includes worked example problems and exercises **On the**
