Reliable Plan Selection By Intelligent Machines:

Reliable Plan Selection By Intelligent Machines John E McInroy, Joseph C Musto, George N Saridis, 1996-02-29 This book derives techniques which allow reliable plans to be automatically selected by Intelligent Machines It concentrates on the uncertainty analysis of candidate plans so that a highly reliable candidate may be identified and used For robotic components such as a particular vision algorithm for pose estimation or a joint controller methods are explained for directly calculating the reliability However these methods become excessively complex when several components are used together to complete a plan Consequently entropy minimization techniques are used to estimate which complex tasks will perform reliably The book first develops tools for directly calculating the reliability of sub systems and methods of using entropy minimization to greatly facilitate the analysis are explained Since these sub systems are used together to accomplish complex tasks the book then explains how complex tasks can be efficiently evaluated

Design Of Intelligent Control Systems Based On Hierarchical Stochastic Automata Pedro Lima, George N Saridis, 1996-03-20 In recent years works done by most researchers towards building autonomous intelligent controllers frequently mention the need for a methodology of design and a measure of how successful the final result is This monograph introduces a design methodology for intelligent controllers based on the analytic theory of intelligent machines introduced by Saridis in the 1970s The methodology relies on the existing knowledge about designing the different sub systems composing an intelligent machine Its goal is to provide a performance measure applicable to any of the sub systems and use that measure to learn on line the best among the set of pre designed alternatives given the state of the environment where the machine operates Different designs can be compared using this novel approach

Advances in Computational Intelligence Fei-Yue Wang, Derong Liu, 2006 Computational Intelligence CI is a recently emerging area in fundamental and applied research exploiting a number of advanced information processing technologies that mainly embody neural networks fuzzy logic and evolutionary computation With a major concern to exploiting the tolerance for imperfection uncertainty and partial truth to achieve tractability robustness and low solution cost it becomes evident that composing methods of CI should be working concurrently rather than separately It is this conviction that research on the synergism of CI paradigms has experienced significant growth in the last decade with some areas nearing maturity while many others remaining unresolved This book systematically summarizes the latest findings and sheds light on the respective fields that might lead to future breakthroughs

Network-based Distributed Planning Using Coevolutionary Algorithms

Arthur C Sanderson, Raj Subbu, 2004-02-26 In this book efficient and scalable coevolutionary algorithms for distributed network based decision making which utilize objective functions are developed in a networked environment where internode communications are a primary factor in system performance A theoretical foundation for this class of coevolutionary algorithms is introduced using techniques from stochastic process theory and mathematical analysis A case study in distributed network based decision making presents an implementation and detailed evaluation of the coevolutionary decision making framework that incorporates distributed evolutionary agents and mobile agents The methodology discussed in this book can have a fundamental impact on the principles and practice of engineering in the distributed network based environment that is emerging within and among corporate enterprise systems In addition the conceptual framework of the approach to distributed decision systems described may have much wider implications for network based systems and applications

Intelligent Task Planning Using Fuzzy Petri Nets Tiehua Cao, Arthur C. Sanderson, 1996 This book describes an approach to intelligent task planning in a robotic system Petri net and fuzzy logic are integrated and used to represent task sequence planning and error recovery During the generation and execution of task plans different kinds of uncertainties need to be handled to ensure the efficiency and reliability of the system Following a systematic modeling procedure a fuzzy Petri net is constructed based on geometric relations fuzzy variables and reasoning structures The resulting net can be used to analyze and control the system Many examples are discussed to illustrate the theory and the applications of fuzzy Petri nets

Intelligent Systems: Safety, Reliability and Maintainability Issues Okay Kaynak, Ger Honderd, Edward Grant, 2012-12-06 This book is a collection of some of the papers that were presented during a NATO Advanced Research Workshop ARW on Intelligent Systems Safety Reliability and Maintainability Issues that was held in Kusadasi Turkey during August 24 28 1992 Attendance at this workshop was mainly by invitation only drawing people internationally representing industry government and the academic community Many of the participants were internationally recognized leaders in the topic of the workshop The purpose of the ARW was to bring together a highly distinguished group of people with the express purpose of debating where the issues of safety reliability and maintainability place direct and tangible constraints on the development of intelligent systems As a consequence one of the major debating points in the ARW was the definition of intelligence intelligent behaviour and their relation to complex dynamic systems Two major conclusions evolved from the ARW are 1 A continued need exists to develop formal theoretical frameworks for the architecture of such systems together with a reflection on the concept of intelligence 2 There is a need to focus greater attention to the role that the human play in controlling intelligent systems The workshop began by considering the typical features of an intelligent system The complexity associated with multi resolutional architectures was then discussed leading to the identification of a necessity for the use of a combinatorial synthesis approach This was followed by a session on human interface issues **Advanced**
