Long Range Ballistic Missiles:

Long-range Ballistic Missiles Eric Burgess, 1961 *Long-Range Ballistic Missile Defense in Europe* Steven A. Hildreth, 2007 Successive U S administrations have urged the creation of an anti missile system to protect against threats from rogue states The Bush Administration believes that North Korea and Iran are strategic threats and questions whether they can be deterred by conventional means The Administration has built long range missile defense bases in Alaska and California to protect against North Korean missiles The system has been tested with mixed results and questions have been raised about its effectiveness The Administration has proposed deploying a ground based mid course defense GMD element of the larger Ballistic Missile Defense System BMDS in Europe to defend against the threat of long range missiles from Iran The system would include 10 interceptors in Poland a fixed radar installation in the Czech Republic and another forward deployed radar elsewhere in the region but closer to Iran Deployment of the European GMD capability is scheduled to be completed by 2013 at a cost of 4 04 billion *The Development of Ballistic Missiles in the United States Air Force, 1945-1960* Jacob Neufeld, 1990 Following World War II the onset of nuclear weapons long range jet bombers and ballistic missiles radically changed American foreign policy and military strategy The United States Air Force led by men of far sighted vision and uncommon dedication accepted the challenge of organizing and leading a massive research and development effort to build ballistic missiles In the quarter of the century since these weapons have constituted one of the tree legs of the strategic triad the basis of America s strategy of deterring nuclear war yet they have received less attention from the public and within the Air Force than the more glamorous manned bombers of the Strategic Air Command or the missile launching submarines of the U S Navy This volume attempts to correct the imbalance by telling the story of development of Air Force ballistic Missiles It concentrates on the first generation of ballistic missiles the intercontinental Atlas and Titan and the intermediate range Thor Although the effort to develop rockets has a longer history than commonly assumed the modern history spans the relatively short era from 1945 to 1960 During this brief interval missiles advanced from drawing board to alert status where the next generation now remains poised to deter war **Conventional Prompt Global Strike (PGS) and Long-Range Ballistic Missiles (BM)** Amy F. from the possibility that nations detecting the launch of a U S PGS weapon would not be able to determine whether the weapon carried a nuclear or conventional warhead Congress has raised concerns about this possibility in the past While most analysts expected the Air Force to take the lead in deploying a hypersonic delivery system on a modified ballistic missile a concept known as the conventional strike missile CSM tests of the hypersonic vehicle known as the HTV 2 have not succeeded An alternative glider known as the AHW may be deployed on missiles based at sea Congress may review other weapons options for the CPGS mission including bombers cruise missiles and possibly scramjets or other advanced technologies Warheads deployed on boost glide systems would not be affected by the 2010 New START Treaty because these are new types of strategic offensive arms But those deployed in existing types of reentry vehicles on existing types of ballistic missiles would count against the treaty limits This report will be updated as needed *A Day in the Life of the BMDs* ,
