Intelligence - Volume II Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers

Neuroscience Carlos M. Contreras, 2012-03-16 The Neuronal Doctrine recently reached its 100th year and together with the development of psychopharmacology by the middle of 20th century promoted spectacular developments in the knowledge of the biological bases of behavior The overwhelming amount of data accumulated forced the division of neuroscience into several subdisciplines but this division needs to dissolve in the 21st century and focus on specific processes that involve diverse methodological and theoretical approaches The chapters contained in this book illustrate that neuroscience converges in the search for sound answers to several questions including the pathways followed by cells how individuals communicate with each other inflammation learning and memory the development of drug dependence and approaches to explaining the processes that underlie two highly incapacitating chronic degenerative illnesses **Neuromorphic Systems**

Leslie S. Smith, Alister Hamilton, 1998 Neuromorphic systems are implementations in silicon of sensory and neural systems whose architecture and design are based on neurobiology This growing area proffers exciting possibilities such as sensory systems that can compete with human senses and pattern recognition systems that can run in real time The area is at the intersection of neurophysiology computer science and electrical engineering This book brings together recent developments in Europe and the US so that researchers in both academia and industry can find out about the state of the art As well as elementary material on what neuromorphic systems are and why they are growing in importance the book contains details of current work There are articles on aspects of implementing sensory neuromorphic systems as well as articles on neuromorphic hardware Organisation and Regulation G. Emulation of Bursting Neurons in Neuromorphic Hardware based on Phase-Change Materials Richard Meyes, 2015-01-01 In the history of computing hardware Moore s law named after Intel co founder Gordon E Moore describes a long term trend

whereby the number of transistors that can be placed inexpensively on an integrated circuit doubles approximately every two years 1 Because the number of transistors is crucial for computing performance significant performance gains could be achieved simply through complementary metal oxide semiconductor CMOS transistor downscaling Although Moore's law which was mentioned for the first time in 1965 turned out to persist for almost five decades the nano era poses significant problems to the concept of downscaling 2 Upon approaching the size of atoms quantum effects such as quantum tunneling pose fundamental barriers to the trend Furthermore the conventional computing paradigm based on the Von Neumann architecture and binary logic becomes increasingly inefficient considering the growing complexity of today's computational tasks Hence new computational paradigms and alternative information processing architectures must be explored to extend the capabilities of future information technology beyond digital logic A fantastic example for such an alternative information processing architecture is the human brain The brain provides superior computational features such as ultrahigh density of processing units low energy consumption per computational event ultrahigh parallelism in computational execution extremely flexible plasticity of connections between processing units and fault tolerant computing provided by a huge number of computational entities Compared to today's programmable computers biological systems are six to nine orders of magnitude more efficient in complex environments 3 For instance simulating five seconds of brain activity takes IBM's state of the art supercomputer Blue Gene a hundred times as long i.e. 500 s during which it consumes 1.4 MW of power whereas the power dissipation in the human central nervous system is of the order of 10 W 4 5 Thus it is not only extremely interesting but in terms of computational progress also highly desirable to understand how information is processed in the human brain The conceptual idea developed within the framework of this thesis tries to contribute to this intention In contrast to most recent research dealing with the simulation and emulation of specific connections between nerve cells 5 12 the work of this thesis focuses on investigating on

Psychiatry and Neuroscience Update - Vol. V Pascual Ángel Gargiulo, Humberto Luis Mesones-Arroyo, 2024-12-28 This book offers a multidisciplinary approach to the phenomenon of addiction including a discussion of its anthropological neurological psychiatric and social aspects The editors have maintained this multidisciplinary criterion since the first volume of the Psychiatry and Neuroscience Update collection Approaching a topic from multiple points of view guides the mentality to open to biological and psychological relationships and facilitates translational extrapolations The ability to establish relationships closer or more distant but always binding is thus stimulated whether for study research or the interpretation of clinical reality As in previous volumes the book opens with a part dedicated to anthropological and philosophical aspects thus ensuring the validity of the humanistic aspect Intersubjectivity epistemological reflections the meaning of ecstasy and philosophical reflection leading to therapy are explored Part 2 From Basic Neurosciences to Human Brain presents a set of basic investigations with high translational content This corresponds with the editors intention to build bridges here between the basic and the clinical favoring the translational Chapters present

topics of interest to both fields such as the neurobiology of addictions cocaine and benzodiazepines Part 3 establishes links between neurosciences learning teaching and the social environment It begins with a chapter on executive functioning before discussing excessive use of computer technology and educational interventions for patients with alcohol addiction The fourth part of the book attempts to explain pathological human behavior It is about establishing links between brain disorders and diseases in the strict sense Among other topics chapters deal with cognitive dysfunction in addiction neuroimaging and stigma around substance use disorders Psychiatry and Neuroscience Update Addiction From Laboratory and Anthropology to Clinical Practice Vol V was edited and authored by a multidisciplinary group of authors and will be vital for an equally multidisciplinary group of readers psychiatrists psychologists neuroscientists and any other clinician or researcher that is interested in addictions Those in the humanities particularly anthropologists and philosophers will find the first part of great interest Computational Neuroscience J.M. Bower,1999-07-08 This volume includes papers originally presented at the 7th annual Computational Neuroscience Meeting CNS 98 held in July of 1998 at the Fess Parker Doubletree Inn in Santa Barbara California The CNS meetings bring together computational neuroscientists representing many different fields and backgrounds as well as many different experimental preparations and theoretical approaches The papers published here range from pure experimental neurobiology to neuro ethology mathematics physics and engineering In all cases the research described is focused on understanding how nervous systems compute The actual subjects of the research include a highly diverse number of preparations modeling approaches and analysis techniques Accordingly this volume reflects the breadth and depth of current research in computational neuroscience taking place throughout the world

Cognitive Neuroscience of Memory Scott D. Slotnick,2017-02-13 Within the last two decades the field of cognitive neuroscience has begun to thrive with technological advances that non invasively measure human brain activity This is the first book to provide a comprehensive and up to date treatment on the cognitive neuroscience of memory Topics include cognitive neuroscience techniques and human brain mechanisms underlying long term memory success long term memory failure working memory implicit memory and memory and disease Cognitive Neuroscience of Memory highlights both spatial and temporal aspects of the functioning human brain during memory Each chapter is written in an accessible style and includes background information and many figures In his analysis Scott D Slotnick questions popular views rather than simply assuming they are correct In this way science is depicted as open to question evolving and exciting **Cognitive**

looks at the interaction between chemicals and body systems pharmacology utilizes the basic disciplines of chemistry biochemistry physiology pathology and microbiology in its practice Pharmacology is a foundation science for pharmacy which is the rational prescribing of drugs to treat disease and the foundation science for toxicology which is the study of the toxic actions of chemicals on the body The two volumes are organized in groups of chapters as follows The first group of chapters discuss pharmacological principles and these include chapters on Pharmacodynamics Pharmacokinetics Neuropharmacology Autonomic Pharmacology and Clinical Pharmacology The second group of chapters discusses the processes of Drug discovery and the Safety requirements for drugs to be used therapeutically and include Drug Discovery and Safety Pharmacology assessment The largest group of chapters discuss different therapeutic areas and include Cardiovascular and renal pharmacology Endocrine pharmacology Neuropsychopharmacology Pulmonary Pharmacology Gastrointestinal pharmacology Poisons venoms and toxins Drugs on skeletal muscle the Pharmacotherapy of inflammation Reproductive pharmacology Pain pharmacology and analgesia The final group of chapters discuss new approaches and include Pharmacogenetics and pharmacogenomics Immunopharmacology and Gene therapy These two volumes are aimed at the following a wide spectrum of audiences from the merely curious to those seeking in depth knowledge University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Synaptic Modifications and Memory Leon L. Voronin, 2012-12-06 Understanding of memory and learning is one of the major goals of neuroscientists and psychologists The author first introduces the reader into the current state of knowledge of the mechanisms underlying memory by providing extensive reviews of contemporary results including behavioural approaches and molecular studies He presents results of his group obtained by analysing electrical activity including single neuron measures As a major experimental model the phenomenon of hippocampal long term potentiation was studied The so called quantal analysis a quantitative method was applied to study mammalian brain plasticity Short and long term synaptic plasticities were registered both in vivo and in vitro mammalian brain preparations Results show the involvement of mainly presynaptic location in memory however the possible involvement of postsynaptic mechanisms is indicated by changes in quantal amplitude as shown by the author

Sustainable Human Development in the Twenty-First Century - Volume I Ismail Sirageldin, 2008-12-31 Sustainable Human Development in the Twenty First Century is a component of Encyclopedia of Human Resources Policy Development and Management in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty Encyclopedias The volume of Human Development examines the state and nature of human development and identifies factors that determine its promotion for the twenty first century A general goal since the ultimate goal for human development is to enhance the quality of human life However the concept quality of human life is not well defined It is determined by a set of interrelated factors that cut across many disciplines with varied perspectives and paradigms These include the prevailing culture health status economic performance technological development political and

social conditions the building of human capacity and capabilities and institutional development on the local and global levels. For example in an environment characterized by a better quality of human life it is expected that people will be able to lead long and productive lives. They are also expected to enjoy good health, have access to knowledge and educational opportunities and be treated by all with respect in a socially equitable and dignified manner. In the sphere of political economy they are expected to have the opportunity to participate in governance decisions that affect their lives and the community in which they live and to have the potential to earn sufficient income to supply themselves with adequate nutrition, shelter and other material and aesthetic needs. Furthermore people are expected to maintain a sustainable environment and equitable social contracts across space and generations especially in the context of the evolving global governance. The volume of Sustainable Human Development in the Twenty First Century is divided into five topics which are then expanded into multiple subtopics each as a chapter presented in two volumes. The first is Major issues in Human Development and provides an over view of the Topic with emphasis on the sociological foundation of human development. The second Topic Diversity and Historical Processes reviews the historical and technological processes which have led to the present state of human diversity and differentiation. The third Topic Causes of Global Change focuses on whether it is possible in the present global environment to enlarge people's capabilities so that economic progress may be translated into a multidimensional human happiness. The fourth Topic Consequences of Global Change examines global change not in the narrow sense of short term economic change but rather as historical waves of long term development. The fifth Topic on Planning Strategies reviews current practice and projects challenges in the next century. These two volumes are aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers and Decision Makers and NGOs.

Neurobiology Franco Conti, Vincent Torre, 2012-12-06. Understanding how the brain works is undoubtedly the greatest challenge for human intelligence and one of the most ambitious goals of contemporary science. We are certainly far from this goal but significant advancements in several fields of Neuroscience and Neurobiology are being obtained at an increasing pace. The NATO ASI School in Neurobiology held in Erice May 2-12 1995 as the 23rd Course of the International School of Biophysics provided an update on three basic topics: Biophysics and Molecular Biology of Ion Channels, Sensory Transduction and Higher Order Functions. Current knowledge on these subjects was covered by formal lectures and critical discussions between lecturers and participants. This book collects original contributions from those scientists who attended the School. Many students presented their results in poster sessions, steering lively informal discussions. A selection of these contributions is also included. A major portion of the program of the School was devoted to a general overview of current trends of thought and experimental approaches in neurobiology, emphasising the importance of understanding molecular aspects of the elementary events underlying sensory transduction and processing in the nervous system without indulging however in a pure reductionistic

view of such complex phenomena Recent studies of molecular biology and the electrophysiology of heterologously expressed ionic channels have shed new light on the molecular mechanisms underlying ionic permeation of excitable membranes and its regulation by physical and chemical parameters
