*Theism in the Light of Present Science and Philosophy* James Iverach,1899     **Trinity and Organism** James Eglinton,2012-03-29 This book explores the organic motif found throughout the writings of the Dutch Calvinist theologian Herman Bavinck 1854 1921 Noting that Bavinck uses this motif at key points in the most important loci of theology Christology general and special revelation ecclesiology and so forth it seems that one cannot read him carefully without particular attention to his motif of choice the organic By examining the sense in which Bavinck views all of reality as a beautiful balance of unity in diversity James Eglinton draws the reader to Bavinck s constant concern for the doctrine of God as Trinity If God is the Father the Son and the Holy Spirit Bavinck argues the creation must be more akin to an organism than a machine Trinity and organism are thus closely linked concepts Eglinton critiques and rejects the two Bavincks one orthodox and the other modern hermeneutic so commonplace in discussions of Bavinck s theology Instead this book argues for a reunited Herman Bavinck as a figure committed to the participation of historic orthodox theology in the modern world

**A Life Committed to Its Intended Anchorage and Soar** Donald L. Yates, 2011-07-08 Who are we Why are we here What is the true meaning for our existence Each of these questions provides a general intention to answer in this book Questions about the purpose of life for human beings are not new as book topics for nonfiction category book titles Nevertheless author Donald L Yates interest in approaching this and similar parallel questions is in investigating the links ties connections and other illustrations of harmony and balance between spiritual principles in their broadest sense and sound science With such a discovery of connectedness and agreement between science and universal spiritual principles there are thus the wider implications for humankinds purpose in living and for other larger questions of humankinds behavior actions and existence Moreover this book is poised to add a particular significant contribution to the ongoing debate between creationism and evolutionary theory in public education And while the central theme most recently fostering the debate has been what constitutes good science what is alleged as being the universal consensus within the scientific community of evolution theory unqualified merit is far from being an empirically verifiable credence It is this authors view that such an announced state of universal support for what has been described as scientific consensus on evolution theory has no basis in fact For those who retain the literalist interpretations and beliefs of the origins of the universe as found in Genesis from the Bible one should find solace in the considerable evidence that this book brings to the factual basis for creationism as the framework and foundation for the origins of the world and universe
