**Looking at the Invisible Universe** James Jespersen, Jane Fitz-Randolph, 1990 Discusses the aspects of our universe that we do not see and how they were discovered

**The Invisible Universe** Matthew Bothwell, 2021-11-11 From the discovery of entirely new kinds of galaxies to a window into cosmic prehistory Bothwell shows us the Universe as we've never seen it before literally Since the dawn of our species people all over the world have gazed in awe at the night sky But for all the beauty and wonder of the stars when we look with just our eyes we are seeing and appreciating only a tiny fraction of the Universe What does the cosmos have in store for us beyond the phenomena we can see from black holes to supernovas How different does the invisible Universe look from the home we thought we knew Dr Matt Bothwell takes us on a journey through the full spectrum of light and beyond revealing what we have learned about the mysteries of the Universe This book is a guide to the ninety nine per cent of cosmic reality we can't see the Universe that is hidden right in front of our eyes It is also the endpoint of a scientific detective story thousands of years in the telling It is a tour through our Invisible Universe

Sample Book Insights

- 1 Light is the tool through which we understand our cosmos Everything we know about our place in the Universe is based on light Light is a wonder that we are so familiar with in our everyday lives that we can easily overlook how strange it really is
- 2 The idea that light is produced by sources and then enters our eyes is a modern one and was not accepted by many philosophers throughout history The ancient Greek philosopher Democritus believed that all matter is made of tiny atoms that are constantly expelling ghostly images called eidola that fly through the air until they enter our eyes
- 3 The Scientific Revolution which took place hundreds of years later was made possible by the advances in science made by the Arab astronomer Hasan Ibn al Haytham His ideas about light which were new and revolutionary allowed us to see the Universe in a new way
- 4 The speed of light was measured first by astronomy where distances of millions of kilometres are common The first good estimate of the speed of light came from Galileo who saw the moons of Jupiter orbiting around their parent planet
