Blum, 1997-06-27. This book is aimed at scientists, technologists, engineers, and undergraduate and graduate students involved in analytical and process biochemistry and biotechnology. It reviews the potentialities of light-emitting reactions associated with the sensor approach. The book introduces the concepts of sensors and biosensors and places bio and chemi-luminescent sensors in the general context of biosensors. It then briefly describes luminescence phenomena and provides some basic knowledge necessary for understanding and exploiting light-emitting reactions. These luminescence reactions, important from an analytical standpoint, are described. Also, the applications of bio and chemi-luminescence, which make use of immobilized reagents, are explained.
