High-Performing Self-Managed Work Teams Dale E. Yeatts, Cloyd Hyten, 1997-11-26 Since the mid 1970s pressure from international competition has forced U S businesses to look for better ways to achieve and maintain a competitive position At

the same time public organizations have been asked to produce their services with fewer dollars. The result of these trends has been a growing urgency among public and private organizations to find new ways of reducing their expenses while maintaining or increasing productivity and quality. One popular tool is the self-managed work team (SMWT). How is it different than a work group or short-term team? Which problems compel an organization to create an SMWT? What factors explain successful SMWTs? What must the organization do to develop high performance, cost-effective teams? In *High Performing Self-Managed Work Teams*, Dale E. Yeatts and Cloyd Hyten, Principle Investigators for the three-year National Science Foundation study of the performance of SMWTs, answer these questions and thoroughly examine the most widely accepted theories that attempt to explain SMWT performance. They introduce a synthesis of these theories based on 10 case studies from three different settings: manufacturing, public service, and health care. In an accessible style, the authors lead students and professionals to better understand the theory behind SMWTs as well as the practical aspects of when to use SMWTs to find solutions and how to develop achieving teams. This book appeals to practitioners and scholars in management, human resources, organization studies, industrial psychology, public administration, organizational communication, marketing, sociology, public health, and nursing.

Team Teaching Kathryn M. Plank, 2023-07-03. For those considering adopting team teaching or interested in reviewing their own practice, this book offers an overview of this pedagogy, its challenges and rewards, and a rich range of examples in which teachers present and reflect upon their approaches. The interaction of two teachers, both the intellectual interaction involved in the design of the course and the pedagogical interaction in the teaching of the course, creates a dynamic environment that reflects the way scholars make meaning of the world. The process naturally breaks down the teacher-centered classroom by creating a scholarly community in which teachers and students work together to understand important ideas and where students don't just learn content but begin to understand how knowledge is constructed, grasp the connections between disciplines as well as their different perspectives, see greater coherence in the curriculum, and appreciate how having more than one teacher in the classroom leads naturally to dialogue and active learning. Each of the five examples in this book shares the story of a course at a different institution, and each is designed to reflect a number of different variables in team-taught courses. They represent courses in a variety of different disciplines, including the sciences, social sciences, humanities, and the arts, and at a range of levels from first-year seminars to graduate courses. They also illustrate a number of different models for instructional teams, such as faculty from the same disciplines.

from related disciplines from two very different disciplines from different institutions and one pairing of a faculty member and a staff member This book provides insight into the impact of team teaching on student learning and on faculty development It also addresses the challenges both pedagogical and administrative that need to be addressed for team teaching to be effective
