Making Better Environmental Decisions An Alternative To Risk Assessment Hb:

Making Better Environmental Decisions Mary O'Brien, Environmental Research Foundation (Annapolis, Md.), 2000
For the past quarter century government and the private sector have relied heavily on risk assessment for making decisions allowing widespread environmental deterioration In this book Mary O'Brien recommends a simple yet profound shift to another decision making technique alternatives assessment Instead of asking how much of a hazardous activity is safe which translates into how much damage the environment can tolerate alternatives assessment asks how we can avoid or minimize damage while achieving society's goals Alternatives assessment is a simple commonsense alternative to risk assessment It is based on the premise that it is not acceptable to damage human and nonhuman health or the environment if there are reasonable alternatives The approach calls for taking precautionary measures even if some cause and effect relationships have not been fully established scientifically The process must involve an examination of the full range of alternatives including no action at all Equally important it must be democratic and include potentially affected parties O'Brien not only makes a persuasive case for alternative assessment she tells how to implement it She also shows how this technique has profound implications for public health for our stewardship of the environment and for a truly democratic government Published in association with the Environmental Research Foundation **Tehachapi Renewable Transmission Project (TRTP)** ,2010 *Environmental Risk Assessment* Ted Simon, 2019-12-06 The purpose of risk assessment is to support science based decisions about how to solve complex societal problems Indeed the problems humankind faces in the 21st century have many social political and technical complexities Environmental risk assessment in particular is of increasing importance as health and safety regulations grow and become more complicated *Environmental Risk Assessment A Toxicological Approach* 2nd Edition looks at various factors relating to exposure and toxicity human health and risk In addition to the original chapters being updated and expanded upon four new chapters discuss current software and platforms that have recently been developed and provide examples of risk characterizations and scenarios Features Introduces the science of risk assessment past present and future Provides environmental sampling data for conducting practice risk assessments Considers how bias and conflict of interest affect science based decisions in the 21st century Includes fully worked examples case studies discussion questions and suggestions for additional reading Discusses new software and computational platforms that have developed since the first edition Aimed at the next generation of risk assessors and students who need to know more about developing conducting and interpreting risk assessments the book delivers a comprehensive view of the field complete with sufficient background to enable readers to probe for themselves the science underlying the key issues in environmental risk *Energy Abstracts for Policy Analysis* ,1984 **Index to Legal Periodicals & Books** ,2006 *Risk Assessment of Chemicals: An Introduction* C.J. van Leeuwen, T.G.
