## **Making Decisions That Matter How People Face Important Life Choices:**

**Making Decisions That Matter** Kathleen M. Galotti, 2005-08-22 Researchers studying decision making have traditionally studied the phenomenon in the laboratory with hypothetical decisions that may or may not involve the decision maker's values, passions, or areas of expertise. The assumption is that the findings of these well-controlled laboratory studies will shed light on the important decisions people make in their everyday lives. This book examines that assumption. The volume begins by covering four basic phases of decision making: setting or clarifying goals, gathering information, structuring the decision, and making a final choice. Comprehensive reviews of existing literature on each of these topics is provided. Next, the author examines differences in decision making as a function of several factors not typically discussed in the literature: the type of decision being made (e.g., legal, medical, moral) and the existence of individual differences in the decision maker (developmental differences, individual differences in style or temperament, differences as a function of expertise). The author then examines the topic of group decision making, contrasting it with individual decision making. The volume concludes with some observations and suggestions for improving people's everyday decision making. This book is intended for use as a core textbook or supplement for courses in psychology, education, or allied disciplines. It will also be an invaluable resource for people who work with people making decisions in various applied settings, such as schools, universities, and health care centers.

**Advances in Entrepreneurial Finance** Rassoul Yazdipour, 2010-12-17 *Advances in Entrepreneurial Finance* brings together contributions from researchers from the fields of entrepreneurship, behavioral finance, psychology, and neuroscience to shed new light on the dynamics of decision making and risk taking by entrepreneurs and venture capitalists (VCs). Every new venture requires access to capital at competitive interest rates and much has been written on general entrepreneurship by management scholars and financial contracting by financial economists using traditional finance theory with all its highly restrictive assumptions regarding decision makers' cognitive capabilities and behavior. But recent developments in behavioral finance can now be applied to understand how entrepreneurs and VCs perceive risk and uncertainty and how they decide and act accordingly. Showcasing the latest research, this volume demonstrates that findings from the behavioral and neuroscience arenas can and do explain decision making by entrepreneurs and venture investors in the real world. Consequently, such findings have practical implications not only for entrepreneurs, venture capitalists, and their advisors but also all government agencies and NGOs that want to support product and technological innovation, capital formation, job creation, and economic development.

Adolescent Psychological Development David Moshman, 2005 The huge and fractured literature on adolescence challenges both students and scholars For students there is too much to learn and too little coherence across topics to enable deeper understanding For scholars there are few integrative visions to connect minitheories research programs and practical concerns In the first edition of this advanced text Moshman provided a constructivist synthesis of the literatures of cognitive moral and identity development from the classic universalist theories of Piaget Kohlberg and Erikson through the more pluralist research and theorizing of the late 20th century Without assuming any prior knowledge of psychology he introduced and coordinated basic concepts to enable students to wrestle with the questions of concern to experts and help experts see those concerns from a larger perspective In this thoroughly updated second edition Moshman develops his conceptualization of advanced psychological development in adolescence and early adulthood and proposes in a new chapter a conception of rational moral identity as a developmental ideal Unlike the prototypical changes of early childhood advanced psychological development cannot be understood as progress through universal stages to a universally achieved state of maturity Progress is possible however through rational processes of reflection coordination and social interaction
