Quantitative Health Risk Analysis Methods Louis Anthony Cox Jr., 2006-03-17 This book grew out of an effort to salvage a potentially useful idea for greatly simplifying traditional quantitative risk assessments of the human health consequences of using antibiotics in food animals In 2001 the United States FDA's Center for Veterinary Medicine CVM FDA CVM 2001 published a risk assessment model for potential adverse human health consequences of using a certain class of antibiotics fluoroquinolones to treat flocks of chickens with fatal respiratory disease caused by infectious bacteria CVM's concern was that fluoroquinolones are also used in human medicine raising the possibility that fluoroquinolone resistant strains of bacteria selected by use of fluoroquinolones in chickens might infect humans and then prove resistant to treatment with human medicines in the same class of antibiotics such as ciprofloxacin As a foundation for its risk assessment model CVM proposed a dramatically simple approach that skipped many of the steps in traditional risk assessment The basic idea was to assume that human health risks were directly proportional to some suitably defined exposure metric In symbols $\text{Risk} \propto \text{Exposure}$ where Exposure would be defined in terms of a metric such as total production of chicken contaminated with fluoroquinolone resistant bacteria that might cause human illnesses and Risk would describe the expected number of cases per year of human illness due to fluoroquinolone resistant bacterial infections caused by chicken and treated with fluoroquinolones

Multicriteria Decision Making Timothy Havranek,Doug MacNair,2023-06-06

Public corporations and private businesses operate in an increasingly complex uncertain and interconnected world When evaluating investment decisions business managers can no longer base their decisions primarily on expected financial return They now must now consider a host of performance value measures i e criteria pertaining to issues such as environmental and social governance sustainability and stakeholder satisfaction In addition corporate managers must ensure that their investment decisions are aligned with the company s vision mission and values in order to maintain investor confidence and protect brand image Lastly to be truly successful business managers must assess the risks associated with each performance measure and manage their impacts during project implementation This book takes a pragmatic business and economics view towards evaluating competing investment alternatives and or capital project strategies It provides a practical step by step process using a structured decision analysis framework to evaluate understand quantify and measure project investment strategies in light of multiple stakeholder objectives and success criteria This process assists in helping stakeholders internal and external achieve a shared understanding of project issues and to facilitate convergence towards a mutually acceptable solution The approach considers available choices identified uncertainties constraints necessary tradeoffs and preferences so as to identify solutions that maximize overall benefits while

minimizing overall costs and risk A real world case study is presented in the early chapters and the process steps are demonstrated through application to this case study Recent advances in technology allow for investment strategies to be evaluated against multiple criteria within one integrated platform This book guides the reader in performing multi criteria decision analysis including the use of Monte Carlo simulation within an MS Excel environment using native MS Excel and as well as add in programs such Palisades Decision Tools suite Example model structures screen shots formulas and output results are provided throughout the book using an illustrative case study **Adversarial Risk Analysis** David L. Banks, Jesus M.
