## **Making Medicines Affordable:**

Making Medicines Affordable National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Ensuring Patient Access to Affordable Drug Therapies, 2018-04-01

Thanks to remarkable advances in modern health care attributable to science engineering and medicine it is now possible to cure or manage illnesses that were long deemed untreatable At the same time however the United States is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care Total medical expenditures are rapidly approaching 20 percent of the gross domestic product and are crowding out other priorities of national importance The use of increasingly expensive prescription drugs is a significant part of this problem making the cost of biopharmaceuticals a serious national concern with broad political implications Especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years finding a way to make prescription medicines and health care at large more affordable for everyone has become a socioeconomic imperative Affordability is a complex function of factors including not just the prices of the drugs themselves but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts Therefore any solution to the affordability issue will require considering all of these factors together The current high and increasing costs of prescription drugs coupled with the broader trends in overall health care costs is unsustainable to society as a whole Making Medicines Affordable examines patient access to affordable and effective therapies with emphasis on drug pricing inflation in the cost of drugs and insurance design This report explores structural and policy factors influencing drug pricing drug access programs the emerging role of comparative effectiveness assessments in payment policies changing finances of medical practice with regard to drug costs and reimbursement and measures to prevent drug shortages and foster continued innovation in drug development It makes recommendations for policy actions that could address drug price trends improve patient access to affordable and effective treatments and encourage innovations that address significant needs in health care

Rethinking Medications Jerry Avorn, 2025-04-22 A leading medical expert explains why too many of the medications Americans take are poorly evaluated overpriced or pose

unwarranted risks and what we can do to fix that Groundbreaking research has given us many remarkable new medicines but America's drug evaluation process once the envy of the world is being seriously compromised Under pressure from drugmakers the FDA has been lowering its approval standards and has let poorly effective or risky products enter the market while our prescription prices the highest in the world put crucial treatments beyond the reach of many In *Rethinking Medications* Dr Jerry Avorn explains how we got here and what we can do to ensure that our medicines are dependably effective safe and affordable Part of the problem is the power of pharma's biggest in Washington lobbying clout which influences members of Congress from both parties That leverage is extended by the FDA's growing dependence on fees the industry pays to get its drugs approved The increasingly revenue driven US healthcare system shapes the way doctors prescribe medications sometimes to the detriment of their clinical decisions Based on his decades of practice and research at Harvard Medical School and his role at the very center of many of these controversies Dr Avorn presents compelling clinical illustrations of these issues across the medical spectrum from cancer drugs to opioids from treatments for rare diseases to psychedelics Throughout he offers practical steps that consumers policymakers and practitioners can take to address these problems at a moment when our assumptions about scientific evidence regulation pricing and the role of government are being contested as never before

**Prescription for the People** Fran Quigley, 2017-11-15 In *Prescription for the People* Fran Quigley diagnoses our inability to get medicines to the people who need them and then prescribes the cure He delivers a clear and convincing argument for a complete shift in the global and U.S. approach to developing and providing essential medicines and a primer on how to make that change happen Globally 10 million people die each year because they are unable to pay for medicines that would save them The cost of prescription drugs is bankrupting families and putting a strain on state and federal budgets Patients' desperate need for affordable medicines clashes with the core business model of the powerful pharmaceutical industry which maximizes profits whenever possible It doesn't have to be this way Patients and activists are aiming to make all essential medicines affordable by reclaiming medicines as a public good and a human right instead of a profit making commodity In this book Quigley demystifies statistics and terminology offers solutions to the problems that block universal access to medicines and provides a road map for activists wanting to make those solutions a reality

healthcare and access to medication Presenting the debates over patents trade and the Agreement on Trade Related Aspects of Intellectual Property Rights TRIPS Agreement as it galvanized non state and nonbusiness actors the book highlights how an alternative framing and understanding of pharmaceutical patent rights emerged as a public issue instead of a trade or IP issue The book thus offers an important analysis of the legal and political dynamics through which the contest for access to lifesaving medication has been and will continue to be fought In addition to academics working in the areas of international law development and public health this book will also be of interest to policy makers state actors and others with relevant concerns working in nongovernmental and international organizations

experts join forces to reckon with how cities are changing in the face of existential threats the pandemic has only accelerated Cities can make us sick That s always been true diseases spread more easily when more people are close to one another And cities have been demonized as breeding grounds for vice and crime from Sodom and Gomorrah on But cities have flourished nonetheless because they are humanity s greatest invention indispensable engines for creativity innovation wealth and civilization itself But cities now stand at a crossroads During the global COVID crisis cities grew silent the normal forms of socializing ground to a halt How permanent are these changes Advances in technology mean that many people can opt out of city life as never before Will they Are we on the brink of a post urban world City life will survive but individual cities face terrible risks argue Edward Glaeser and David Cutler and a wave of urban failure would be absolutely disastrous In terms of intimacy and inspiration nothing can replace what cities offer But great cities have always demanded great management and our current crisis has exposed fearful gaps in our capacity for good governance In America Glaeser and Cutler argue deep inequities in health care and education are a particular blight on the future of our cities solving them will be the difference between our collective good health and a downward spiral to a much darker place      *Medicine Price Surveys, Analyses and Comparisons* Sabine Vogler,2018-10-23 Medicine Price Surveys Analyses and Comparisons establishes guidelines for the study and implementation of pharmaceutical price surveys analyses and comparisons Its contributors evaluate price survey literature discuss the accessibility and reliability of data sources and provide a checklist and training kit on conducting price surveys analyses and comparisons Their investigations survey price studies while accounting for the effects of methodologies and explaining regional differences in medicine prices They also consider policy objectives such as affordable access to medicines and cost containment as well as options for improving the effectiveness of policies Provides guidance for planning and implementing pharmaceutical pricing policies and systems Reviews external price referencing systems Explains common baselines for interpreting price surveys Defines pharmaceutical price terminology and nomenclature      *Digital technologies for health financing* ,2021-03-11
