Making Geometry Come Alive Student Activities And Teacher Notes:

Making Geometry Come Alive Alfred S. Posamentier, 2000-07-22 Activities in Geometry is a set of versatile enrichment exercises that covers a very broad range of topics in geometry Euclidean post Euclidean and non Euclidean Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to students and show them that there is much more to geometry than proving theorems To demonstrate this aspect of geometry it is necessary for the investigation to be quite different from what students encounter in their basal texts different in both substance and form Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject *Making Algebra Come Alive*

The Secrets of Triangles Alfred S. Posamentier,Ingmar Lehmann,2012-08-28 Requiring no more than a knowledge of high school mathematics and written in clear and accessible language this book will give all readers a new insight into some of the most enjoyable and fascinating aspects of geometry Everyone knows what a triangle is yet very few people appreciate that the common three sided figure holds many intriguing secrets For example if a circle is inscribed in any random triangle and then three lines are drawn from the three points of tangency to the opposite vertices of the triangle these lines will always meet at a common point no matter what the shape of the triangle This and many more interesting geometrical properties are revealed in this entertaining and illuminating book about geometry Flying in the face of the common impression that mathematics is usually dry and intimidating this book proves that this sometimes daunting abstract discipline can be both fun and intellectually stimulating The authors two veteran math educators explore the multitude of surprising relationships connected with triangles and show some clever approaches to constructing triangles using a straightedge and a compass Readers will learn how they can improve their problem solving skills by performing these triangle constructions The lines points and circles related to triangles harbor countless surprising relationships that are presented here in a very engaging fashion *The Mathematical Gazette* ,2001 *Bibliographic Guide to Education* ,2001 lists publications
