M. Letherman,2014-05-18 International Series in Heating and Ventilation Volume 15 Automatic Controls for Heating and Air Conditioning Principles and Applications details the relationship between theory and practice in implementing an automated system for thermal regulation The title first deals with the sensors and methods for quantifying the two variables mainly of interest in building services systems temperature and humidity Next the selection covers the application of controls to a number of specific areas of building environmental services The text also discusses controller mechanisms and circuits along with controller characteristics The fifth chapter deals with basic theory of linear automatic control while the sixth chapter talks about the analysis of non linear systems The book will be of great interest to engineers and technicians who deal with cooling and heating systems <u>Modern Control System Theory</u> M. Gopal,1993 About the book The book provides an integrated treatment of continuous time and discrete time systems for two courses at postgraduate level or one course at undergraduate and one course at postgraduate level It covers mainly two areas of modern control theory namely system theory and multivariable and optimal control The coverage of the former is quite exhaustive while that of latter is adequate with significant provision of the necessary topics that enables a research student to comprehend various technical papers The stress is on interdisciplinary nature of the subject Practical control problems from various engineering disciplines have been drawn to illustrate the potential concepts Most of the theoretical results have been presented in a manner suitable for digital computer programming along with the necessary algorithms for numerical computations **Graduate Announcement** University of Michigan--Dearborn,1984
