Mathematical Legacy Of Eduard Čech:

The Mathematical Legacy of Eduard Čech KATETOV, SIMON, 2012-12-06 The work of Professor Eduard Čech had a significant influence on the development of algebraic and general topology and differential geometry This book which appears on the occasion of the centenary of Čech's birth contains some of his most important papers and traces the subsequent trends emerging from his ideas The body of the book consists of four chapters devoted to algebraic topology Čech-Stone compactification dimension theory and differential geometry Each of these includes a selection of Čech's papers a brief summary of some results which followed from his work or constituted solutions to the problems he posed and several selected papers by various authors concerning the areas of study he initiated The book also contains a concise biography borrowed with minor changes from the book *Topological papers of E. Čech* a list of Čech's publications and a very brief note on his activity in the didactics of mathematics The editors wish to express their sincere gratitude to all who contributed to the completion and publication of this book

Natural Communication Elias Zafiris, 2021-03-08 In *Natural Communication* the author criticizes the current paradigm of specific goal orientation in the complexity sciences and proposes an alternative that envisions a fundamental architectonics of communication His model of natural communication encapsulates modern theoretical concepts from mathematics and physics in particular category theory and quantum theory From these fields it abstracts precise concepts such as to constitute a terminological basis for this theory which offers the opportunity to open up novel ways of thinking about complexity The author is convinced that it is only possible to establish a continuity and coherence with contemporary thinking especially with respect to complexity through looking into the past

Handbook of the History of General Topology C.E. Aull, R. Lowen, 1997-03-31 This book is the first one of a work in several volumes treating the history of the development of topology The work contains papers which can be classified into 4 main areas Thus there are contributions dealing with the life and work of individual topologists with specific schools of topology with research in topology in various countries and with the development of topology in different periods The work is not restricted to topology in the strictest sense but also deals with applications and generalisations in a broad sense Thus it also treats e.g. categorical topology interactions with functional analysis convergence spaces and uniform spaces Written by specialists in

the field it contains a wealth of information which is not available anywhere else

Development Of Mathematics

Between The World Wars, The: Case Studies, Examples And Analyses Martina Becvarova, 2021-05-14 The Development of Mathematics Between the World Wars traces the transformation of scientific life within mathematical communities during the interwar period in Central and Eastern Europe specifically in Germany Russia Poland Hungary and Czechoslovakia Throughout the book in depth mathematical analyses and examples are included for the benefit of the reader World War I heavily affected academic life In European countries many talented researchers and students were killed in action and scientific activities were halted to resume only in the postwar years However this inhibition turned out to be a catalyst for the birth of a new generation of mathematicians for the emergence of new ideas and theories and for the surprising creation of new and outstanding scientific schools The final four chapters are not restricted to Central and Eastern Europe and deal with the development of mathematics between World War I and World War II After describing the general state of mathematics at the end of the 19th century and the first third of the 20th century three case studies dealing with selected mathematical disciplines are presented set theory potential theory combinatorics in a way accessible to a broad audience of mathematicians as well as historians of mathematics

Dimension Theory Michael G. Charalambous, 2019-10-08 This book covers the fundamental results of the dimension theory of metrizable spaces especially in the separable case Its distinctive feature is the emphasis on the negative results for more general spaces presenting a readable account of numerous counterexamples to well known conjectures that have not been discussed in existing books Moreover it includes three new general methods for constructing spaces Mrowka's ψ spaces van Douwen's technique of assigning limit points to carefully selected sequences and Fedorchuk's method of resolutions Accessible to readers familiar with the standard facts of general topology the book is written in a reader friendly style suitable for self study It contains enough material for one or more graduate courses in dimension theory and or general topology More than half of the contents do not appear in existing books making it also a good reference for libraries and researchers
