Electromagnetic Materials - Proceedings Of The International Conference On Materials For Advanced Technologies (Symposium P) Hock Lim, Serguei Matitsine, Yeow Beng Gan, Ling Bing Kong, 2007-06-20 The contributions to this volume deliberate the electrical and magnetic properties of materials relevant to the design of unconventional antennas microwave circuits components anti reflection media and coatings EMI shielding structures radomes etc Though a classical research topic some recent advancements in technology have led to new capabilities to create and control fine scale structures This has inspired scientists to develop new materials with exceptionally high permittivity or permeability as well as metamaterials or negative index materials with unusual electromagnetic properties Novel materials based on the use of active devices to control their electromagnetic performance have also been proposed The multi disciplinary nature of these new materials has brought together researchers from materials science physics and electrical engineering to explore and deepen our current understanding of electromagnetic wave propagation A wide range of new commercial defence applications of these materials is expected to emerge in the near future

Inverse Problems in Physical Diagnostics Konstantin P. Gaikovich, 2004 Unlike direct problems related to the solution of differential equations inverse problems are typically expressed by integral equations These equations relate media parameters to parameters of a measured signal or input parameters to output ones in various measurement systems The solution of integral equations is with few exceptions an ill posed problem and additional a priori information about the exact solution should be used to solve such problems The specific character of the a priori information determines various regularisation methods that are in use here to obtain an approximate solution Tikhonov's method statistical regularisation method methods based on the use of additional equations or restrictions or of models with

limited number of unknown parameters The main point of this book is the study of convergence properties of each method and the wide application of numerical modelling that gives the accuracy of the solution in a chosen metric It is an unaccustomed procedure for physicists but because there is no proportionality between data and solution errors in ill posed problems such approach is inevitable *Proceedings of Symposium P, Electromagnetic Materials* Hock Lim,2007 The contributions to this volume deliberate the electrical and magnetic properties of materials relevant to the design of unconventional antennas microwave circuits components anti reflection media and coatings EMI shielding structures radomes etc Though a classical research topic some recent advancements in technology have led to new capabilities to create and control fine scale structures This has inspired scientists to develop new materials with exceptionally high permittivity or permeability as well as metamaterials or negative index materials with unusual electromagnetic properties Novel materials based on the use of active devices to control their electromagnetic performance have also been proposed The multi disciplinary nature of these new materials has brought together researchers from materials science physics and electrical engineering to explore and deepen our current understanding of electromagnetic wave propagation A wide range of new commercial defence applications of these materials is expected to emerge in the near future Conference Proceedings ,2002 **Index of Conference Proceedings** British Library. Andriychuk,2019-09-12 The book is devoted to the synthesis problems that arise in the theory and design of radiating systems antennas The characteristics of desired amplitude are data placed into a synthesis problem A synthesis problem belongs to a class of inverse problems and its aim is to

determine a distribution of current or fields in an antenna which produces the amplitude radiation characteristic as close as possible to the desired one Freedom of choice of phase distribution of the desired radiation pattern RP is used as an additional possibility of better approximation to such RPs This book studies various different types of antennas and arrays as the radiation systems under consideration A special class of problems related to acoustic and electromagnetic scattering on a set of bodies particles of small size is also discussed while the constructive procedures of creating inhomogeneous materials with specific properties are proposed

Advanced Ultrawideband Radar James D. Taylor, 2016-12-19 This book presents the latest theory developments and applications related to high resolution materials penetrating sensor systems An international team of expert researchers explains the problems and solutions for developing new techniques and applications Subject areas include ultrawideband UWB signals propagation and scattering materials penetrating radar techniques for small object detection and imaging biolocation using holographic techniques tomography medical applications nondestructive testing methods electronic warfare principles through the wall radar propagation effects and target identification through measuring the target return signal spectrum changes

Non-Stationary Electromagnetics Alexander Nerukh, Trevor Benson, 2018-10-26 This book is devoted to the investigations of non stationary electromagnetic processes The investigations are undertaken analytically mainly using the Volterra integral equations approach The book contains a systematic statement of this approach for the investigations of electrodynamics phenomena in the time domain and new results and applications in microwave techniques and photonics Particular consideration is given to electromagnetic transients in time varying media and their potential applications The approach is formulated and electromagnetic phenomena are investigated in detail for a hollow metal waveguide which contains moving dielectric or plasma bounded medium and dielectric waveguides with time varying medium inside a core
