William I. Newman,2016-05-03 An essential textbook on the mathematical methods used in geophysics and space physics Graduate students in the natural sciences including not only geophysics and space physics but also atmospheric and planetary physics ocean sciences and astronomy need a broad based mathematical toolbox to facilitate their research In addition they need to survey a wider array of mathematical methods that while outside their particular areas of expertise are important in related ones While it is unrealistic to expect them to develop an encyclopedic knowledge of all the methods that are out there they need to know how and where to obtain reliable and effective insights into these broader areas Here at last is a graduate textbook that provides these students with the mathematical skills they need to succeed in today s highly interdisciplinary research environment This authoritative and accessible book covers everything from the elements of vector and tensor analysis to ordinary differential equations special functions and chaos and fractals Other topics include integral transforms complex analysis and inverse theory partial differential equations of mathematical geophysics probability statistics and computational methods and much more Proven in the classroom *Mathematical Methods for Geophysics and Space Physics* features numerous exercises throughout as well as suggestions for further reading Provides an authoritative and accessible introduction to the subject Covers vector and tensor analysis ordinary differential equations integrals and approximations Fourier transforms diffusion and dispersion sound waves and perturbation theory randomness in data and a host of other topics Features numerous exercises throughout Ideal for students and researchers alike An online illustration package is available to professors *Geophysical Data Inversion Methods and Applications* Andreas Vogel,2013-03-09

Ronald S. Bell,1993 **Theory and Practice of Geophysical Data Inversion** Andreas Vogel,2014-03-12 The contributions to this volume cover a wide spectrum of recent developments in geophysical data inversion including basic mathematics and general theory numerical methods as well as computer implementation of algorithms Most of the papers are motivated by problems arising from geophysical research and applications both on a global scale and with respect to local geophysical surveys underlining the increasing importance of geophysical exploration methods in various fields such as structural

geology prospecting for mineral and energy resources hydro geology geotechnology environmental protection and archaeology The first section of the book deals with basic mathematics and general theory underlying geophysical data inversion Papers presented here are concerned with stabilization algorithms to solve ill posed inverse problems sensitivity of kernel function estimations to random data errors and reduction of errors in inverse modelling of response functions by linear constraints numerical procedures for approximating the solution to boundary value problems accuracy and stability of inverse ill posed problems constituted by problems of moments and fast Fourier transforms for solving potential field problems The second section contains papers on gravity and magnetics dealing with the solvability of the inverse gravimetric problem for sources represented by point masses and other elementary solution of the inverse problem in cases of nonuniformly distributed data as obtained by palaeomagnetic studies satellite observations and surface projections of buried archaeological targets by inverse filtering of geomagnetic data
