

RESEARCH IN MATHEMATICAL BIOLOGY

- Identify unresolved biological question: typically I study questions related to cancer growth and treatment
- Understand the biology well enough to develop a *mathematical model* of the biological problem
- Compare model predictions to biological data
- Re-work model until it well-describes biological data
- Use model to seek answers to unresolved biological question

$$\frac{dU}{dt} = rU - \beta \frac{UV}{N} - (c_0 + c_{\text{tox}} I) \frac{UT}{N}, \quad U(0) = U_0$$

$$\frac{dI}{dt} = \beta \frac{UV}{N} - \delta_1 I - (c_0 + c_{\text{tox}} I) \frac{IT}{N}, \quad I(0) = 0,$$

$$\frac{dV}{dt} = w_V(t) + \alpha \delta_1 I - \delta_2 V, \quad V(0) = 0,$$

$$\frac{dT}{dt} = c_1 I + \chi_A A + \chi_D D - \delta_3 T, \quad T(0) = 0,$$

$$\frac{dA}{dt} = c_2 I - \delta_4 A, \quad A(0) = 0,$$

$$\frac{dD}{dt} = w_D(t) - \delta_5 D, \quad D(0) = 0,$$

Mathematical Problems In The Biological:

Mathematical Problems in the Biological Sciences, 1962 **Mathematical Problems in the Biological Sciences** Sol I. Rubinow, 1973-01-01 This book represents a small and highly selective sample of the quantitative approach to biology The author encourages the reader to disseminate further the cause of mathematics applied to the biological sciences

Mathematical Problems in Biology P. van den Driessche, 2013-03-08 A conference on Some Mathematical Problems in Biology was held at the University of Victoria Victoria B C Canada from May 7 10 1973 The participants and invited speakers were mathematicians interested in problems of a biological nature and scientists actively engaged in developing mathematical models in biological fields One aim of the conference was to attempt to assess what the recent rapid growth of mathematical interaction with the biosciences has accomplished and may accomplish in the near future The conference also aimed to expose the problems of communication between mathematicians and biological scientists and in doing so to stimulate the interchange of ideas It was recognised that the topic spans an enormous breadth and little attempt was made to balance the very diverse areas Widespread active interest was shown in the conference and just over one hundred people registered The varied departments and institutions across North America from which the participants came made it both academically and geographically mixed The chief activity of the conference was the presentation of papers Nine invited guest speakers see table of contents each gave a one hour talk These covered a wide range of topics There were twenty five shorter twenty minute contributed papers and almost all papers were followed by a five minute question and discussion period Duplicated abstracts of presented papers were available at the meeting An evening informal discussion meeting of participants chaired by Dr A B Tayler and led by Drs E M Hagmeier E C *Mathematical Problems in the Biological Sciences* Sol I.

Mathematical Society,1962 **Biological Oscillators: Their Mathematical Analysis** Theodosios Pavlidis,2012-12-02

Biological Oscillators Their Mathematical Analysis introduces the main features of the dynamic properties of biological oscillators and the mathematical techniques necessary for their investigation It is not a comprehensive description of all known biological oscillators since this would require a much bigger volume as well as a different type of expertise Instead certain classes of biological oscillators are described and then only in as much detail as required for the study of their dynamics The opening chapter reviews fundamental mathematical concepts and techniques which will be used in the remainder of the book These include phase plane techniques asymptotic techniques of Krylov Bogoliubov and Mitopolski and the describing function Subsequent chapters discuss examples of biological oscillators phase shifts and phase response curves the entrainment of oscillators by external inputs the dynamics of circadian oscillators effects of changing environment on the dynamics of biological oscillators the features peculiar to populations of interacting oscillators and biological phenomena attributable to populations of oscillators **Towards a Mathematical Theory of Complex Biological Systems** C. Bianca,N. Bellomo,2011 This monograph has the ambitious aim of developing a mathematical theory of complex biological systems with special attention to the phenomena of ageing degeneration and repair of biological tissues under individual self repair actions that may have good potential in medical therapy The approach to mathematically modeling biological systems needs to tackle the additional difficulties generated by the peculiarities of living matter These include the lack of invariance principles abilities to express strategies for individual fitness heterogeneous behaviors competition up to proliferative and or destructive actions mutations learning ability evolution and many others Applied mathematicians in the field of living systems especially biological systems will appreciate the special class of integro differential equations offered here for modeling at the molecular cellular and tissue scales A unique perspective is also presented with a number of case studies in biological modeling Nonlinear Problems in the Physical Sciences and Biology I.
