

and elevations. A typical problem here is: Given the plan and elevation of a triangle and a line in space, to construct the plan and elevation of their point of intersection. The nomenclature is heavy however, and of no great interest to mathematicians.

On the other hand the book describes various geometrical figures up to hyperboloids, paraboloids, regular solids, semi-regular solids, and twisted curves.

On every other page are diagrams—some of them quite striking—which can be viewed stereoscopically through the colour filters provided. Chiefly because of these the book could be a welcome addition to a school or college library.

Programmed Modern Arithmetic—Introduction to Sets S-1, Pp. 28. Set Relations S-2, Pp. 30. Set Operations S-3, Pp. 28. 5s. 0d. each. 1965. (Heath/Harrap)

This is adventure playground, new material and new teaching methods. The topic is set language and a little of set notation. The method is that of programmed learning, the pupil progressing by simple steps, some very simple indeed, along the rosy path of knowledge. There are about 150 or 160 questions in each book and the reader is provided with a mask to hide the answers.

Whether this technique is suited to our own schools, as support for the teacher or to satisfy individual needs, is a matter for experiment. The ideas are necessarily developed at the pace of the weakest. The average grammar school first former should devour the first book in one lesson; the good pupil will find it tedious; but if we are to think of mathematics for all, and not for the elite alone, we must expect a slowing down and a wider search for ideas, no longer submerged under technique. Certainly the teacher of traditional mathematics will find no sets of drill and revision exercises, requiring mastery of technique, here. The teacher who is in search of new ideas will find them slowly, perhaps too slowly, developed in these books. They will help him in his own process of rethinking his aims.
