Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory Gebhard Böckle,Wolfram Decker,Gunter Malle,2018-03-22 This book presents state of the art research and survey articles that highlight work done within the Priority Program SPP 1489 Algorithmic and Experimental Methods in Algebra Geometry and Number Theory which was established and generously supported by the German Research Foundation DFG from 2010 to 2016 The goal of the program was to substantially advance algorithmic and experimental methods in the aforementioned disciplines to combine the different methods where necessary and to apply them to central questions in theory and practice Of particular concern was the further development of freely available open source computer algebra systems and their interaction in order to create powerful new computational tools that transcend the boundaries of the individual disciplines involved The book covers a broad range of topics addressing the design and theoretical foundations implementation and the successful application of algebraic algorithms in order to solve mathematical research problems It offers a valuable resource for all researchers from graduate students through established experts who are interested in the computational aspects of algebra geometry and or number theory **Perspectives on Social Psychology** Clyde Hendrick,2015-06-19 Originally published in 1977 this volume was intended to provide a relatively elementary and clear overview of some of the more important approaches to social psychology at the time There are a number of perspectives on this discipline but here instead of traditional theoretical approaches e g field theory role theory or S R the point of view is from the general perspective The first chapter approaches social psychology as an experimental science with the history and philosophic traditions discussed as well as the current state of the field Other chapters approach the discipline from the perspectives of symbolic interaction social development and ethology The final chapter is devoted to the uses of mathematical models in social psychology This volume was intended to serve as a helpful integration of the field and will still be useful as a text in its historical context

Psychology Library Editions: Social Psychology Various,2021-07-09 Psychology Library Editions Social Psychology 30 volume set brings together an eclectic mix of titles from a wealth of authors with diverse backgrounds seeking to understand human behaviour and interaction from a socio psychological perspective The series of previously out of print titles originally published between 1908 and 1993 includes those from some authors considered to be founders of social psychology and traces the development of the subject from its early foundations **OAR Cumulative Index of Research Results** United States. Air Force. Office of Aerospace Research,1963 **OAR Quarterly Index of Current Research Results** United States. Air Force. Office of Aerospace Research,1963 *Fuzzy Sets and Their Applications to Cognitive and Decision Processes* Lotfi A. Zadeh,King-Sun Fu,Kokichi Tanaka,2014-06-28 Fuzzy Sets and Their Applications to Cognitive and Decision Processes contains the proceedings of the U S Japan Seminar on Fuzzy Sets and Their Applications held at the University of California in Berkeley California on July 1 4 1974 The seminar provided a forum for discussing a broad spectrum of topics

related to the theory of fuzzy sets ranging from its mathematical aspects to applications in human cognition communication decision making and engineering systems analysis Comprised of 19 chapters this book begins with an introduction to the calculus of fuzzy restrictions followed by a discussion on fuzzy programs and their execution Subsequent chapters focus on fuzzy relations fuzzy graphs and their applications to clustering analysis risk and decision making in a fuzzy environment fractionally fuzzy grammars and their application to pattern recognition and applications of fuzzy sets in psychology An approach to pattern recognition and associative memories using fuzzy logic is also described This monograph will be of interest to students and practitioners in the fields of computer science engineering psychology and applied mathematics

Groups and Computation Larry Finkelstein,William M. Kantor,1993-01-01 This volume contains papers presented at the Workshop on Groups and Computation held in October 1991 The workshop explored interactions among four areas symbolic algebra and computer algebra theoretical computer science group theory and applications of group computation The relationships between implementation and complexity form a recurrent theme though the papers also discuss such topics as parallel algorithms for groups computation in associative algebras asymptotic behavior of permutation groups the study of finite groups using infinite reflection groups combinatorial searching computing with representations and Cayley graphs as models for interconnection networks *Combinatorial Group Theory* Daniel E. Cohen,1989-08-17 In this book the author aims to show the value of using topological methods in combinatorial group theory **The Cumulative Book Index** ,1963 A world list of books in the English language OAR Cumulative Index of Research Results , **Applied Finite Group Actions** Adalbert Kerber,2013-04-17 Also the present second edition of this book is an introduction to the theory of classification enumeration construction and generation of finite unlabeled structures in mathematics and sciences Since the publication of the first edition in 1991 the constructive theory of un labeled finite structures has made remarkable progress For example the first designs with moderate parameters were constructed in Bayreuth by the end of 1994 9 The crucial steps were the prescription of a suitable group of automorphisms i e a stabilizer and the corresponding use of Kramer Mesner matrices together with an implementation of an improved version of the LLL algorithm that allowed to find 0 1 solutions of a system of linear equations with the Kramer Mesner matrix as its matrix of coefficients of matrices of the The Kramer Mesner matrices can be considered as submatrices form A see the chapter on group actions on posets semigroups and lattices They are associated with the action of the prescribed group G which is a permutation group on a set X of points induced on the power set of X Hence the discovery of the first 7 designs with small parameters is due to an application of finite group actions This method used by A Betten R Laue A Wassermann and the present author is described in a section that was added to the manuscript of the first edi tion **Groups and Computation II** Larry Finkelstein, William M. Kantor, Consists of papers presented at the workshop on Groups and Computation held at DIMACS **Combinatorial Group Theory** Roger C. Lyndon,Paul E. Schupp,2015-03-12 From the reviews This book defines the boundaries of the subject now called

combinatorial group theory it is a considerable achievement to have concentrated a survey of the subject into 339 pages This includes a substantial and useful bibliography over 1100 items the book is a valuable and welcome addition to the literature containing many results not previously available in a book It will undoubtedly become a standard reference Mathematical Reviews AMS 1979 *The Mathematical Legacy of Wilhelm Magnus: Groups, Geometry and Special Functions* William Abikoff,Joan S. Birman,Kathryn Kuiken,1994 Wilhelm Magnus was an extraordinarily creative mathematician who made fundamental contributions to diverse areas including group theory geometry and special functions This book contains the proceedings of a conference held in May 1992 at Polytechnic University Brooklyn to honour the memory of Magnus The focus of the book is on active areas of research where Magnus influence can be seen The papers range from expository articles to major new research bringing together seemingly diverse topics and providing entry points to a variety of areas of mathematics Group Actions on Manifolds Reinhard Schultz,1985 Presents an understanding of the sorts of problems one studies in group actions and the methods used to study such problems This book features articles based upon lectures at the 1983 AMS IMS SIAM Joint Summer Research Conference Group Actions on Manifolds held at the University of Colorado The United States Catalog ,1965 **Group Theory From A Geometrical Viewpoint** Alberto Verjovski,Etienne Ghys,Andre Haefliger,1991-08-12 This proceedings presents the latest research materials done on group theory from geometrical viewpoint in particular Gromov s theory of hyperbolic groups Coxeter groups Tits buildings and actions on real trees All these are very active subjects *Algorithmic Problems in Groups and Semigroups* Jean-Camille Birget,Stuart Margolis,John Meakin,Mark V. Sapir,2012-12-06 This volume contains papers which are based primarily on talks given at an inter national conference on Algorithmic Problems in Groups and Semigroups held at the University of Nebraska Lincoln from May ll May 16 1998 The conference coincided with the Centennial Celebration of the Department of Mathematics and Statistics at the University of Nebraska Lincoln on the occasion of the one hun dredth anniversary of the granting of the first Ph D by the department Funding was provided by the US National Science Foundation the Department of Math ematics and Statistics and the College of Arts and Sciences at the University of Nebraska Lincoln through the College s focus program in Discrete Experimental and Applied Mathematics The purpose of the conference was to bring together researchers with interests in algorithmic problems in group theory semigroup theory and computer science A particularly useful feature of this conference was that it provided a framework for exchange of ideas between the research communities in semigroup theory and group theory and several of the papers collected here reflect this interac tion of ideas The papers collected in this volume represent a cross section of some of the results and ideas that were discussed in the conference They reflect a synthesis of overlapping ideas and techniques stimulated by problems concerning finite monoids finitely presented mono ids finitely presented groups and free groups **Two Against One** Theodore Caplow,1968 **Analytic Methods in Arithmetic Geometry** Alina Bucur,David Zureick-Brown,2019-11-22 In the last decade or so analytic methods have had

great success in answering questions in arithmetic geometry and number theory The School provided a unique opportunity to introduce graduate students to analytic methods in arithmetic geometry The book contains four articles Alina C Cojocaru s article introduces sieving techniques to study the group structure of points of the reduction of an elliptic curve modulo a rational prime via its division fields Harald A Helfgott s article provides an introduction to the study of growth in groups of Lie type with SL2 Fq and some of its subgroups as the key examples The article by tienne Fouvry Emmanuel Kowalski Philippe Michel and Will Sawin describes how a systematic use of the deep methods from adic cohomology pioneered by Grothendieck and Deligne and further developed by Katz and Laumon help make progress on various classical questions from analytic number theory The last article by Andrew V Sutherland introduces Sato Tate groups and explores their relationship with Galois representations motivic L functions and Mumford Tate groups
