Mathematical Problems In The Biological Sciences Pb 1973:

Phenomenological Aspects of Wittgenstein's Philosophy B.-C. Park, 2012-12-06 In his writings around 1930

Wittgenstein relates his philosophy in different ways to the idea of phenomenology. He indicates that his main philosophical project had earlier been the construction of a purely phenomenological language and even after having given up this project he believed that the world we live in is the world of sense data, that is of phenomenological objects. However, a problem is posed by the fact that he does not appear ever to have given a full explicit account of what he means by his phenomenology, phenomenological language or phenomenological problems. In this book I have tried to unravel the nature of Wittgenstein's phenomenology and to examine its importance for his entire work in philosophy. Phenomenology can be characterized as philosophy whose primary concern is what is immediately given in one's experience. This immediately given is not merely impressions inside one's mind but includes also the part of objective reality that impinges upon one's consciousness. Thus an aim of phenomenological enterprise is to grasp this objective reality by attending to immediate experience. Husserl's phenomenology is in fact a case in point.

Structures in Science Theo A.F. Kuipers, 2012-12-06 Although there is an abundance of highly specialized monographs, learned collections and general introductions to the philosophy of science, only a few 25 years synthetic monographs and advanced textbooks have appeared in the last. The philosophy of science seems to have lost its self-confidence. The main reason for such a loss is that the traditional analytical logical empiricist approaches to the philosophy of science had to make a number of concessions especially in response to the work of Popper, Kuhn and Lakatos. With *Structures in Science* I intend to present both a synthetic monograph and an advanced textbook that accommodates and integrates the insight of these philosophers in what I like to call a neo-classical approach. The resulting monograph elaborates several important topics from one or more perspectives by distinguishing various kinds of research programs and various ways of explaining and reducing laws and concepts and by summarizing an integrated explication presented in *From Instrumentalism to Constructive Realism*. ICR of the notions of confirmation, empirical progress and truth approximation.

(Over)Interpreting Wittgenstein A. Biletzki, 2012-09-14 *Over Interpreting Wittgenstein* will be read by philosophers investigating Wittgenstein and by scholars, interpreters, students and specialists in both analytic and continental philosophy. It will intrigue readers interested in issues of interpretation and cultural studies. This book tells the story as yet untold of Wittgenstein interpretation during the past eighty years. It provides different interpretations, chronologies, developments and controversies. It aims to discover the socio-cultural rather than psychological motives and motivations behind the philosophical community's project of interpreting Wittgenstein. As a cultural history of ideas it traces the parallelism between Wittgenstein interpretation and the move from metaphysics to language to postmodernism effected in the twentieth century.

A Boole Anthology James Gasser, 2013-11-11 Modern mathematical logic would not exist without the analytical tools first developed by George Boole in *The Mathematical Analysis of Logic* and *The Laws of Thought*. The

influence of the Boolean school on the development of logic always recognised but long underestimated has recently become a major research topic This collection is the first anthology of works on Boole It contains two works published in 1865 the year of Boole's death but never reprinted as well as several classic studies of recent decades and ten original contributions appearing here for the first time From the programme of the English Algebraic School to Boole's use of operator methods from the problem of interpretability to that of psychologism a full range of issues is covered The Boole Anthology is indispensable to Boole studies and will remain so for years to come *Scientific and Technical Aerospace Reports* ,1976

Probability Theory Vincent F. Hendricks, Stig Andur Pedersen, Klaus Frovin Jørgensen, 2001-06-30 A collection of papers presented at the conference on Probability Theory Philosophy Recent History and Relations to Science University of Roskilde Denmark September 16-18 1998 Since the measure theoretical definition of probability was proposed by Kolmogorov probability theory has developed into a mature mathematical theory It is today a fruitful field of mathematics that has important applications in philosophy science engineering and many other areas The measure theoretical definition of probability and its axioms however are not without their problems some of them even puzzled Kolmogorov This book sheds light on some recent discussions of the problems in probability theory and their history analysing their philosophical and mathematical significance and the role of mathematical probability theory in other sciences **Nuclear Science Abstracts**

,1975 **The Dynamics of Thought** Peter Gardenfors, 2005-07 This volume is a collection of some of the most important philosophical papers by Peter Gardenfors Spanning a period of more than 20 years of his research they cover a wide ground of topics from early works on decision theory belief revision and nonmonotonic logic to more recent work on conceptual spaces inductive reasoning semantics and the evolutions of thinking Many of the papers have only been published in places that are difficult to access The common theme of all the papers is the dynamics of thought Several of the papers have become minor classics and the volume bears witness of the wide scope of Gardenfors' research and of his crisp and often witty style of writing The volume will be of interest to researchers in philosophy and other cognitive sciences Philosophical Lectures on

Probability Bruno de Finetti, 2008-05-20 Bruno de Finetti 1906-1985 is the founder of the subjective interpretation of probability together with the British philosopher Frank Plumpton Ramsey His related notion of exchangeability revolutionized the statistical methodology This book based on a course held in 1979 explains in a language accessible also to non-mathematicians the fundamental tenets and implications of subjectivism according to which the probability of any well specified fact F refers to the degree of belief actually held by someone on the ground of her whole knowledge on the truth of the assertion that F obtains *Index of Conference Proceedings Received* British Library. Lending Division, 1978 The Limits of Logical Empiricism Arthur Pap, 2006-03-02 This volume collects some of the most significant papers of Arthur Pap Pap's work played an important role in the development of the analytic tradition This goes beyond the merely historical fact of Pap's influential views of dispositional and modal concepts Pap's writings in philosophy of science modality and philosophy

of mathematics provide insightful alternative perspectives on philosophical problems of current interest *Collected Papers of Stig Kanger with Essays on his Life and Work* Ghita Holmström-Hintikka, Sten Lindström, R. Sliwinski, 2012-12-06 Stig Kanger 1924 1988 made important contributions to logic and formal philosophy Kanger's dissertation *Provability in Logic* 1957 contained significant results in proof theory as well as the first fully worked out model theoretic interpretation of quantified modal logic It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic Kanger's most original achievements were in the areas of general proof theory the semantics of modal and deontic logic and the logical analysis of the concept of rights He also contributed to action theory preference logic and the theory of measurement This is the first of two volumes dedicated to the work of Stig Kanger The present volume is a complete collection of Kanger's philosophical papers The second volume contains critical essays on Kanger's work as well as biographical essays on Kanger written by colleagues and friends *The Dawn of Cognitive Science* L. Albertazzi, 2013-04-17 Current debate in cognitive science from robotics to analysis of vision deals with problems like the perception of form the structure and formation of mental images and their modelling the ecological development of artificial intelligence and cognitive analysis of natural language It focuses in particular on the presence of a hierarchy of intellectual constructions in different formats of representation These diverse approaches which share a common assumption of the inner nature of representation call for a new epistemology even a new psychophysics based on a theory of reference which is intrinsically cognitive As a contribution to contemporary research the reading presents the core of theories developed in Central Europe between the late nineteenth and early twentieth centuries by philosophers physicists psychologists and semanticists who shared a dynamic approach and a pronounced concern with problems of interaction and dependence These theories offer innovative solutions to some of the epistemological and philosophical problems currently at the centre of debate like part whole theory of relations and conceptual and linguistic categorization *The American Mathematical Monthly* ,1977 Includes articles as well as notes and other features about mathematics and the profession *Explanation* Giora Hon, Sam S. Rakover, 2013-04-17 For some years we have been conducting at the University of Haifa an interdisciplinary seminar on explanation in philosophy and psychology We habitually begin the seminar with some philosophical reflections on explanation an analysis of the concept and its metaphysical underpinnings We discuss the various models and proceed to examine explanation in the setting of psychology Thus from the outset we have focused not only on the concept itself but also on its application The objective that we have set for the seminar attended by students from both departments Philosophy and Psychology has been a critical understanding of the concept of explanation its use and limitations We were keen on deepening our understanding of the concept and on exploring its applications in fields of knowledge other than psychology This was the motivation for convening an international conference on explanation and its application The conference took place in the spring of 1998 under the auspices of the University of Haifa The present book is the fruit of this meeting The

reader should note that the second part of the Introduction presents a detailed analytical account of the book We hope that this overview will facilitate efficient use of the book by directing the reader's attention to those issues that might be of interest to him or her

Formal Ontology and Conceptual Realism Nino B. Cocchiarella, 2007-09-05 Theories about the ontological structure of the world have generally been described in informal intuitive terms This book offers an account of the general features and methodology of formal ontology The book defends conceptual realism as the best system to adopt based on a logic of natural kinds By formally reconstructing an intuitive informal ontological scheme as a formal ontology we can better determine the consistency and adequacy of that scheme

Brouwer meets Husserl Mark van Atten, 2006-11-08 Can the straight line be analysed mathematically such that it does not fall apart into a set of discrete points as is usually done but through which its fundamental continuity is lost And are there objects of pure mathematics that can change through time Mathematician and philosopher L E J Brouwer argued that the two questions are closely related and that the answer to both is yes To this end he introduced a new kind of object into mathematics the choice sequence But other mathematicians and philosophers have been voicing objections to choice sequences from the start This book aims to provide a sound philosophical basis for Brouwer's choice sequences by subjecting them to a phenomenological critique in the style of the later Husserl

Intensionality and Truth Philip Hugly, C. Sayward, 2012-12-06 Prior's view on intensionality and truth is based on the principle that sentences never name that what sentences say cannot be otherwise signified that a sentence says what it says whatever the type of its occurrence and that sentential quantification is neither eliminable substitutional nor referential The text defends each of these principles

Exogenous Factors in Colonic Carcinogenesis W. Scheppach, M. Scheurlen, 2003-01-31 This book is the proceedings of Falk Symposium 128 held in Würzburg Germany on May 2-3 2002 and dedicated to the important issue of colonic carcinogenesis and its underlying genetic and environmental factors Colorectal cancer is one of the leading causes of cancer related death in industrialized countries It has been recognized to be the consequence of a dynamic process leading from hyperproliferative epithelium through different classes of adenomas to invasive carcinoma This adenoma carcinoma sequence has been characterized on a molecular basis Modern molecular biology has also helped to clarify the clustering of colorectal cancer within families a phenomenon that has been known to clinicians for a long time Thus the pathogenesis of the two distinct familial colon cancer syndromes FAP familial adenomatous polyposis and HNPCC hereditary non polyposis colorectal cancer is increasingly being understood Thereby an identification of affected people has become possible before the disease has manifested There is also convincing evidence that the pathogenesis of sporadic colonic cancer is modulated by environmental mainly nutritional factors Carcinogens seem to be far less important than the components of the normal human diet It is likely that the interplay between protective and noxious dietary compounds determines the progression of the adenoma carcinoma sequence Additionally a broad spectrum of drugs has been shown to affect colonic tumorigenesis which provides the rationale for chemoprevention strategies These

issues set the scene for discussions on how genetic and environmental factors may interact in the pathogenesis of colonic cancer contributing fresh ideas to the prevention of this most prevalent malignancy in the industrialized world

Theoretical Knowledge Vyacheslav S. Stepin, 2005-11-13 In *Theoretical Knowledge* an original conception of a structure and dynamics of scientific knowledge is proposed A detailed analysis of the foundations of science performed by the author allowed him to develop new ideas and approaches to demonstrate how sociocultural factors are incorporated in the process of yielding of new theories He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures The investigation is based on the extensive literature on the history of natural and social sciences The reader will find in the book authentic historical reconstructions of the processes of the development of classical and quantum electrodynamics relativity and conceptions of evolution in biology
